

François Trèves

Analytic Partial Differential Equations

 Springer

Contents

Part I Distributions and Analyticity in Euclidean Space

1	Functions and Differential Operators in Euclidean Space	3
1.1	Basic Notation and Terminology	3
1.2	Smooth, Real-analytic, Holomorphic Functions	6
1.3	Differential Operators with Smooth Coefficients	14
2	Distributions in Euclidean Space	17
2.1	Basics on Distributions in Euclidean Space	18
2.2	Sobolev Spaces	24
2.3	Distribution Kernels	28
2.4	Fundamental Solutions, Parametrix, Hypoelliptic PDOs	31
3	Analytic Tools in Distribution Theory	35
3.1	Analytic Parametrices, Analytic Hypoellipticity	36
3.2	Ehrenpreis' Cutoffs and Analytic Regularity of Distributions	38
3.3	Distribution Boundary Values of Holomorphic Functions	42
3.4	The FBI Transform of Distributions. An Introduction	51
3.5	The Analytic Wave-Front Set of a Distribution	57
4	Analyticity of Solutions of Linear PDEs. Basic Results	69
4.1	Analyticity of Solutions of Elliptic Linear PDEs	70
4.2	Degenerate Elliptic Equations. Influence of Lower Order Terms	80
4.3	A Generalization of the Harmonic Oscillator	97
4.A	Appendix: Hermite's Functions and the Schwartz Space	102
5	The Cauchy–Kovalevskaya Theorem	109
5.1	A Nonlinear Ovsyannikov Theorem	111
5.2	Application: the Nonlinear Cauchy–Kovalevskaya Theorem	120
5.3	Applications to Linear PDE	126
5.4	Application to Integrodifferential Cauchy Problems	136

Part II Hyperfunctions in Euclidean Space

6	Analytic Functionals in Euclidean Space	141
6.1	Analytic Functionals in Complex Domains	143
6.2	Analytic Functionals in \mathbb{C}^n	146
6.3	Analytic Functionals in \mathbb{R}^n as Cohomology Classes	154
7	Hyperfunctions in Euclidean Space	165
7.1	The Sheaf of Hyperfunctions in Euclidean Space	167
7.2	Boundary values of holomorphic functions in wedges	180
7.3	The FBI Transform of Analytic Functionals	184
7.4	Analytic Wave-front Set of a Hyperfunction	192
7.5	Edge of the Wedge	206
7.6	Microfunctions in Euclidean space	217
8	Hyperdifferential Operators	221
8.1	Action on Holomorphic Functions and on Hyperfunctions	222
8.2	Local Representation of Hyperfunctions	237
8.3	Elliptic Hyperdifferential Operators	242
8.4	Solvability of Constant Coefficients Hyperdifferential Equations ...	247

Part III Geometric Background

9	Elements of Differential Geometry	259
9.1	Regular Manifolds	259
9.2	Fibre Bundles, Vector Bundles	266
9.3	Tangent and Cotangent Bundles of a Manifold	271
9.4	Differential Complexes and Grassman Algebras	280
10	A Primer on Sheaf Cohomology	299
10.1	Basics on Sheaf Cohomology	299
10.2	Fine Sheaves and Fine Resolutions	308
10.3	Relative Sheaf Cohomology	312
10.4	Edge of the Wedge in (Co)homological Terms	322
11	Distributions and Hyperfunctions on a Manifold	327
11.1	Distributions and Currents on a Manifold	328
11.2	Plurisubharmonic functions and pseudoconvex domains	336
11.3	Hyperfunctions and Microfunctions in an Analytic Manifold	345
12	Lie Algebras of Vector Fields	351
12.1	The Lie Algebra of Smooth Vector Fields	352
12.2	Integral Manifolds. Frobenius' Theorem	354
12.3	Local Flow of a Regular Vector Field	361
12.4	Foliations Defined By Analytic Vector Fields	364
12.5	Systems of Vector Fields Generating Special Lie Algebras	368

13 Elements of Symplectic Geometry 375

13.1 Elements of Symplectic Algebra 376

13.2 The Metaplectic Group 388

13.3 Symplectic Manifolds 398

13.4 Involutive Systems of Functions of Principal Type 414

13.5 Real and Imaginary Symplectic Structures in \mathbb{C}^{2n} 429

13.6 Real and Imaginary Symplectic Structures on Complex Manifolds . 440

Part IV Stratification of Analytic Varieties and Division of Distributions by Analytic Functions

14 Analytic Stratifications 457

14.1 Analytic Stratifications and Stratifiable Sets 458

14.2 Analytic Subvarieties 462

14.3 The Weierstrass Theorems 471

14.4 Local Partitions of a Complex Hypersurface 483

14.5 Local Stratifications of a Real-Analytic Variety 493

14.6 Semianalytic Sets 506

15 Division of Distributions by Analytic Functions 513

15.1 The Lojasiewicz Inequality 514

15.2 Division of Distributions by Analytic Functions 526

15.3 Desingularization and Applications 548

15.A Appendix 555

Part V Analytic Pseudodifferential Operators and Fourier Integral Operators

16 Elementary Pseudodifferential Calculus in the C^∞ Class 565

16.1 Standard Pseudodifferential Operators 566

16.2 Symbolic Calculus 581

16.3 Classical symbols and classical pseudodifferential operators 595

16.4 The Weyl Calculus in Euclidean Space 603

17 Analytic Pseudodifferential Calculus 615

17.1 Analytic Pseudodifferential Operators 616

17.2 Symbolic Calculus 632

17.3 Analytic Microlocalization In Distribution Theory 657

17.4 Action on Singularity Hyperfunctions 668

17.5 Microdifferential Operators 683

18 Fourier Integral Operators 685

18.1 Fourier Distribution Kernels in Euclidean Space 686

18.2 The Lagrangian Manifold Associated to a Phase-function 698

18.3 Fourier Integral Operators. Basics 706

18.4 Reduction of the Fiber Variables 715

18.5 Composition and Continuity of Fourier Integral Operators 729

18.6 Globally Defined Fourier Integral Operators	746
18.7 Principles of Analytic Fourier Integral Operators	755
18.A Appendix: Stationary Phase Formal Expansion	757

Part VI Complex Microlocal Analysis

19 Classical Analytic Formalism	763
19.1 Formal Analytic Series	764
19.2 Classical Analytic Differential Operators of Infinite Order	776
19.3 The Complex Stationary Phase Formula	788
19.4 Symbolic Calculus and the KdV Hierarchy	802
20 Germ Fourier Integral Operators in Complex Space	825
20.1 Analytic Symbols	827
20.2 Contours and Function Spaces	834
20.3 Sjöstrand Pairs	841
20.4 Germ Fourier-like Transforms	855
20.5 Sjöstrand Triads and Germ Fourier Integral Operators	863
21 Germ Pseudodifferential Operators in Complex Space	871
21.1 Germ Pseudodifferential Operators	872
21.2 Classical Germ Pseudodifferential Operators	891
21.3 Action on distributions	902
21.4 Action on Hyperfunctions and Microfunctions	903
22 Germ FBI Transforms	915
22.1 Germ FBI Transforms	915
22.2 Germ FBI Transforms of Distributions	920
22.3 The Equivalence Theorem for Distributions	925

Part VII Analytic Pseudodifferential Operators of Principal Type

23 Analytic PDEs of Principal Type. Local Solvability	939
23.1 Pseudodifferential Operators of Principal Type	940
23.2 Local Solvability of Analytic PDEs of Principal Type	963
24 Analytic PDEs of Principal Type. Regularity of the Solutions	985
24.1 A New Concept: Subellipticity	986
24.2 Statement of the Main Theorem	992
24.3 Hypoellipticity Implies (\mathbf{Q})	993
24.4 Property (\mathbf{Q}) Implies Subellipticity	997
24.5 Analytic Hypoellipticity Implies (\mathbf{Q})	1030
24.6 Property (\mathbf{Q}) Implies Analytic Hypoellipticity	1033
24.7 The C^∞ Situation	1044
24.8 Propagation of Analytic Singularities	1048
24.A Appendix: Properties of Real Polynomials in a Single Variable	1057

24.B Appendix: Analytic Estimates of Exponential Amplitudes 1061

25 Solvability of Constant Vector Fields of Type (1,0) 1067

25.1 \mathbb{C} -Convexity and Global Solvability 1068

25.2 Local Solvability at the Boundary. First Steps 1079

25.3 Local Solvability at the Boundary. Final Characterization 1100

25.4 The Differential Complex. Generalities 1114

25.A Appendix: Minima of Families of Plurisubharmonic Functions 1120

26 Pseudodifferential Solvability and Property (Ψ) 1131

26.1 Solvability: the Difference between Differential and Pseudodifferential 1132

26.2 Property (Ψ) 1133

26.3 Microlocal Solvability in Distributions 1143

27 Pseudodifferential Complexes in Tube Structures 1159

27.1 Pseudodifferential Complexes of Principal Type 1160

27.2 Tube Pseudodifferential Complexes 1166

27.3 Phase-function and Amplitude 1170

27.4 Approximate Homotopy Formulas 1174

27.5 Homotopy Formulas 1184

27.6 Poincaré Lemmas 1190

References 1199
