<i>Woodhead Publishing Series in Energy</i>	<i>xvii</i>
<i>Preface</i>	<i>xix</i>
<b>Part I Pretreatment and fractionation processes for lignocellulose-to-bioalcohol production</b>	
<b>1 Hydrothermal pretreatment of lignocellulosic biomass</b>	<b>3</b>
S. EWANICK and R. BURA, University of Washington, USA	
1.1 Introduction	3
1.2 Physical comminution	4
1.3 Hydrothermal pretreatment (liquid hot water and steam)	5
1.4 Conclusions	16
1.5 Future trends	17
1.6 References	18
<b>2 Thermochemical pretreatment of lignocellulosic biomass</b>	<b>24</b>
S. P. S. CHUNDAWAT, V. BALAN, L. DA COSTA SOUSA and B. E. DALE, Michigan State University, USA	
2.1 Introduction	24
2.2 Why is pretreatment necessary for lignocellulosics?	25
2.3 Types of chemical pretreatment	32
2.4 Comparing effectiveness of leading pretreatments on corn stover and poplar	41
2.5 Characteristics of an ideal pretreatment	47
2.6 Conclusions	58

vi	Contents	
2.7	Acknowledgements	59
2.8	References	60
3	<b>Key features of pretreated lignocellulosic biomass solids and their impact on hydrolysis</b>	<b>73</b>
	R. KUMAR, Zymetis Inc., USA and C. E. WYMAN, University of California, USA	
3.1	Introduction	73
3.2	Key substrate features controlling cellulose hydrolysis: crystallinity	75
3.3	Key substrate features controlling cellulose hydrolysis: degree of polymerization (DP)	84
3.4	Key substrate features controlling cellulose hydrolysis: hemicellulose and degree of hemicellulose acetylation	88
3.5	Key substrate features controlling cellulose hydrolysis: lignin	91
3.6	Conclusions	97
3.7	Acknowledgements	101
3.8	References	101
4	<b>Solvent fractionation of lignocellulosic biomass</b>	<b>122</b>
	N. SATHITSUKSANOH, Z. ZHU, J. ROLLIN and Y.-H. P. ZHANG, Virginia Polytechnic Institute and State University, USA
