

Fernando Concha A. · Juan Luis Bouso A.

Fluid Mechanics
Fundamentals
of Hydrocyclones and Its
Applications in the Mining
Industry

Contents

1	Introduction	1
1.1	Hydrocyclones	3
1.2	Hydrocyclone Applications	4
	References	8
2	Classification Fundamentals	9
2.1	Concentration Measures	9
2.2	Variables that Affect Hydrocyclone Behavior	10
2.2.1	Design Variables	10
2.3	Material Parameter	12
2.3.1	Mass Balance	12
2.3.2	Selectivity Function	13
2.3.3	Classification Function	15
2.3.4	Reduced Classification Function Equations	17
2.3.5	Fish-Hook	19
2.4	Operating Variables	23
2.4.1	Input Variables	23
2.4.2	Output Variables	25
2.5	Balance Adjustment	25
	References	33
3	Sedimentation of Particulate System	35
3.1	Hydrodynamic Force on a Sphere in Stokes Flow	36
3.2	Hydrodynamic Force on a Sphere in Euler's Flow	38
3.3	Prandtl's Flow	39
3.4	Sedimentation Velocity of a Sphere in Prandtl's Flow $1 < Re < 1.5 \times 10^{-5}$	40
3.5	Sedimentation of a Suspension of Spheres	43
3.6	Sedimentation of Particles of Arbitrary Shape	44
	References	47

4	Flow of Fluids in Circular Pipelines	49
4.1	Newtonian Fluid in Laminar and Turbulent Flow	49
4.2	Non-Newtonian Fluid Flows in Circular Pipelines	56
4.3	Critical Transport Velocity	63
	References	65
5	Flow Pattern in Hydrocyclones	67
5.1	Introduction	67
5.2	Fluid Dynamics Equations	72
5.3	Model Based on the Exact Solutions of the Reynolds Equation	76
5.4	Extreme Solutions	93
5.4.1	Euler's Inviscid Isochoric Models	93
5.5	Boundary Layer Models	98
5.6	Similarity Solution of Reynolds Equations	102
5.7	Asymptotic Solutions of the Reynolds Equations	105
5.8	Modeling the Air Core	107
5.9	Type of Hydrocyclone Discharge and Roping	114
	References	122
6	Numerical Models of Hydrocyclones	129
6.1	Introduction	129
6.2	Finite Element Method	132
6.3	Turbulence Modeling	135
6.3.1	Eddy Diffusivity Model (EDM)	135
6.3.2	A $k - \varepsilon$ Stress Model	136
6.3.3	$k - \varepsilon$ RNG Stress Model	140
6.3.4	Reynolds Stress Model	142
6.3.5	TFM Simulation	149
6.4	Additional Experimental Measurements	153
	References	156
7	Phenomenological Hydrocyclone Models	159
7.1	Equilibrium Orbit Model	161
7.2	Flow Pattern in a Hydrocyclone	162
7.3	Phenomenological Model	163
7.4	Mathematical Model	167
7.4.1	Classification Function	168
7.4.2	Short Circuit to the Under Flow	170
7.4.3	Leakage to the Overflow	170
7.4.4	Selectivity Function	171
7.4.5	Separation Size	171
7.4.6	Capacity-Pressure Drop Relationship	172
7.5	HYDROSIM Simulator	172
	References	176

8	Hydrocyclone Design	179
8.1	Hydrocyclone as a Turbo Machine	179
8.1.1	Turbo Machine Design Criteria	180
8.1.2	Hydrocyclone Inlet Design	180
8.1.3	Pressure–volume Flow in a Hydrocyclone as a Turbo Machine	183
8.2	Industrial Application of the Design	184
8.3	Vortex Finder Length and Apex-to-Vortex Ratio	188
8.4	Cylinder Length and Cone Angle	190
8.5	Apex Design	194
	References	196
9	Hydrocyclone Selection	197
9.1	Arterburn Hydrocyclone Selection Model	197
9.2	Hydrocyclone Simulation Models	201
9.2.1	Lynch and Rao Simulation Model	206
9.2.2	Plitt Simulation Model	208
9.2.3	CYCLOSIM Hydrocyclone Simulator	210
9.2.4	Nagewararao's Model	213
	References	215
10	Hydrocyclone System Design	217
10.1	Hydrocyclone as an Element in Grinding-Classification System Design	217
10.1.1	Pulp Feeding Tank	217
10.1.2	Hydrocyclone Configuration	219
10.1.3	Construction Materials	220
10.1.4	Hydrocyclones and Connecting Pipes	220
10.2	Operating Conditions	223
10.3	Hydrocyclones and Distributors: Design and Instrumentation	225
10.4	Installation and Operation of Hydrocyclones and Batteries of Hydrocyclones	228
10.5	Operating Recommendations	234
	References	240
11	Instrumentation and Control	241
11.1	Feed Concentration Measurement	242
11.2	Underflow Concentration Measurement	243
11.2.1	Electrical Capacitance	244
11.2.2	Acoustic Sensor	245
11.2.3	Electrical Conductivity Tomography	245
11.2.4	Gravimetric Method	246
11.2.5	Image Analysis	247
11.2.6	Vibration Sensing	248
	References	251

12 Case Studies	253
12.1 Application of Cavex Hydrocyclones in the Mining Industry	253
12.1.1 Application of Cavex 650CVX13 Hydrocyclones at Placer Dome's La Coipa Gold Plant in Chile	253
12.1.2 Test of Cavex 400CVX10° Hydrocyclone at Minsur S.A., Puno, Perú	258
12.1.3 Evaluation of Cavex650CVX Hydrocyclone in the Ok Tedi Grinding Circuit in Papua New Guinea (PNG) [4]	259
12.1.4 ReCyclone at El Soldado Copper Mine in Chile	261
12.2 Hydrocyclone Optimization for the Chuquicama Division of Chile's Codelco	262
12.3 Optimization of Hydrocyclones for Brine Recovery in SQM SALAR	267
12.4 Special Types of Hydrocyclones	272
12.4.1 Grinding Circuits	272
12.4.2 Coarse Classification (Fractioning)	272
12.4.3 Desliming/Classification	273
12.4.4 Thickening	274
12.4.5 Classification/Thickening	275
12.4.6 Densifications with Hydrocyclones	275
12.4.7 Desliming Hydrocyclones	277
12.4.8 Degritting	278
12.5 Optimizing the Grinding-Classification Circuit at Pucobre S. A.'s Medium-Sized San José Copper Concentrator	278
12.6 Economic Cost of Roping in Hydrocyclones: Evaluation of the Performance of the PST Instrument in Minera Escondida's Laguna Seca Plant, Chile	280
12.7 Hydrocyclones in Industrial Minerals and Other Industries	284
12.7.1 Fine Silica Grinding for Fiber Cement Manufacturing	284
12.7.2 Desliming, Classification and Refining of Silica Sand and Kaolin	286
12.7.3 Desliming and Classification of Silica Sand for Fracking	287
12.7.4 Quartz Sand Washing and Classification for Glass Production	287
12.7.5 Washing and Desliming of Sand for Construction and Fine Sand Recovery	288
12.7.6 Desliming and Classification of Dredging Sand	289
12.7.7 Heating Oil Degritting	290
12.7.8 Alumina Classification	290
12.7.9 Wolfram Mineral Ore Treatment	292
12.7.10 Complex Sulphides, Cu, Pb, Zn, Closed Grinding Circuit	292

12.7.11 Phosphate Classification	293
12.7.12 Gold Process	295
References	296
