Modern Nuclear Physics

From Fundamentals to Frontiers

Contents

1	Concepts of Quantum Mechanics from a Nuclear Physics	
	Viewpoint	1
1.1	Genesis of Quantum Physics	1
1.2	Spin and Isospin Quantum Numbers	6
1.2.1	The Spin	6
1.2.2	The Stern–Gerlach Experiment	8
1.2.3	The Isospin	11
1.3	Quantum Entanglement	13
1.4	The Schrödinger Equation and Its Physical Meaning	18
1.5	Solving the Schrödinger Equation in One Dimension	20
1.6	Quantum Tunnelling and Probability of Wave Function	24
1.7	Uncertainty Relation	29
1.8	The Dirac Equation	32
1.8.1	Relativistic Kinematics and Dirac Equation	32
1.8.2	Continuity Equation of Dirac Wave Function	34
1.8.3	Negative Energy and Spin of the Dirac Wave Function	35
1.8.4	Spin of Dirac Particle	39
1.9	Symmetries and Symmetry Breaking in the Nucleus	40
1.9.1	Explicit and Spontaneous Symmetry Breaking	40
1.9.2	The Chiral Symmetry of QCD	41
	References	51
2	Nuclear Forces	53
2.1	Fundamental Interactions	53
2.2	Energy Resolution and Effective Theories	57
2.3	Nuclear Forces	58
2.4	Meson Theory for Nucleon-Nucleon Interactions	62
2.5	NN Potentials and Phase Shifts	64
2.5.1	Symmetry Requirement on NN Interactions	70
2.6	Many-Body Interactions	72

2.7	QCD and Chiral Effective Field Theory (ChEFT)	75
2.7.1	QCD and NN Interaction	75
2.7.2	Chirality	75
2.7.3	ChEFT and NN and Many-Body Interactions	78
	References	92
3	Nuclear Structure Theory	93
3.1	Preamble	93
3.2	A Bird's-Eye View of Nuclear Theory	94
3.3	The Deuteron	98
3.4	Effective Interactions for Nuclear Many-Body Problems	101
3.5	Nuclear Mean Field	103
3.5.1	Slater Determinant and the Second Quantization	103
3.5.2	The Mean-Field Potential	104
3.6	Energy Density Functionals (EDF)	107
3.6.1	Hartree-Fock Models	110
3.6.2	Relativistic Mean Field (RMF) Model	113
3.6.3	Pairing Interactions and BCS/Bogolyubov Approximation	116
3.6.4	Tamm-Dancoff and Random Phase Approximations	122
3.7	Beyond the Mean Field Approaches	129
3.7.1	Particle-Vibration Coupling (PVC) Model	129
3.7.2	Second RPA	135
3.7.3	Generator Coordinate Method (GCM)	136
3.8	Many-Body Shell Model Wave Function	139
3.9	The Monte Carlo and No-Core Shell Models	145
3.9.1	Shell Model Monte Carlo (SMMC)	145
3.10	Anti-symmetrized Molecular Dynamics and Fermionic Molecular Dynamics	149
3.11	Ab Initio Approaches	152
3.11.1	Unitary Correlation Operator Method (UCOM)	153
3.11.2	Similarity Renormalization Group (SRG)	156
3.11.3	No-Core Shell Model (NCSM)	159
3.11.4	Variational Monte Carlo (VMC) and Green's Function Monte Carlo (GFMC) Approaches	163
3.11.5	Coupled Cluster Method	166
3.11.6	Self-consistent Green's Function (SCGF) Approach	169
3.11.7	Nuclear Lattice Effective Field Theory (NLEFT) Simulation	172
