**IV. Local Times**

|   |     |
|---|-----|
| <i>R. Ghomrasni and G. Peskir</i>                               |     |
| Local time-space calculus and extensions of Itô's formula ..... | 177 |
| <i>Michael B. Marcus</i>  |     |
| Local times on curves and surfaces .....                        | 193 |

**V. Large and Small Deviations**

|   |     |
|---|-----|
| <i>Miguel A. Arcones</i>                                    |     |
| Large deviations of empirical processes .....               | 205 |
| <i>Xia Chen and Wenbo V. Li</i>                             |     |
| Small deviation estimates for some additive processes ..... | 225 |

**VI. Density Estimation**

|  |     |
|--|-----|
| <i>Evarist Giné, Vladimir Koltchinskii and Lyudmila Sakhanenko</i>                               |     |
| Convergence in distribution of self-normalized sup-norms<br>of kernel density estimators .....   | 241 |
| <i>Andrei Yu. Zaitsev</i>  |     |
| Estimates of the rate of approximation in the CLT<br>for $L_1$ -norm of density estimators ..... | 255 |

**VII. Statistics via Empirical Process Theory**

|  |     |
|--|-----|
| <i>R. M. Dudley</i>  |     |
| Statistical nearly universal Glivenko–Cantelli classes .....   | 295 |
| <i>Peter Gaenssler and Daniel Rost</i>   |     |
| Smoothed empirical processes and the bootstrap .....   | 313 |
| <i>Jon A. Wellner and Vladimir Koltchinskii</i>  |     |
| A note on the asymptotic distribution of Berk–Jones<br>type statistics under the null hypothesis ..... | 321 |
| <i>Dragan Radulović</i>  |     |
| A note on the smoothed bootstrap .....   | 333 |

## Table of Contents

|   |     |
|---|-----|
| <b>Preface</b> .....  | vii |
| <b>I. Measures on General Spaces and Inequalities</b>   |     |
| <i>J. Hoffmann-Jørgensen</i><br>Stochastic inequalities and perfect independence .....  | 3   |
| <i>Jun Kawabe</i><br>Prokhorov–LeCam–Varadarajan’s compactness criteria<br>for vector measures on metric spaces .....   | 35  |
| <i>A.V. Uglanov</i><br>On measures in locally convex spaces .....   | 43  |
| <b>II. Gaussian Processes</b>   |     |
| <i>Paul Deheuvels and Guennady Martynov</i><br>Karhunen–Loève expansions for weighted Wiener processes<br>and Brownian bridges via Bessel functions .....                       | 57  |
| <i>Xavier Fernique</i><br>Extension du théorème de Cameron–Martin<br>aux translations aléatoires. II. Intégrabilité des densités .....  | 95  |
| <b>III. Limit Theorems</b>  |     |
| <i>Vladimir Dobric and Lisa Marano</i><br>Rates of convergence for Lévy’s modulus of continuity<br>and Hinchin’s law of the iterated logarithm .....                            | 105 |
| <i>Stanislaw Kwapień, Rafał Łatała, Krzysztof Oleszkiewicz and Joel Zinn</i><br>On the limit set in the law of the iterated logarithm<br>for $U$ -statistics of order two ..... | 111 |
| <i>André Mas and Ludovic Menneteau</i><br>Perturbation approach applied to the asymptotic study<br>of random operators .....  | 127 |
| <i>David M. Mason</i><br>A uniform functional law of the logarithm<br>for a local Gaussian process .....  | 135 |
| <i>Olimjon Sh. Sharipov</i><br>Strong limit theorems for mixing random variables with<br>values in Hilbert space and their applications .....                                   | 153 |
