Contents

Contributors	xi
Foreword	xv
Preface	xvii
1 Heating issues in wide-bandgap semiconductor devices	1
<i>Joseph A. Spencer, Alyssa L. Mock, and Yuhao Zhang</i>	
1.1 Heat generation during device operation	1
1.2 The impact of heat on device characteristics and operation	4
1.3 Management of heating issues in wide-bandgap semiconductor devices	9
1.4 Summary	16
Acknowledgments	17
References	17
2 First principles thermal transport modeling in GaN and related materials	21
<i>Lucas Lindsay</i>	
2.1 Introduction	21
2.2 Mechanics of modeling	22
2.3 Application to gallium nitride and related materials	33
2.4 Summary	36
Acknowledgments	37
References	37
3 Heat transport in polycrystalline diamond from the <i>meso</i> to the <i>nano</i> scale	45
<i>Aditya Sood</i>	
3.1 Introduction	45
3.2 Heat conduction at the mesoscale: Ensemble averaged properties	46
3.3 Phonon transport at the nanoscale: Suppression of thermal conductivity near grain boundaries	56
3.4 Conclusions and outlook	63
Acknowledgments	64
References	64

4	Fundamental understanding of thermal transport across solid interfaces	69
	<i>Zhe Cheng, Jingjing Shi, and Samuel Graham</i>	
4.1	Introduction	69
4.2	Thermal transport across harmonic-matched interfaces	73
4.3	Inelastic contribution to TBC	75
4.4	Effects of interfacial bonding to TBC	76
4.5	Comparison of TBC modeling methods	76
	Acknowledgments	78
	References	78
5	Upper limits to thermal conductance across gallium nitride interfaces: Predictions and measurements	83
	<i>David H. Olson, Ashutosh Giri, John A. Tomko, John T. Gaskins, Habib Ahmad, W. Alan Doolittle, and Patrick E. Hopkins</i>	
5.1	Introduction	83
5.2	Theoretical upper limits to thermal boundary conductance across GaN interfaces	85
5.3	Experimentally measured high thermal boundary conductance across ZnO/GaN interfaces	88
5.4	Steady state thermoreflectance (SSTR) as a novel metrology to measure the thermal conductivity of thin films and interfaces: Example for GaN	93
	Acknowledgments	96
	References	97
6	AlGaN/GaN HEMT device physics and electrothermal modeling	103
	<i>Bikramjit Chatterjee, Daniel Shoemaker, Hiu-Yung Wong, and Sukwon Choi</i>	
6.1	Introduction	103
6.2	AlGaN/GaN HEMT	103
6.3	2D TCAD model	111
6.4	3D FEA thermal model	141
6.5	Summary	146
	Appendix	147
	References	160
7	Modeling of thermal phenomena in GaN devices	165
	<i>M.G. Ancona</i>	
7.1	Introduction	165
7.2	Linear thermoelectroelasticity	167
7.3	Thermal simulation of III-N HEMTs in 2D	170
7.4	2D versus 3D thermal simulations of GaN HEMTs	171
7.5	Improved heat sinking using CVD diamond	174

7.6	Electrothermomechanical simulations of GaN HEMTs	179
7.7	Final remarks	181
	Acknowledgment	182
	References	182
8	Device-level modeling and simulation of AlGaN/GaN HEMTs	185
	<i>Eric Heller</i>	
8.1	Introduction	185
8.2	Section 1: New or accentuated physics	186
8.3	Section 2: Modeling ramifications of aging	190
8.4	Section 3: Other important considerations	191
8.5	Section 4: Miscellaneous simulation tips and tricks	195
8.6	Conclusion	197
	References	197
9	Gate resistance thermometry: An electrical thermal characterization technique	201
	<i>Georges Pavlidis, Brian Foley, and Samuel Graham</i>	
9.1	Introduction	201
9.2	Steady-state analysis	202
9.3	Transient analysis	209
9.4	Under RF operation	215
9.5	Conclusions	217
	References	217
10	Thermal characteristics of superlattice castellated FETs	223
	<i>Callum Middleton, Josephine Chang, Codie Mishler, Robert Howell, and Martin Kuball</i>	
10.1	Superlattice castellated field effect transistor	223
10.2	Thermal transport in SLCFETs	223
10.3	Reducing peak temperature in SLCFETs	228
10.4	Conclusion	229
	References	230
11	The transient thermoreflectance approach for high-resolution temperature mapping of GaN devices	231
	<i>Peter E. Raad, Pavel L. Komarov, and Travis L. Sandy</i>	
11.1	Introduction	231
11.2	The methods and the physics behind them	232
11.3	Results	241
11.4	Closing observations	248
	Acknowledgments	249
	References	249

12 Fundamentals of CTE-matched QST® substrate technology	251
<i>Vladimir Odnoblyudov, Ozgur Aktas, and Cem Basceri</i>	
12.1 Introduction	251
12.2 QST structure	252
12.3 QST thermal conductivity and the thermal resistance of the QST stack	253
12.4 GaN epitaxy on QST	254
12.5 Power devices	260
12.6 RF devices	267
Acknowledgments	271
References	274
13 Reduced-stress nanocrystalline diamond films for heat spreading in electronic devices	275
<i>Tatyana I. Feygelson, Marko J. Tadjer, Karl D. Hobart, Travis J. Anderson, and Bradford B. Pate</i>	
13.1 Introduction	275
13.2 Nanocrystalline diamond chemical vapor deposition	276
13.3 Optimization of stress in nanocrystalline diamond thin films	284
13.4 Discussion and summary	290
Acknowledgments	290
References	291
14 GaN-on-diamond materials and device technology: A review	295
<i>Daniel Francis and Martin Kuball</i>	
14.1 Introduction	295
14.2 Why GaN-on-diamond?	295
14.3 Methods for making GaN-on-diamond	300
14.4 Manufacturability	306
14.5 Thermal and stress characterization	312
14.6 Electrical and mechanical characterization	318
14.7 Conclusion	326
References	326
15 Three-dimensional integration of diamond and GaN	333
<i>Edwin L. Piner and Mark W. Holtz</i>	
15.1 Introduction	333
15.2 Self-heating in AlGaN-based HEMTs and thermal limitations	334
15.3 Challenges in growing III-nitrides on polycrystalline CVD diamond	335
15.4 Challenges of direct growth of diamond on GaN	338

15.5	Direct GaN–diamond integration	339
15.6	Summary	353
	Acknowledgments	354
	References	354
16	Room-temperature bonded thermally conductive semiconductor interfaces	359
	<i>Zhe Cheng and Samuel Graham</i>	
16.1	Introduction	359
16.2	Thermal measurement techniques	360
16.3	Thermal conductivity of bulk GaN and thin films	360
16.4	A summary of TBC of GaN–SiC and GaN–diamond interfaces	362
16.5	Surface-activated bonding technique	364
16.6	Thermal conductance of bonded interfaces	367
	Acknowledgments	374
	References	374
17	Direct low-temperature bonding of AlGaN/GaN thin film devices onto diamond substrates	379
	<i>Thomas Gerner and Volker Cimalla</i>	
17.1	Introduction	379
17.2	GaN-on-diamond technologies	380
17.3	Low-temperature bonding by hydrolysis-assisted solidification	383
17.4	Thermal resistance of the bonding layer	389
17.5	3 GHz RF-performance of GaN transistors on diamond	395
17.6	Summary	401
	References	402
18	Microfluidic cooling for GaN electronic devices	407
	<i>Remco van Erp and Elison Matioli</i>	
18.1	Introduction	407
18.2	Fundamentals of microfluidic cooling	409
18.3	Levels of integration in microfluidic cooling	419
18.4	Conclusions	435
	References	436
19	Thermal effects in Ga₂O₃ rectifiers and MOSFETs borrowing from GaN	441
	<i>Minghan Xian, Fan Ren, Marko J. Tadjer, Ribhu Sharma, Mark E. Law, Peter E. Raad, Pavel L. Komarov, Zahabul Islam, Aman Haque, and S.J. Pearton</i>	
19.1	Introduction	441

19.2	Review of current state-of-the art in thermal studies in Ga_2O_3	442
19.3	Vertical geometry rectifiers	446
19.4	Thermal management approaches for MOSFETs	455
19.5	Future prospects for Ga_2O_3 device cooling	455
	Acknowledgments	459
	References	459
	Index	469
