Foreword xvii
Preface to the First Edition xix
Preface to the Second Edition xxi
Preface to the Third Edition xxiiii

CHAPTER 1
Introduction 1
References 5

CHAPTER 2
Principle of the Fiber-Optic Gyroscope 7
2.1 Sagnac-Laue Effect 7
2.1.1 A History of Optics from Aether to Relativity 7
2.1.2 Sagnac-Laue Effect in a Vacuum 8
2.1.3 Sagnac-Laue Effect in a Medium 13
2.2 Active and Passive Ring Resonators 16
2.2.1 Ring-Laser Gyroscope 16
2.2.2 Resonant Fiber-Optic Gyroscope 20
2.3 Passive Fiber-Ring Interferometer 21
2.3.1 Principle of the Interferometric Fiber-Optic Gyroscope 21
2.3.2 Theoretical Sensitivity of the I-FOG 23
2.3.3 Noise, Drift, and Scale Factor 27
2.3.4 ARW Versus Root PSD 29
2.3.5 Evaluation of Noise and Drift by Allan Variance (or Allan Deviation) 36
2.3.6 Allan Variance/Deviation Versus Standard Variance/Deviation 41
2.3.7 Bandwidth 45
2.3.8 Various Functions of a Gyro: Attitude Measurement, Gyro Compassing, and Inertial Navigation 45
References 48

CHAPTER 3
Reciprocity of a Fiber Ring Interferometer 51
3.1 Principle of Reciprocity 51
3.1.1 Single-Mode Reciprocity of Wave Propagation 51
3.1.2 Reciprocal Behavior of a Beam Splitter 52

3.2 Minimum Configuration of a Ring Fiber Interferometer 53
3.2.1 Reciprocal Configuration 53
3.2.2 Reciprocal Biasing Modulation-Demodulation 55
3.2.3 Proper (or Eigen) Frequency 59
3.3 Reciprocity with All-Guided Schemes 66
3.3.1 Evanescent-Field Coupler (or X-Coupler or Four-Port Coupler) 66
3.3.2 Y-Junction 68
3.3.3 All-Fiber Approach 72
3.3.4 Hybrid Architectures with Integrated Optics: Y-Coupler Configuration 74
3.4 Problem of Polarization Reciprocity 78
3.4.1 Rejection Requirement with Ordinary Single-Mode Fiber 78
3.4.2 Use of Polarization-Maintaining (PM) Fiber 80
3.4.3 Use of Depolarizer 81
3.4.4 Use of an Unpolarized Source 81
References 82

CHAPTER 4
Backreflection and Backscattering 85
4.1 Problem of Backreflection 85
4.1.1 Reduction of Backreflection with Slant Interfaces 85
4.1.2 Influence of Source Coherence 87
4.2 Problem of Backscattering 89
4.2.1 Coherent Backscattering 89
4.2.2 Use of a Broadband Source 89
4.2.3 Evaluation of the Residual Rayleigh Backscattering Noise 90
References 93

CHAPTER 5
Analysis of Polarization Nonreciprocities with Broadband Source and High-Birefringence Polarization-Maintaining Fiber 95
5.1 Depolarization Effect in High-Birefringence Polarization-Maintaining Fibers 95
5.2 Analysis of Polarization Nonreciprocities in a Fiber Gyroscope Using an All-Polarization-Maintaining Waveguide Configuration 99
5.2.1 Intensity-Type Effects 99
5.2.2 Comment About Length of Depolarization L_d Versus Length of Polarization Correlation L_{pc} 103
5.2.3 Amplitude-Type Effects 105
5.3 Use of a Depolarizer 109
5.4 Testing with Optical Coherence Domain Polarimetry (OCDP), or Today, Distributed Polarization Crosstalk Analysis (DPXA) 110
5.4.1 OCDP, or DPXA, Based on Path-Matched White-Light Interferometry 110

5.4.2 OCDP/DPXA Using Optical Spectrum Analysis 115
References 123

CHAPTER 6
Time-Transience Related Nonreciprocal Effects 125
6.1 Effect of Temperature Transience: The Shupe Effect 125
6.2 Symmetrical Windings 128
6.3 Strain-Induced T-Dot Effect 129
6.4 Basics of Heat Diffusion and Temporal Signature of the Shupe and T-Dot Effects 131
6.5 Case of a Sinusoidal Temperature Variation 136
6.6 Simple Model of Thermally-Induced Differential Strains in a Self-Standing Coil 138
6.6.1 Reminders About the Theory of Elasticity 138
6.6.2 Effect of the Fiber Coating 142
6.6.3 Simple Model of a Free-Standing Coil 144
6.7 Simple Viewing of Symmetrical Windings with the Thermally-Induced Differential Strains 152
6.8 Orthocyclic Winding for Hexagonal Close Packing 158
6.9 Effect of Acoustic Noise and Vibration 162
References 162

CHAPTER 7
Truly Nonreciprocal Effects 165
7.1 Magneto-Optic Faraday Effect 165
7.2 Axial Magneto-Optic Effect 170
7.3 Nonlinear Kerr Effect 174
References 178

CHAPTER 8
Scale Factor Linearity and Accuracy 181
8.1 Problem of Scale Factor Linearity and Accuracy 181
8.2 Closed-Loop Operation Methods to Linearize Scale Factor 182
8.2.1 Use of a Frequency Shift 182
8.2.2 Use of an Analog Phase Ramp (or Serrodyne Modulation) 184
8.2.3 Use of a Digital Phase Ramp 188
8.2.4 All-Digital Closed-Loop Processing Method 193
8.2.5 Control of the Gain of the Modulation Chain with "Four-State" Modulation 197
8.2.6 Potential Spurious Lock-In (or Deadband) Effect 201
8.3 Scale Factor Accuracy 202
8.3.1 Problem of Scale Factor Accuracy 202
8.3.2 Wavelength Dependence of an Interferometer Response with a Broadband Source 202
8.3.3 Effect of Phase Modulation 204

8.3.4 Wavelength Control Schemes 205
8.3.5 Mean Wavelength Change with a Parasitic Interferometer or Polarimeter 207
References 210

CHAPTER 9
Recapitulation of the Optimal Operating Conditions and Technologies of the I-FOG 213
9.1 Optimal Operating Conditions 213
9.2 Broadband Source 216
9.2.1 Superluminescent Diode 216
9.2.2 Rare-Earth Doped Fiber ASE Sources 218
9.2.3 Excess RIN Compensation Techniques 219
9.3 Sensing Coil 221
9.4 "Heart" of the Interferometer 222
9.5 Detector and Processing Electronics 222
9.6 Summary of the Various Noises 225
9.7 Thermal Phase Noise (Optical Nyquist Noise) 227
References 229

CHAPTER 10
Alternative Approaches for the I-FOG 231
10.1 Alternative Optical Configurations 231
10.1.1 Use of a [3 × 3] Coupler 231
10.1.2 Use of a Quarter-Wave Plate 232
10.1.3 Use of a Laser Diode 233
10.2 Alternative Signal Processing Schemes 233
10.2.1 Open-Loop Scheme with Use of Multiple Harmonics 233
10.2.2 Second Harmonic Feedback 233
10.2.3 Gated Phase Modulation Feedback 234
10.2.4 Heterodyne and Pseudo-Heterodyne Schemes 235
10.2.5 Beat Detection with Phase Ramp Feedback 236
10.2.6 Dual Phase Ramp Feedback 238
10.3 Extended Dynamic Range with Multiple Wavelength Source 239
References 239

CHAPTER 11
Resonant Fiber-Optic Gyroscope 241
11.1 Principle of Operation of an All-Fiber Ring Cavity 241
11.2 Signal Processing Method 244
11.3 Reciprocity of a Ring Fiber Cavity 247
11.3.1 Introduction 247
11.3.2 Basic Reciprocity Within the Ring Resonator 248
11.3.3 Excitation and Detection of Resonances in a Ring Resonator 251

11.4 Other Parasitic Effects in the R-FOG 256
Acknowledgment 259
References 259

CHAPTER 12
Conclusions 263
12.1 The State of Development and Expectations in 1993 263
12.2 The State of the Art, Two Decades Later, in 2014, for the Second Edition 264
12.2.1 FOG Versus RLG 264
12.2.2 FOG Manufacturers, in 2014 265
12.3 The State of the Art, Today, in 2021 266
12.4 Trends for the Future and Concluding Remarks 266
References 270

APPENDIX A
Fundamentals of Optics for the Fiber Gyroscope 273
A.1 Basic Parameters of an Optical Wave: Wavelength, Frequency, and Power 273
A.2 Spontaneous Emission, Stimulated Emission, and Related Noises 277
A.2.1 Fundamental Photon Noise 277
A.2.2 Spontaneous Emission and Excess Relative Intensity Noise 278
A.2.3 Resonant Stimulated Emission in a Laser Source 280
A.2.4 Amplified Spontaneous Emission 281
A.3 Propagation Equation in a Vacuum 282
A.4 State of Polarization of an Optical Wave 285
A.5 Propagation in a Dielectric Medium 288
A.5.1 Index of Refraction 288
A.5.2 Chromatic Dispersion, Group Velocity, and Group Velocity Dispersion 290
A.5.3 E and B, or E and H? 294
A.6 Dielectric Interface 296
A.6.1 Refraction, Partial Reflection, and Total Internal Reflection 296
A.6.2 Dielectric Planar Waveguidance 301
A.7 Geometrical Optics 302
A.7.1 Rays and Phase Fronts 302
A.7.2 Plane Mirror and Beam Splitter 303
A.7.3 Lenses 303
A.8 Interferences 305
A.8.1 Principle of Two-Wave Interferometry 305
A.8.2 Most Common Two-Wave Interferometers: Michelson and Mach-Zehnder Interferometers, Young Double-Slit 308
A.8.3 Channeled Spectral Response of a Two-Wave Interferometer 312
A.9 Multiple-Wave Interferences 314
A.9.1 Fabry-Perot Interferometer 314

A.9.2 Ring Resonant Cavity 318
A.9.3 Multilayer Dielectric Mirror and Bragg Reflector 318
A.9.4 Bulk-Optic Diffraction Grating 319
A.10 Diffraction 322
A.10.1 Fresnel Diffraction and Fraunhofer Diffraction 322
A.10.2 Knife-Edge Fresnel Diffraction 324
A.11 Gaussian Beam 325
A.12 Coherence 328
A.12.1 Basics of Coherence 328
A.12.2 Mathematical Derivation of Temporal Coherence 331
A.12.3 Concept of Wave Train 337
A.12.4 Case of an Asymmetrical Spectrum 337
A.12.5 Case of Propagation in a Dispersive Medium 340
A.13 Birefringence 341
A.13.1 Birefringence Index Difference 341
A.13.2 Change of Polarization with Birefringence 342
A.13.3 Interference with Birefringence 346
A.14 Optical Spectrum Analysis 347
Bibliography 348

APPENDIX B
Fundamentals of Fiber-Optics for the Fiber-Gyroscope 349
B.1 Main Characteristics of a Single-Mode Optical Fiber 349
B.1.1 Attenuation of a Silica Fiber 349
B.1.2 Gaussian Profile of the Fundamental Mode 350
B.1.3 Beat Length and h Parameter of a PM Fiber 354
B.1.4 Protective Coating 354
B.1.5 Temperature Dependence of Propagation in a PM Fiber 355
B.2 Discrete Modal Guidance in a Step-Index Fiber 356
B.3 Guidance in a Single-Mode Fiber 360
B.3.1 Amplitude Distribution of the Fundamental LP_{01} Mode 360
B.3.2 Effective Index n_{eff} and Phase Velocity v_ϕ of the Fundamental LP_{01} Mode 362
B.3.3 Group Index n_g of the Fundamental LP_{01} Mode 364
B.3.4 Case of a Parabolic Index Profile 365
B.3.5 Modes of a Few-Mode Fiber 365
B.4 Coupling in a Single-Mode Fiber and Its Loss Mechanisms 368
B.4.1 Free-Space Coupling 368
B.4.2 Misalignment Coupling Losses 368
B.4.3 Mode-Diameter Mismatch Loss of LP_{01} Mode 372
B.4.4 Mode Size Mismatch Loss of LP_{11} and LP_{21} Modes 373
B.5 Birefringence in a Single-Mode Fiber 375
B.5.1 Shape-Induced Linear Birefringence 375
B.5.2 Stress-Induced Linear and Circular Birefringence 376
B.5.3 Combination of Linear and Circular Birefringence Effects 378
B.6 Polarization-Maintaining Fibers 380
B.6.1 Principle of Conservation of Polarization 380

B.6.2 Residual Polarization Crossed-Coupling 383
B.6.3 Depolarization of Crossed-Coupling with a Broadband Source 386
B.6.4 Polarization Mode Dispersion 390
B.6.5 Polarizing Fiber 390
B.7 All-Fiber Components 392
B.7.1 Evanescent-Field Coupler and Wavelength Multiplexer 392
B.7.2 Piezoelectric Phase Modulator 395
B.7.3 Polarization Controller 396
B.7.4 Lyot Depolarizer 397
B.7.5 Fiber Bragg Grating 397
B.8 Pigtailed Bulk-Optic Components 399
B.8.1 General Principle 399
B.8.2 Optical Isolator 400
B.8.3 Optical Circulator 401
B.9 Rare-Earth–Doped Amplifying Fiber 401
B.10 Microstructured Optical Fiber 403
B.11 Nonlinear Effects in Optical Fibers 405
Bibliography 405

APPENDIX C
Fundamentals of Integrated Optics for the Fiber-Gyroscope 407
C.1 Principle and Basic Functions of $LiNbO_3$ Integrated Optics 407
C.1.1 Channel Waveguide 407
C.1.2 Coupling Between an Optical Fiber and an Integrated-Optic Waveguide 408
C.1.3 Fundamental Mode Profile and Equivalence with an LP_{11} Fiber Mode 409
C.1.4 Mismatch Coupling Attenuation Between a Fiber and a Waveguide 411
C.1.5 Low-Driving–Voltage Phase Modulator 412
C.1.6 Beam Splitting 413
C.1.7 Polarization Rejection and Birefringence-Induced Depolarization 414
C.2 Ti-Indiffused $LiNbO_3$ Integrated Optics 416
C.2.1 Ti-Indiffused Channel Waveguide 416
C.2.2 Phase Modulation and Metallic-Overlay Polarizer with Ti-Indiffused Waveguide 416
C.3 Proton-Exchanged $LiNbO_3$ Integrated Optics 420
C.3.1 Single-Polarization Propagation 420
C.3.2 Phase Modulation in Proton-Exchanged Waveguide 420
C.3.3 Theoretical Polarization Rejection of a Proton-Exchanged $LiNbO_3$ Circuit 422
C.3.4 Practical Polarization Rejection of Proton-Exchanged $LiNbO_3$ Circuit 423
C.3.5 Improved Polarization Rejection with Absorbing Grooves 425
C.3.6 Spurious Intensity Modulation 428
Bibliography 429

APPENDIX D

Electromagnetic Theory of the Relativistic Sagnac Effect 431

D.1 Special Relativity and Electromagnetism 431
D.2 Electromagnetism in a Rotating Frame 438
D.3 Case of a Rotating Toroidal Dielectric Waveguide 441
Bibliography 442

APPENDIX E

Basics of Inertial Navigation 445

E.1 Introduction 445
E.2 Inertial Sensors 447
E.2.1 Accelerometers (Acceleration Sensors) 447
E.2.2 Gyroscopes (Rotation-Rate Sensors) 447
E.2.3 Classification of Inertial Sensor Performance 448
E.3 Navigation Computation 449
E.3.1 A Bit of Geodesy 449
E.3.2 Reference Frames 449
E.3.3 Orientation, Velocity, and Position Computation 449
E.3.4 Altitude Computation 451
E.4 Attitude and Heading Initialization 451
E.4.1 Attitude Initialization 451
E.4.2 Heading Initialization 452
E.5 Velocity and Position Initialization 453
E.6 Orders of Magnitude to Remember 453
Bibliography 454

List of Abbreviations 455

List of Symbols 459
