

Inkjet Printing in Industry

Materials, Technologies, Systems, and Applications

Volume 2

Edited by Werner Zapka

WILEY-VCH

Volume 2

Preface xxvii

Part VI Substrates 605

25	Glass Substrates for Industrial Inkjet Applications	607
	<i>Thomas Wiegel, Lutz Parthier, and Ulrich Peuchert</i>	
25.1	Introduction – Glass a Universal Material	607
25.2	Glass Types and Main Characteristics	607
25.3	Manufacturing Process	608
25.3.1	Conventional Technology	608
25.3.2	Thin Glass Technology	608
25.4	Physical and Chemical Properties	609
25.4.1	Geometrical Properties	611
25.4.2	Enhanced Glass Strength	611
25.4.3	Glass Surface Properties	612
25.5	Surface Treatments	612

25.5.1	Determination of Surface Quality	612
25.5.2	Surface Treatment Methods to Clean a Surface	613
25.5.3	Surface Cleaning and Coating for Touchscreen Application	615
25.6	Glass Materials	616
25.6.1	Optical Glass	616
25.6.2	MEMpax® Thin Glass	617
25.6.3	Alkaline Free (AF) 32® eco Thin Glass	617
25.6.4	D 263® T eco Thin Glass	617
25.6.5	Alumino Silicate (AS) 87® eco Thin Glass	619
25.6.6	B 270® Ultra-White Glass	619
25.6.7	Glass Ceramic	619
25.6.8	Photosensitive Glass	620
25.7	Structuring	621
25.7.1	SCHOTT Flexinity®	621
25.7.2	Laser Structuring	622
	References	624
26	Coating Substrates to Match Ink Performance and Meet User Requirements	625
	<i>Patrick Le Galudec</i>	
26.1	Summary	625
26.2	Office Paper: The “Cinderella Story” of Inkjet	626
26.3	Films: From Office Overheads to Graphic Arts	631
26.4	Fine Art Paper: The Absolute Print Quality and More	634
26.4.1	What Might Change in the Future	635
26.5	Outdoor Sign and Display: Beyond the PVC/Solvent Ink Combination	636
26.5.1	What Might Come Next	637
26.6	Provisional Conclusion	637
	References	638
	Comprehensive Reference Books	639
27	Paper and Paper-Based Substrates for Industrial Inkjet Printing	641
	<i>Wolfgang A. Schmidt, Emanuele Martorana, and Michael Jocher</i>	
27.1	Definition of Paper	641
27.2	Properties of Paper	642
27.2.1	Bulk Properties	642
27.2.2	Wetting and Surface Properties	643
27.2.3	Porosity and Ink Penetration	644
27.2.4	Physico-Chemical Interaction of Inks with the Paper	644
27.3	Coated Paper, Coating Types, and Surface Properties	646
27.3.1	Porous Coatings	646
27.3.2	Film Forming Coatings	646
27.3.3	Laminates and Composites	647

- 27.4 Sublimation Papers – Technology, Application, and New Products 648
- 27.4.1 Product Design and Technology of Sublimation Papers 648
- 27.4.2 Application of Different Sublimation Papers 651
- 27.4.3 Future Developments and Innovations in the Market 652
- References 653

Part VII Metrology 655

28 Measurement of Complex Rheology and Jettability of Inkjet Inks 657

Tri Tuladhar

- 28.1 Introduction 657
- 28.2 Ink Flow Behavior 659
- 28.3 Bulk and Dynamic Ink Properties 660
- 28.3.1 Surface Tension 660
- 28.3.2 Viscoelasticity 661
- 28.3.3 Other Properties 662
- 28.4 Complex Rheology Characterization Tools at Jetting Conditions 662
- 28.4.1 Steady Shear Rheometers 663
- 28.4.2 High-Frequency Rheometers 663
- 28.4.3 Extensional Rheometers 665
- 28.5 Selective Selection of Additives to Optimize Complex Rheology During Ink Formulations 670
- 28.6 Correlation of Complex Rheology with Jetting Behavior 672
- 28.6.1 Continuous Inkjet (CIJ) 672
- 28.6.2 Drop-on-demand (DoD) Inks 673
- 28.7 Understanding Fluid Response in the Printhead During Jetting 677
- 28.7.1 Fluid Response in the Printhead Channel to Applied Waveform 677
- 28.7.2 TriPAV Step Strain Printhead Mode Analysis 679
- 28.7.3 Typical Fluid Response to TriPAV Step Strain Printhead Mode 682
- 28.7.4 Temperature Influence 683
- 28.7.5 Linking Step Strain Analyses to Waveform Features 684
- 28.8 Jetting of High-Viscosity Inkjet Inks 687
- 28.9 Conclusions 691
- References 691

29 Measurements of Inkjet Droplet Size, Velocity, and Angle of Trajectory 695

William D. Bachalo

- 29.1 Introduction 695
- 29.2 Droplet Measurements 697
- 29.2.1 Review of Optical Methods 697
- 29.2.2 Light Scattering Interferometry 698
- 29.2.3 Phase Doppler Interferometry – Measurement Principle 700
- 29.2.4 Calibration 706

29.2.5	Measurement Capabilities	707
29.2.6	Particles in Droplets	713
29.3	Summary	713
	References	714
30	Drop Watcher Technology and Print Quality Analysis	717
	<i>Yair Kipman, Paul Best, and Kyle Pucci</i>	
30.1	Importance of Inkjet Analysis and Analysis Equipment Standards	717
30.2	Optical Imaging Standards for Drop in Flight Analysis	718
30.2.1	Single Event	719
30.2.2	Short Strobe Pulse	719
30.2.3	Double Strobe	720
30.2.4	High Resolution, Low Distortion, Accurate Calibration	721
30.2.5	High-Precision Machine Vision Algorithms	721
30.3	Fundamental Drop in Flight Analysis	722
30.4	Detection and Analysis of Jetting Defects	724
30.4.1	Satellites/Mist	724
30.4.2	Wetting	724
30.4.3	Latency/Decap	726
30.4.4	Missing Jets/Sustainability	727
30.4.5	Frequency Sweep	728
30.4.6	Waveform Sweep	728
30.5	Combined Drop Watching and Printing	731
30.6	Measurement Methods for Print Quality	731
30.6.1	Line/Edge Quality	734
30.6.2	Inter-Color Bleed	734
30.6.3	Stretch/Skew	735
30.6.4	Dot Quality	735
30.6.5	Text Quality	736
30.7	Summary	736
	References	736
31	Automating Measurement Techniques for Product Development	739
	<i>James E. Holmes and Eleanor S. Betton</i>	
31.1	Introduction	739
31.2	Systems Engineering	740
31.3	Data Capture	743
31.4	Image Quality Assessment	745
31.4.1	Drop on Demand Image Quality Assessment	747
31.4.1.1	Single-Color Assessment	747
31.4.1.2	Ink-Substrate Assessment	748
31.4.1.3	Workflow Assessment	750
31.4.1.4	Automation	750
31.4.2	Continuous Inkjet Image Quality Assessment	752
31.4.2.1	Dot Quality	753

- 31.4.2.2 Dot Placement 753
- 31.4.2.3 Message Creation 754
- 31.4.2.4 Machine-Readable Codes 754
- 31.5 Summary 755
- References 756

- 32 Print Quality Control 757**
Ilias Trachanas
- 32.1 Print Quality Control 757
- 32.1.1 Introduction 757
- 32.1.2 Camera Calibration 758
- 32.1.3 Density Unevenness Measurement and Compensation 760
- 32.1.3.1 Density Unevenness Measurement 761
- 32.1.3.2 Density Unevenness Compensation 762
- 32.1.4 Malfunctioning Nozzle Detection and Compensation 763
- 32.1.4.1 Malfunctioning Nozzle Detection 763
- 32.1.4.2 Malfunctioning Nozzle Compensation 765
- 32.1.5 Conclusions 766
- List of Abbreviations 766
- References 767

- 33 UV Radiation Sources, UV Radiation Absorption, and UV Radiation Measurement 769**
Jürgen Baro and Christoph Fleckenstein
- 33.1 UV Radiation 769
- 33.1.1 Equivalence of Radiation and Energy 769
- 33.1.2 Electromagnetic Spectrum 771
- 33.1.3 Radiometric Terminology 772
- 33.2 UV Radiation Sources 774
- 33.2.1 Medium-Pressure Mercury Lamps 774
- 33.2.2 Doped Medium-Pressure Mercury Lamps 775
- 33.2.3 Excimer Lamps 776
- 33.2.4 UV LED Radiation Sources 778
- 33.3 UV Radiation Absorption 779
- 33.3.1 Beer-Lambert Law 779
- 33.3.2 Penetration Depth of UV Radiation 780
- 33.4 UV Radiation Measurement 786
- 33.4.1 Radiochromic Films 787
- 33.4.2 Filter Radiometers 790
- 33.4.3 Spectral Radiometers 793
- 33.5 Communication of Radiometric Data 795
- References 797

- 34 Online and Offline Testing of Printheads 801**
Herman Wijshoff
- 34.1 Introduction 801

- 34.2 Failure Mechanisms 802
 - 34.2.1 Introduction 802
 - 34.2.2 Meniscus Consistency 803
 - 34.2.3 Nozzle Plate Wetting 804
 - 34.2.4 Satellite Drops 806
 - 34.2.5 Air Bubbles 807
- 34.3 Sensing 807
 - 34.3.1 Introduction 807
 - 34.3.2 Acoustic Sensing, Paint 809
 - 34.3.3 Nozzle Sensing 810
 - 34.3.4 Impedance Spectroscopy 812
 - 34.3.5 Monitoring Droplet Formation 812
- 34.4 Feedforward Control 815
 - References 816

Part VIII Pre/post Processes 821

- 35 Overview UV Curing, Good Polymerization Process 823**
Mathias Theiler
 - 35.1 UV Curing Process 823
 - 35.2 Basic Curing Equation 824
 - 35.3 Nonlinear Polymerization Functionality of UV Curing Inks 825
 - 35.4 UV Power vs. Exposure Time 827
 - 35.5 Polymerization Grade 828
 - 35.6 Process Development of UV Curing Applications 829
 - 35.7 Migration and Setoff Reduction 834
 - 35.8 How to Get Validated UV Ink Applications 835
 - 35.9 Regulatory Affairs 836
 - 35.9.1 Definition of Migration, Setoff, Low Migration Inks, and the Printing Process 836
 - 35.9.1.1 Migration 836
 - 35.9.1.2 Setoff 836
 - 35.9.1.3 Low Migration Inks 837
 - 35.9.2 Legislation 837
 - 35.9.2.1 Migration Values 838
 - 35.9.2.2 Migration Limits 838
 - 35.9.2.3 Simulants for Migration Testing 839
 - 35.9.3 Packaging Systems 839
 - 35.9.3.1 Printing on Packaging Issues 839
 - 35.9.3.2 Considerations in the Printing Process 840
 - 35.9.4 Qualification Process for Low Migration Application 840
 - 35.9.5 GMP (Good Manufacturing Practice) 841
 - 35.9.5.1 Area of Application 841
 - 35.9.5.2 Implication 841
 - 35.9.5.3 Quality Management System 841

- 35.9.5.4 Who is Affected by GMP? 841
- 35.9.6 Conclusion 841
- References 842

- 36 Priming for Inkjet Printing on Textiles 845**
Enrico Sowade, Peter Oehme, and Andreas Schoenfeld
- 36.1 Introduction 845
- 36.2 Basics for Inkjet Printing on Textiles 846
- 36.3 Textile Inkjet Inks and Dye–Textile Interactions 848
- 36.4 Pretreatment/Priming for Digital Textile Printing 852
- 36.4.1 Reactive Inkjet Printing on Cotton Textiles 853
- 36.4.2 Acid Inkjet Printing on Polyamide, Silk, and Wool textiles 854
- 36.4.3 Disperse Dye Inkjet Printing on Polyester 855
- 36.4.4 Pigment Inkjet Printing for All Kinds of Textiles 856
- 36.5 Application Methods of Primers 861
- 36.6 Ecological Requirements for Primers in Textile Industry 862
- References 864

- 37 Pre- and Post-processes 867**
Dariusz Korzec, Corinna Little, Andrea Werkmann, and Eva Brandes
- 37.1 Plasma Treatment 867
- 37.1.1 Plasma Generation 868
- 37.1.1.1 Ionization in Gas 868
- 37.1.1.2 Inelastic Electronic Collisions 869
- 37.1.1.3 Influence of Pressure on Ignition 869
- 37.1.1.4 Formation of Plasma 870
- 37.1.1.5 Plasma Properties 871
- 37.1.1.6 Plasma – Surface Interaction 872
- 37.1.2 Plasma Classifications 873
- 37.1.2.1 Low- and High-Pressure Plasmas 873
- 37.1.2.2 Thermal and Nonthermal Plasma 874
- 37.1.2.3 Electropositive and Electronegative Plasmas 874
- 37.1.2.4 Methods of Electric Field Production 874
- 37.1.3 Cold Atmospheric Pressure Plasmas 875
- 37.1.3.1 Corona Discharge 875
- 37.1.3.2 Dielectric Barrier Discharges 876
- 37.1.4 Atmospheric Pressure Plasma Jets (APPJ) 877
- 37.1.4.1 DBD-Type APPJ 877
- 37.1.4.2 Corona Jet 878
- 37.1.4.3 Pulsed Atmospheric Arc APPJ 878
- 37.1.4.4 Piezoelectric Direct Discharge APPJ 880
- 37.1.4.5 Discharge Architecture for Wide Surface Treatment 880
- 37.1.5 Plasma Processes in Air 881
- 37.1.5.1 Positive and Negative Ions 882
- 37.1.5.2 Chemical Radicals in Air 882

- 37.1.5.3 Ozone Production 883
- 37.1.5.4 Volume Chemistry of Organic Molecules 885
- 37.1.6 Surface Treatment 885
 - 37.1.6.1 Removal of Organic Residue 885
 - 37.1.6.2 Reduction 885
 - 37.1.6.3 Coating 886
- 37.1.7 Surface Activation 887
 - 37.1.7.1 Visualization of the Activation Area 889
 - 37.1.7.2 Activation Rate 890
 - 37.1.7.3 Overtreatment 891
 - 37.1.7.4 Wetting Control 892
 - 37.1.7.5 Hydrophobic Recovery 893
- 37.1.8 Application Examples 895
 - 37.1.8.1 Marking and Coding 895
 - 37.1.8.2 Aerosol Jet Printing 895
 - 37.1.8.3 Inkjet Hybrid Printing Platform 896
- List of Abbreviations 897
- References 898

38 UV Lamps 909

Chris Beechey and David Johnson

- 38.1 What Is UV Light and How Does It Work? 909
 - 38.1.1 Electromagnetic Spectrum 909
 - 38.1.2 How UV Light Is Used to Cure UV Inks and Coatings 910
- 38.2 Advantages and Disadvantages of Using UV Chemistry 911
 - 38.2.1 UV Chemistry Advantages 911
 - 38.2.2 UV Chemistry Disadvantages 912
- 38.3 Methods of Generating UV 913
 - 38.3.1 Laser 913
 - 38.3.2 Microwave 914
 - 38.3.3 Arc Lamp 915
 - 38.3.4 Excimer 917
 - 38.3.5 Light-Emitting Diodes (LED) 918
- 38.4 UV Lamp System General Architecture 919
 - 38.4.1 Lamp 920
 - 38.4.2 Ballast 921
 - 38.4.3 Reflectors 922
 - 38.4.4 Cooling System 923
 - 38.4.5 Light Shielding 924
 - 38.4.6 Shutters 924
 - 38.4.7 Power and Control Cabling 926
- 38.5 UV Curing System Features 927
 - 38.5.1 Footprint 928
 - 38.5.2 High-Intensity Reflector System 928

- 38.5.3 Quick Change Cassette 928
- 38.5.4 Rapid Warm Up and Cooldown 930
- 38.5.5 Integrated Air-Cooling 930
- 38.5.6 Service Life 930
- 38.5.7 Arc Lamp Length 930
- 38.5.8 Nitrogen Inertion 931
- 38.6 Summary 932
- References 932

39 UV LED Ink Curing: UV LED Technology and Solutions for Integration into Industrial Inkjet Printing 933

Dirk Exner

- 39.1 What Is UV LED Curing? 933
- 39.2 UV LED Technology Components 933
 - 39.2.1 LEDs: The Base Building Block 934
 - 39.2.2 Array: Grouping of LEDs 935
 - 39.2.3 Cooling: Thermal Management 935
 - 39.2.4 Optics: Guiding the Light 937
- 39.3 Emission Spectrum 938
 - 39.3.1 UV-A 938
 - 39.3.2 UV-B and UV-C 939
- 39.4 Power Specifications 939
 - 39.4.1 Optical Power Specifications 939
 - 39.4.2 Peak Irradiance 939
 - 39.4.3 Power 940
 - 39.4.4 Dose 940
 - 39.4.5 Array Size, Number of Diodes, and Emitting Window Width 941
- 39.5 Material Formulation 943
- 39.6 UV LED Benefits 943
- 39.7 Markets and Applications 945
 - 39.7.1 Digital Inkjet, Screen, and Flexographic Printing 945
 - 39.7.2 Labels and Packaging 945
 - 39.7.3 Posters and Signage 945
 - 39.7.4 Coding and Marking 946
 - 39.7.5 Container Printing 946
 - 39.7.6 Braille Printing 946
 - 39.7.7 Decoration 946
 - 39.7.8 3D Printing 946
- 39.8 Integration Considerations 947
 - 39.8.1 Pinning 947
 - 39.8.2 Thermal Management and Aerodynamics 948
 - 39.8.3 Stray Light 948
- 39.9 Summary and Outlook 949
 - Further Reading 950

- 40 Das8. UV-Cured Supermatt Surfaces With Low Migration 951**
Reiner Mehnert
- 40.1 UV DirectCure 951
 - 40.1.1 Migration from EB- or UV-Cured Inks and Varnishes 951
 - 40.1.2 UV-DirectCure – the Acrylate Molecule As Internal Photoinitiator 954
 - 40.1.3 Migration from Cured Printing Inks and Varnishes – Comparison of EB-Curing and DirectCure 957
 - 40.1.3.1 Experimental 957
 - 40.1.3.2 Results and Discussion 958
 - 40.1.4 Migration from Post-irradiated Prints 961
 - 40.1.5 UV Technology Steps Toward Lower Migration 963
 - 40.1.6 Example of an Industrial DirectCure Unit 963
 - 40.1.7 Summary 964
 - 40.2 Supermatt Surfaces Generated by 172 nm Excimer-Curing of Acrylate Formulations 964
 - 40.2.1 Surface Curing Initiated by 172 nm Photons from a Xenon Excimer Source 964
 - 40.2.2 Surface Microfolding After 172 nm Excimer Curing 966
 - 40.2.3 The Xenon Excimer Lamps As Tool for Matting 966
 - 40.2.4 Combination of UV-Precuring and Excimer Matting As a Method to Generate Soft-Touch Surfaces 969
 - 40.2.5 Examples of Industrial Excimer Matting Units 971
