# Experimental Design for Mixed Models with Application to Population Pharmacokinetic Studies

**Dissertation**

zur Erlangung des akademischen Grades

**doctor rerum naturalium**
**(Dr. rer. nat.)**

von Thomas Schmelter
geb. am 26.03.1977 in Mainz

genehmigt durch die Fakultät für Mathematik
der Otto-von-Guericke-Universität Magdeburg

Gutachter: Prof. Dr. Rainer Schwabe
Dr. Barbara Bogacka

eingereicht am: 22.12.2006
Verteidigung am: 25.05.2007

# CONTENTS

1 INTRODUCTION 1

2 INTRODUCTION TO PHARMACOKINETIC MODELING 3
2.1 Models . . . 3
2.1.1 One-compartment models . . . 4
2.1.2 Two-compartment models . . . 6
2.1.3 Multiple-dose experiments . . . 7
2.2 Important pharmacokinetic parameters . . . 9
2.3 The population approach . . . 10

3 EXPERIMENTAL DESIGN IN THE ORDINARY LINEAR MODEL 13
3.1 Model . . . 13
3.2 Designed experiments . . . 14
3.3 Optimality criteria . . . 16
3.4 Convex design theory . . . 18

4 LINEAR MIXED MODELS 23
4.1 The random coefficient regression model . . . 23
4.2 General model . . . 25
4.3 Estimation . . . 27
4.3.1 Estimation of fixed effects for known variance parameters . . . 27
4.3.2 Maximum likelihood estimation . . . 29
4.4 The Fisher information matrix . . . 30

5 NONLINEAR MIXED MODELS 33
5.1 The model . . . 33
5.2 Estimation . . . 34
5.2.1 Two-stage procedure . . . 34
5.2.2 Maximum likelihood . . . 35
5.3 Approximation of the Fisher information . . . 36
5.4 Proportional error models . . . 37

6 DESIGNS, INFORMATION MATRICES AND CRITERIA 41
6.1 Designs . . . 41
6.1.1 Individual (elementary) designs . . . 41
6.1.2 Population designs . . . 42

6.2 Information matrices . . . . . 43
6.2.1 Population parameter block . . . . . 43
6.2.2 Variance parameter block (for diagonal D) . . . . . 47
6.3 Criteria . . . . . 49
6.3.1 Criteria based on the population parameter block . . . . . 49
6.3.2 Criteria based on the whole information matrix . . . . . 51

7 SINGLE-GROUP DESIGNS FOR POPULATION PARAMETER ESTIMATION 55
7.1 Single-group designs in RCR models . . . . . 55
7.2 Group-wise identical designs in the general mixed model . . . . . 58
7.3 Further extension . . . . . 62

8 EQUIVALENCE THEOREMS 65
8.1 General formulation . . . . . 65
8.2 Equivalence theorems for single group designs in the RCR model . . . . . 66
8.3 Equivalence theorems in the general mixed model . . . . . 71
8.4 Equivalence theorems based on population designs . . . . . 74

9 PRACTICAL CONSIDERATIONS AND DISCUSSION 79
9.1 Non-integer replications . . . . . 79
9.2 Repeated measurements . . . . . 80
9.3 Dependence of optimal designs on unknown parameters . . . . . 82
9.4 Further practical implications . . . . . 83
9.5 Conclusion . . . . . 84

NOMENCLATURE 85

BIBLIOGRAPHY 89
