# Global Logarithmic Deformation Theory

 Springer

# Contents

<b>1</b>	<b>Introduction</b> .....	1
1.1	A Plan to Construct Calabi–Yau Manifolds.....	1
1.1.1	Calabi–Yau Varieties.....	1
1.1.2	Another Perspective on the Canonical Sheaf.....	2
1.1.3	Constructing Calabi–Yau Varieties.....	3
1.1.4	The Language of Algebraic Deformations.....	7
1.1.5	Analytic and Formal Analytic Deformations.....	9
1.1.6	Formal Analytic One-Parameter Normalings and Smoothings.....	11
1.1.7	Constructing a Formal Analytic One-Parameter Smoothing.....	14
1.2	Normal Crossing Schemes.....	15
1.2.1	The Stratification and the Dual Intersection Complex.....	17
1.2.2	The Dualizing Sheaf.....	18
1.3	Infinitesimal Deformations and Functors of Artin Rings.....	19
1.4	Deformation Theory of Smooth Varieties.....	20
1.4.1	Local Rigidity of Smooth Deformations.....	20
1.4.2	Infinitesimal Automorphisms.....	21
1.4.3	Dolbeault Resolutions.....	22
1.4.4	A DG Lie Algebra Controlling Defy.....	23
1.4.5	A Proof of the Bogomolov–Tian–Todorov Theorem.....	26
1.5	Semistable Smoothings.....	28
1.5.1	Restricting the Local Structure of Deformations.....	28
1.5.2	Criteria for Semistability.....	30
1.5.3	Computing $\mathcal{T}_Y^1$ .....	31
1.5.4	An Example of a Semistable Smoothing.....	32
1.5.5	The Semistable Deformation Functor.....	34
1.6	Logarithmic Algebraic Geometry.....	36
1.6.1	Logarithmic Structures.....	36
1.6.2	Integral and Saturated Log Structures.....	39
1.6.3	Fiber Products and Saturated Morphisms.....	39

1.6.4	Logarithmic Derivations and Differential Forms.....	40
1.6.5	Logarithmic Smoothness.....	40
1.6.6	Semistable Log Smooth Structures.....	44
1.6.7	Log Smooth Deformation Theory.....	45
1.6.8	The Logarithmic Bogomolov–Tian–Todorov Theorem....	48
1.6.9	Comparison Between Log Smooth Deformations and Semistable Deformations.....	49
1.6.10	Computation of $\mathcal{L}\mathcal{S}_V$ .....	49
1.7	Generically Log Smooth Families.....	50
1.7.1	Log Toroidal Families.....	53
1.7.2	From Degenerate Schemes to Generically Log Smooth Families.....	57
1.7.3	Deformations of Generically Log Smooth Families.....	58
1.8	Unobstructedness of the Logarithmic Deformation Functor.....	63
1.8.1	From DG Lie Algebras to Curved Lie Algebras.....	63
1.8.2	Construction of the Curved Lie Algebra.....	65
1.8.3	The Logarithmic Bogomolov–Tian–Todorov Theorem....	68
1.8.4	Smoothing Normal Crossing Schemes.....	74
1.8.5	Constancy of the Hodge Numbers.....	77
1.8.6	Comparison of the Local Moduli Spaces.....	78
1.9	Algebraic Smoothings over $\mathbb{C}[[t]]$ .....	82
1.9.1	Projective Deformations.....	82
1.9.2	Polarized Deformations.....	84
1.9.3	Unobstructedness of Pairs.....	85
1.10	Modifications of the Log Structure.....	88
1.11	Mirror Pairs and Toroidal Crossing Schemes.....	90
1.11.1	Batyrev’s Mirror Construction.....	91
1.11.2	The Batyrev Construction from the Perspective of the Smoothing Strategy.....	95
1.11.3	Toroidal Crossing Schemes.....	97
1.11.4	Toward the Toric Gross–Siebert Mirror Construction.....	99
1.11.5	Constructing Log Smooth Structures on $\check{X}_0(B, \mathcal{P}, \varphi)$ .....	103
1.11.6	The Local Models of the Log Singularities.....	105
1.11.7	The Scattering Algorithm.....	106
1.12	Enhanced Generically Log Smooth Families.....	107
1.12.1	Enhanced Generically Log Smooth Deformations.....	108
1.12.2	Moving the Log Singular Locus into the Deepest Stratum.....	109
1.12.3	Smoothing Fano Toroidal Crossing Schemes.....	112
1.13	Outlook.....	125
2	<b>Related Works</b> .....	127

**Part IV Applications**

**14 Log Toroidal Families of Gross–Siebert Type**..... 423

14.1 Local Models of Gross–Siebert Type..... 423

14.1.1 The Construction of the Local Model..... 424

14.1.2 The Local Model in Codimension 1..... 428

14.1.3 The Case Where  $\Delta_+$  is an Elementary Simplex  
or a Standard Simplex..... 430

14.1.4 Some Additional Examples..... 432

14.1.5 Some Examples of Weak Gross–Siebert Type..... 437

14.2 Log Toroidal Families of Gross–Siebert Type..... 439

14.3 Unisingular Deformations..... 440

14.3.1 Unisingular Families over the Standard Log Point..... 441

14.3.2 The Unisingular Deformation Functor..... 443

14.3.3 Unisingular Deformations on  $\tilde{U}_0 \subseteq X_0$ ..... 444

14.3.4 Unisingular Deformations of Affine Spaces..... 446

14.3.5 Coherence of  $C_{X_0/S_0}$ ..... 448

14.3.6 Unisingular Deformations of Families of  
Elementary Gross–Siebert Type..... 452

14.3.7 More Examples of  $C_{X_0/S_0}$ ..... 453

14.3.8 The Interpretation of  $\mathcal{B}_{X_0/S_0}$ ..... 456

**15 The Gerstenhaber Calculus of Log Toroidal Families**..... 459

15.1 Absolute Differential Forms..... 461

15.2 The Characteristic Absolute Gerstenhaber Calculus..... 468

15.3 The Proof of Surjectivity..... 471

15.3.1 The Local Model..... 472

15.3.2 The Transfer to  $f : V_{\alpha;k} \rightarrow S_k$ ..... 474

15.3.3 From Local to Global Analytification..... 476

15.3.4 Comparison of Cohomologies..... 476

15.3.5 The Case of a General  $Q$ ..... 478

**16 Deformations of Line Bundles**..... 481

16.1 The Construction of  $P_A(\mathcal{L}_A)$ ..... 482

16.2 Isomorphisms and Automorphisms..... 486

16.3 The Enhanced System of Deformations  $\mathcal{D}(\mathcal{L}_0)$ ..... 491

**17 Algebraic Deformations**..... 495

17.1 Properties of the Generic Fiber  $X_\eta$ ..... 497

17.2 Comparing the Two Log Structures..... 502

**18 Modifications of the Log Structure**..... 507

18.1 Log Pre-regular Sections and  $f \circ p : L(X) \rightarrow S$ ..... 508

18.2 Log Quasi-regular and Log Regular Sections..... 515

18.3 The Gerstenhaber Calculus on  $f \circ h : X(s) \rightarrow S$ ..... 521

18.4 Thickenings of Log Regular Sections..... 527

18.5 Infinitesimal Automorphisms and Isomorphisms..... 532

18.6	Enhanced Systems of Deformations.....	540
18.7	Log Regular Sections in Practice.....	543
18.8	Smoothing Normal Crossing Spaces.....	546
