## Contents

Preface XV

List of Contributors XVII

- 1 Carbon Dioxide: Utilization Options to Reduce its Accumulation in the Atmosphere 1**  
*Michele Aresta*
- 1.1 Carbon Dioxide Emission 1
- 1.2 The Accumulation of CO<sub>2</sub> in the Atmosphere, and the Effects that We Fear 1
- 1.3 Technologies to Reduce CO<sub>2</sub> Accumulation in the Atmosphere 4
- 1.4 The Utilization of CO<sub>2</sub> 6
- 1.5 Conditions for Using CO<sub>2</sub> 8
- 1.6 CO<sub>2</sub>: Sources and Prices 8
- 1.7 The Potential for CO<sub>2</sub> Utilization, and the Content of This Book 9
- 1.8 The Need for Research to Speed an Exploitation of the Utilization Option 11
- References 13
- 2 Utilization of Dense Carbon Dioxide as an Inert Solvent for Chemical Syntheses 15**  
*Alessandro Galia and Giuseppe Filardo*
- 2.1 Introduction 15
- 2.2 Dense Carbon Dioxide as Solvent Medium for Chemical Processes 15
- 2.3 Enzymatic Catalysis in Dense Carbon Dioxide 18
- 2.4 Other Reactions in Dense Carbon Dioxide 19
- 2.5 Polymer Synthesis in Supercritical Carbon Dioxide 20
- 2.5.1 Chain Polymerizations: Synthesis of Fluoropolymers 22
- 2.5.2 Step Polymerizations: Synthesis of Biodegradable Polymers 26
- 2.6 Conclusions 27
- Acknowledgments 27
- References 28

<b>3</b>	<b>Autotrophic Carbon Fixation in Biology: Pathways, Rules, and Speculations</b> 33
	<i>Ivan A. Berg, Daniel Kockelkorn, W. Hugo Ramos-Vera, Rafael Say, Jan Zarzycki, and Georg Fuchs</i>
3.1	Introduction 33
3.2	The Mechanisms of CO <sub>2</sub> Fixation 34
3.2.1	The Calvin–Benson–Bassham (CBB) Cycle 34
3.2.2	The Reductive Citric Acid Cycle (Arnon–Buchanan Cycle) 37
3.2.3	The Reductive Acetyl-CoA Pathway (Wood–Ljungdahl Pathway) 39
3.2.4	The 3-Hydroxypropionate/Malyl-CoA Cycle 40
3.2.5	The 3-Hydroxypropionate/4-Hydroxybutyrate Cycle 42
3.2.6	The Dicarboxylate/4-Hydroxybutyrate Cycle 44
3.3	Rules to Explain the Diversity 46
3.4	Evolutionary Aspects 49
3.5	Chemical Aspects of CO <sub>2</sub> Fixation 50
	Acknowledgments 51
	References 51
<b>4</b>	<b>Carbon Dioxide Coordination Chemistry and Reactivity of Coordinated CO<sub>2</sub></b> 55
	<i>Joëlle Mascetti</i>
4.1	Introduction 55
4.2	Carbon Dioxide Bonding to Metals 56
4.3	Synthesis and Structure of CO <sub>2</sub> Complexes 59
4.3.1	Low-Temperature Matrix Isolation and Theoretical Studies 59
4.3.2	Synthesis of Stable Complexes 64
4.3.2.1	End-On Complexes 65
4.3.2.2	Side-On Complexes 67
4.3.2.3	Bridged Complexes 67
4.3.2.4	Bridged Complexes Obtained by In-situ Synthesis 67
4.4	Reactivity of CO <sub>2</sub> Complexes 69
4.4.1	C–O Bond Cleavage and O Transfer 70
4.4.2	Reactions with Electrophiles 72
4.4.3	Reactions with Nucleophiles 73
4.5	CO <sub>2</sub> Complexes as Reaction Intermediates in CO <sub>2</sub> Utilization Processes 75
4.5.1	Oxidative Coupling Reactions 76
4.5.2	Reduction Reactions 79
4.5.3	Catalytic Processes 81
4.5.4	Bioinspired Reactions 82
4.6	Conclusions 84
	Acknowledgments 85
	References 85

- 5 Main Group Element- and Transition Metal-Promoted Carboxylation of Organic Substrates (Alkanes, Alkenes, Alkynes, Aromatics, and Others) 89**  
*Thomas Zevaco and Eckhard Dinjus*
- 5.1 Introduction 89
- 5.2 Formation of Aromatic Carboxylic Acids:  
The Kolbe–Schmitt Synthesis 90
- 5.2.1 Kolbe–Schmitt Synthesis: Generalities 90
- 5.2.2 Reaction Parameters and Mechanistic Studies of  
the Kolbe–Schmitt Synthesis 91
- 5.2.3 Recent Applications of the Kolbe–Schmitt Carboxylation: Synthesis of  
1,3-Dialkylimidazolium-2-Carboxylates 97
- 5.2.4 Carboxylation of C–H-Acidic Compounds 99
- 5.3 Reactive Organometallic Derivatives in the Synthesis of  
Carboxylic Acids 102
- 5.3.1 Generalities 102
- 5.3.2 Bimetallic Catalytic Systems 104
- 5.3.2.1 Pd/Sn Systems 104
- 5.3.2.2 Rh/B and Cu/B 107
- 5.3.2.3 Ni/Zn 108
- 5.4 Palladium (0)-Catalyzed Telomerization of Butadiene with CO<sub>2</sub>:  
Synthesis of  $\delta$ -Lactone 112  
References 116
- 6 The Chemistry of N–CO<sub>2</sub> Bonds: Synthesis of Carbamic Acids and Their Derivatives, Isocyanates, and Ureas 121**  
*Eugenio Quaranta and Michele Aresta*
- 6.1 Introduction 121
- 6.2 Synthesis of Carbamic Acids and Alkylammonium  
Carbamates 122
- 6.3 Synthesis of Carbamate Esters 125
- 6.3.1 Transfer of Carbamate Group to Alkyl Halides 126
- 6.3.2 Transfer of Carbamate Group to Acylating Agents 131
- 6.3.3 Transfer of Carbamate Group to Alcohols 134
- 6.3.4 Transfer of Carbamate Group to Epoxides 138
- 6.3.5 Transfer of Carbamate Group to C–C Double Bonds 142
- 6.3.6 Transfer of Carbamate Group to C–C Triple Bonds 145
- 6.4 Synthesis of Isocyanates 148
- 6.5 Synthesis of Ureas 154
- 6.6 Conclusions 159  
References 159
- 7 Synthesis of Linear and Cyclic Carbonates 169**  
*Danielle Ballivet-Tkatchenko and Angela Dibenedetto*
- 7.1 Introduction 169
- 7.2 Acyclic Organic Carbonates 170

- 7.2.1 Market and Production 170
- 7.2.2 Current Trends with CO<sub>2</sub> as Feedstock 172
- 7.2.3 Alcoholysis of Urea 174
- 7.2.4 Direct Route 175
- 7.2.5 The Future of CO<sub>2</sub>-Based Routes to Acyclic Carbonates 180
- 7.3 Synthesis of Organic Cyclic Carbonates 181
  - 7.3.1 Carboxylation of Epoxides 182
    - 7.3.1.1 Use of Conventional Solvents 182
    - 7.3.1.2 Use of Ionic Liquids 184
    - 7.3.1.3 Use of Supercritical CO<sub>2</sub> 185
    - 7.3.1.4 Combined Reaction Media: sc-CO<sub>2</sub> and Ionic Liquids 185
  - 7.3.2 Oxidative Carboxylation of Olefins 186
    - 7.3.2.1 Use of Oxygen as Oxidant 186
    - 7.3.2.2 Use of Other Oxidants 188
  - 7.3.3 Other Synthetic Routes to Cyclic Carbonates 189
    - 7.3.3.1 From Halohydrins 189
    - 7.3.3.2 From Halogenated Carbonates 190
    - 7.3.3.3 Reaction of Cyclic Ketals with Carbon Dioxide 191
  - 7.3.4 Synthesis of Cyclic Carbonates from Propargylic Alcohols 191
  - 7.3.5 Reaction Between Carbon Dioxide and Diols 192
  - 7.3.6 Reaction of Urea and Diols 194
  - 7.3.7 Reaction of Carbon Dioxide or Urea with Glycerol 195
  - 7.3.8 Reactivity of Cyclic Alkylene Carbonates 198
- 7.4 Transesterification Reactions 200
  - 7.4.1 Synthesis of Acyclic Carbonates 200
  - 7.4.2 Synthesis of Cyclic Carbonates 204
- References 205
  
- 8 Polymers from Carbon Dioxide: Polycarbonates, Polythiocarbonates, and Polyurethanes 213**  
*Donald J. Darensbourg, Jeremy R. Andreatta, and Adriana I. Moncada*
  - 8.1 Introduction 213
  - 8.2 Historical Perspective 215
  - 8.3 Metal Catalysts for the Copolymerization of Epoxides and CO<sub>2</sub> 215
  - 8.4 Metal Catalysts for the Copolymerization of Oxetanes and CO<sub>2</sub> 228
    - 8.4.1 Early Studies 228
    - 8.4.2 Recent Studies using Transition Metal Catalysts 229
  - 8.5 Physical Methods for the Characterization of Copolymers Produced from Epoxides or Oxetane and Carbon Dioxide 235
    - 8.5.1 Cyclohexene Oxide Monomer 235
    - 8.5.2 Propylene Oxide Monomer 237
    - 8.5.3 Oxetane Monomer 239
  - 8.6 Copolymer Isolation and Catalyst Recycling 241

- 8.7 Copolymerization of Carbon Disulfide and Epoxides and Episulfides 244
- 8.8 Copolymers from Aziridines and Carbon Dioxide 245
- 8.9 Concluding Remarks 245
  - Acknowledgments 246
  - References 246
  
- 9 ***In-Situ* Study of Carbon Deposition during CO<sub>2</sub> Reforming of Methane for Synthesis Gas Production, Using the Tapered Element Oscillation Microbalance** 249
  - Wie Pan and Chunshan Song*
  - 9.1 Introduction 249
  - 9.2 Thermodynamic Analysis of Carbon Formation from CH<sub>4</sub> or CO 252
  - 9.3 Thermodynamic Analysis of Carbon Formation in CO<sub>2</sub> Reforming of Methane 254
  - 9.4 TEOM Measurement of Carbon Formation in CO<sub>2</sub> Reforming of Methane 256
  - 9.5 TPO Analysis of Carbon Formation in CO<sub>2</sub> Reforming 257
  - 9.6 TEM Analysis on Carbon Formed on Catalysts After CO<sub>2</sub> Reforming of Methane 259
  - 9.7 Kinetic Study of Carbon Formation on P<sub>CH<sub>4</sub></sub> and P<sub>CO</sub> in CO<sub>2</sub> Reforming 260
  - 9.8 H<sub>2</sub>O Effect on Carbon Formation in CO<sub>2</sub> Reforming 262
  - 9.9 Conclusions 263
    - Acknowledgments 263
    - References 263
    - Appendix A9.1 264
  
- 10 **Utilization of Carbon Dioxide through Nonthermal Plasma Approaches** 267
  - Ji-Jun Zou and Chang-Jun Liu*
  - 10.1 Introduction 267
  - 10.2 Nonthermal Plasma Phenomena 268
    - 10.2.1 Electron/Molecular Reactions 270
    - 10.2.2 Atom/Ion/Molecule Reactions 270
    - 10.2.3 Heterogeneous Reactions 271
  - 10.3 CO and/or H<sub>2</sub> Production from CO<sub>2</sub> 272
    - 10.3.1 CO<sub>2</sub> Dissociation 272
    - 10.3.2 Reforming of CH<sub>4</sub> with CO<sub>2</sub> 273
    - 10.3.3 Reforming of Aliphatic Hydrocarbons with CO<sub>2</sub> 275
    - 10.3.4 Other Reforming Reactions with CO<sub>2</sub> 276
    - 10.3.5 Reduction of CO<sub>2</sub> 276
  - 10.4 Hydrocarbons Synthesis from CO<sub>2</sub> 277
    - 10.4.1 Oxidative Coupling of CH<sub>4</sub> with CO<sub>2</sub> 277
    - 10.4.2 Hydrogenation of CO<sub>2</sub>/CO to C<sub>2</sub> Hydrocarbons 278

10.4.3	Higher Hydrocarbons from CH <sub>4</sub> and CO <sub>2</sub>	279
10.5	Oxygenates Synthesis from CO <sub>2</sub>	280
10.5.1	Methanol from CO <sub>2</sub> Hydrogenation	280
10.5.2	Methanol from CO <sub>2</sub> and CH <sub>4</sub>	281
10.5.3	Aldehydes from CH <sub>4</sub> and CO <sub>2</sub>	282
10.5.4	Acetic Acid from CH <sub>4</sub> and CO <sub>2</sub>	282
10.5.5	Oxygenates from H <sub>2</sub> O and CO <sub>2</sub>	283
10.6	Combination of Plasma with Catalyst	284
10.6.1	Catalysts in Plasma Utilization of CO <sub>2</sub>	284
10.6.2	Interaction Between Plasma and Catalyst	285
10.7	Summary	286
	Acknowledgments	287
