

Numerical Predictions of Deformation Processes and the Behaviour of Real Materials

Proceedings of the 15th Risø International Symposium
on Materials Science

5-9 September
1994

Editors

S.I. Andersen J.B. Bilde-Sørensen

T. Lorentzen O.B. Pedersen N.J. Sørensen

RISØ NATIONAL LABORATORY
ROSKILDE, DENMARK

Contents

Invited Papers:

Modelling and prediction of metal forming N. Bay, T. Wanheim, J. Danckert and K.B. Nielsen	1
Finite element modeling of polycrystalline solids P.R. Dawson, A.J. Beaudoin and K.K. Mathur	33
Polycrystal models to fit experiments U.F. Kocks and C.T. Necker	45
Methods for characterizing microstructures in order to relate to models K.J. Kurzydowski and B. Ralph	59
Micromechanical modeling and application to metal forming processes D. Muller, X. Lemoine and M. Berveiller	75
Modelling of the thermomechanical processing in hot rolling processes of steel industry C. Ouchi	87
The relevance of modelling to the industrial thermomechanical processing of aluminium alloys R.A. Ricks, R.K. Bolingbroke, R. Ørsund, J.L. Strid, R. Shahani and G.M. Raynaud	99
Microstructural modelling of industrial thermomechanical processing C.M. Sellars, F.J. Humphreys, E. Nes and D. Juul Jensen	109
Modelling and experiments on deformation and fracture in some advanced materials S. Suresh	135
On the inelastic behaviour of metal matrix composites N.J. Sørensen, N. Hansen and Y.L. Liu	149
Deconvolution of experimental data of aggregates using self-consistent polycrystal models C.N. Tomé, N. Christodoulou, R. Holt, C.H. Woo, R.A. Lebensohn and P.A. Turner	169
Numerical studies of the failure of materials V. Tvergaard	205

Contributed Papers:

Modelling of texture development in aluminium extrusion T. Aukrust, S. Tjøtta, I. Skauvik, H.E. Vatne and P. Van Houtte	219
The effect of strain hardening on R-value measurements A. Van Bael, J. Winters and P. Van Houtte	225
Modelling the effect of strain path change on strain localisation in sheet metal forming P.S. Bate	231
The microstructure and residual stresses of thermally sprayed ceramic coatings P. Bengtsson, T. Johannesson and J. Wigren	237
Interfacial shear strength of diamond-like carbon coating deposited on metals M.D. Bentzon, C. Barholm-Hansen and J. Bindslev Hansen	243
Flange thickness in a radial extruded tubular component - strain state texture and strain models H. Bjerregaard, C.B. Andersen, D. Juul Jensen and T. Wanheim	249
Simulation of an extrusion process by tension-torsion testing P. Brøndsted, B.S. Johanesen, V. Maegaard and P.S. Sørensen	255
Multi-grain modelling of hydrogen attack: Effect of random microstructural variations M.W.D. van der Burg and E. van der Giessen	263
Cohesive zone model for ductile fracture A. Cornec, H. Yuan and G. Lin	269
Deformation measurement at microstructural level by means of object grating method within SEM H.-A. Crostack and G. Fischer	275
A finite element analysis of the fatigue crack propagation C.S. da Costa Viana and C.V. Abreu	281
A comparison between predicted and experimental yield loci for zircaloy-4 C.S. da Costa Viana and L.P. Mendonca Brandao	287
Thermal cycling of whisker reinforced metal matrix composites - a comparison between finite element models and experimental results M.R. Daymond and P.J. Withers	293

Computer study of different component formation in rolling textures of cubic metals S.V. Divinski and V.N. Dnieprenko	299
A comparison of numerical predictions and experimental data for creep in short fibre reinforced aluminium alloys A. Dlouhy and G. Eggeler	307
Simulations of creep failure in polycrystals with random variations in microstructure and with curved grain boundaries E. van der Giessen and V. Tvergaard	313
Calculated and measured internal stresses of creep deformed single crystal nickel-based superalloys U. Glatzel and A. Müller	319
Flow stress and microstructural parameters N. Hansen	325
A model for on-line prediction of the hot deformation resistance for steel as a function of chemical composition and rolling schedule M. Hartwig and A.J. van den Hoogen	335
Prediction of "stress-strain" curve for zirconium alloys: Basic experimental facts and principles M. Isaenkova, Yu. Perlovich and S. Kapliy	343
Simulation and control of sheet metal forming A.P. Karafillis, J. Cao and M.C. Boyce	349
Influence of technological factors on the relationship between strength and plasticity of strips S.G. Khajutin, A.I. Kekalo, V.D. Kozhin, L.Ju. Luzhbina, M.Z. Pevzner and N.M. Shirokov	355
Modelling cyclic deformation textures with orientation flow fields H. Klein and H.J. Bunge	361
Modelling of the cyclic hardening behaviour of fcc metals W. Kleinert and C. Holste	369
Strain hardening in highly rolled sheets of copper and copper-base alloys: Modelling for the stress-strain calculation J. Kusnierz	375
Experimental and numerical determination of distortion of laser hardened steels C. Körner, K. Müller, J. Domes, R. Damaschek and H.W. Bergmann	381

Texture predictions including non-octahedral slip T. Leffers	387
Numerical prediction of dislocation densities generated in Si, GaAs and InP crystals grown from melt L.Y. Li, C.T. Tsai and C.S. Hartley	393
Interpretation of fracture experiments on intermetallics P. Lipetzky, A. Wanner, B. Schietinger and E. Arzt	399
A comparison of numerical predictions and <i>in-situ</i> neutron diffraction measurements of MMC phase response T. Lorentzen, N.J. Sørensen and Y.L. Liu	405
FEM simulation of sheet metal forming followed by fatigue loading A. Melander, A. Gustavsson and D.L. McDowell	413
Stress-state dependent deformation behaviour of fcc polycrystals M.P. Miller, D.L. McDowell	421
Primary recrystallization as a means to reveal deformation heterogeneity V. Yu. Novikov	427
Heterogeneous textures in hot rolled aluminium and their analysis using finite element modelling A. Oscarsson, W.B. Hutchinson, H.E. Ekström, A. Johnsson, P.S. Bate, J. Beynon and N. Le Mat	433
Numerical prediction of the hot-working behaviour of metals W. Pantleon, P. Klimanek	439
Development of strain hardening inhomogeneity during texture formation under rolling of bcc-metals Yu. Perlovich	445
Numerical modelling of frictional sliding in SiC/glass and SiC/SiC ceramic matrix composites P.W.M. Peters, E. Martin and J.M. Quenisset	451
Simulation of dislocation motion in the Ni-Base superalloy Nimonic PE16 T. Pretorius and D. Rönnpagel	457
Pass schedule optimization during cold-rolling of commercial twin roll cast aluminium alloys E.S. Puchi	463
Modelling microstructural evolution of commercial twin roll cast aluminium- iron-silicon alloys during annealing processes at industrial scale E.S Puchi, C. Villalobos and A. Pineiro	469

On the connection of Taylor models and dislocation dynamics D. Raabe	475
Experimental observation and modelling of local orientation gradients in rolled iron D. Raabe and J. Boeslau	481
Experimental investigation and modelling of the evolution of strength during deformation of a Cu-20%Nb in-situ composite D. Raabe and U. Hangen	487
Modelling and experimental investigation of grain rotations during hot compression of Ni ₃ Al polycrystals D. Raabe, D. Ponge and B. Stolz	493
Calculation of forming limit diagrams of an Al-Mg alloy taking texture into account P. Ratchev, P. Van Houtte, B. Verlinden, P. Neutjens and R. Baartman	499
Use of the finite element method for the interpretation of forging trials performed on aluminium metal matrix composite materials S.M. Roberts, P.J. Withers, S.J. Barnes and P.B. Prangnell	505
Modelling of stress-strain behaviour incorporating dynamic and metadynamic recrystallization C. Roucoules, P.D. Hodgson and B.A. Parker	511
Simulation of thermally activated dislocation glide D. Rönnpagel and V. Mohles	517
Modelling deformation processing of metals using a crystalline approach S. Salhi and J.C. Gelin	523
Modelling of rolling texture development in zirconium alloys tubes P.V. Sanchez, R.A. Lebensohn, M.I. Gonzalez, A.A. Pochettino	531
Thermoelastic martensitic transformation under combined stress- simulation and experiment P. Sittner and M. Tokuda	537
A Monte Carlo study on the nucleation and grain growth of a polycrystalline matrix P.V. Sivaprasad, K.P.N. Murthy, S. Venkadesan and S.L. Mannan	545
The numerical predictions of the features of deformation processes under compacting and extrusion of viscous compressible materials L.S. Stelmakh	551

The urgent problems of high-temperature rheodynamics in technology of power SHS-compacting of powder materials A.M. Stolin and A.G. Merzhanov	557
Rate dependent and network phenomena in the multiaxial drawing of PVC J. Sweeney and I.M. Ward	563
Computational method in composite materials: Effective medium theory vs. percolation theory M. Taya, M.L. Dunn and K. Ono	569
Internal fracture of metal matrix composites Y.H. Teng, Y.L. Liu and H. Lilholt	585
Prediction of tensile properties of hot-rolled steels using micromechanics approach Y. Tomota, T. Ohnuki and M. Umemoto	595
Constitutive equations for hot deformation of Al-Mg-Si alloys B. Verlinden and K. Voith	601
On the characterisation of finite strains and recrystallized grain size in metal forming T. Welo, K. Pedersen and O. Jensrud	607
Friction in the bearing channel of aluminium extrusion dies T. Welo, S. Abtahi, I. Skauvik, S. Støren, M. Melander and S. Tjøtta	615
A finite element approach to modelling the development of deformation textures in fcc metals M.J. Young, S.K. Choi and P.F. Thomson	621
The application of polycrystalline yield surfaces to the prediction of forming limit diagrams Y. Zhou, J. Savoie and J.J. Jonas	627
Industrial application of microstructural modelling for plate rolling and hot strip rolling G. Zouhar, R. Kost and F. Hirschmanner	635
Previous publications	641
Author index	643
