Preface	ix
Chapter 1. Introduction to Stochastic Processes	1
1.1. Sequences of random variables	1
1.2. The notion of stochastic process	10
1.3. Martingales	13
1.3.1. Stopping time	13
1.3.2. Discrete-time martingales	14
1.3.3. Martingale convergence	16
1.3.4. Square integrable martingales	17
1.4. Markov chains	17
1.4.1. Markov property	18
1.4.2. Transition function	20
1.4.3. Strong Markov property	23
1.5. State classification	24
1.5.1. Stationary probability	26
1.6. Continuous-time Markov processes	27
1.6.1. Transition function	28
1.6.2. Kolmogorov equations	29
1.7. Semi-Markov processes	33
1.7.1. Markov renewal processes	33
1.7.2. Semi-Markov processes	34
Chapter 2. Simple Stochastic Models	37
2.1. Urn models	37
2.2. Random walks	39

2.3. Brownian motion	44
2.3.1. Introduction	44
2.3.2. Basic properties	47
2.4. Poisson processes	50
2.5. Birth and death processes	59
Chapter 3. Elements of Markov Modeling	61
3.1. Markov models: ideas, history, applications	61
3.2. The discrete-time Ehrenfest model	63
3.2.1. The microscopic chain	63
3.2.2. The macroscopic chain	66
3.2.3. Some characteristics of the Ehrenfest model	70
3.2.4. The discrete-time Ehrenfest model: history, generalizations, similar models	77
3.3. Markov models in genetics	79
3.3.1. Laws of heredity and mathematics	79
3.3.2. Haploid models	81
3.3.3. Models with two genotypes and without mutations	88
3.3.4. Models with several genotypes and without mutations	92
3.3.5. Models with two genotypes and mutations	94
3.3.6. Models with several genotypes and mutations	96
3.3.7. Models with partitioned population	100
3.3.8. Genealogy models for large size populations	102
3.4. Markov storage models	110
3.4.1. Discrete-time models	110
3.4.2. Continuous-time models	117
3.4.3. A generalized storage model	121
3.5. Reliability of Markov models	124
3.5.1. Introduction to reliability	124
3.5.2. Some classes of survival distributions	131
3.5.3. Discrete-time models	137
3.5.4. Continuous-time models	142
Chapter 4. Renewal Models	149
4.1. Fundamental concepts and examples	149
4.2. Waiting times	155
4.3. Modified renewal processes	159
4.4. Replacement models	161

4.5. Renewal reward processes	165
4.6. The risk problem of an insurance company	168
4.7. Counter models	171
4.7.1. Type I counters	171
4.7.2. Type II counters	178
4.8. Alternating renewal processes	180
4.9. Superposition of renewal processes	182
4.10. Regenerative processes	186
Chapter 5. Semi-Markov Models	189
5.1. Introduction	189
5.2. Markov renewal processes	190
5.2.1. Definitions	190
5.2.2. Markov renewal theory	193
5.3. First-passage times and state classification	196
5.3.1. Stationary distribution and asymptotic results	197
5.4. Reliability	200
5.5. Reservoir models	207
5.5.1. Model I	208
5.5.2. Model II	213
5.6. Queues	218
5.6.1. The $G/M/1$ queue	219
5.6.2. The $M/G/1$ queue	221
5.7. Digital communication channels	222
Chapter 6. Branching Models	227
6.1. The Bienaymé-Galton-Watson model	227
6.1.1. Historical considerations	227
6.1.2. Some elementary results	232
6.1.3. A fundamental example	235
6.1.4. Extinction probability: critical theorem	236
6.1.5. Asymptotic formulas for the extinction probability	240
6.1.6. Bounds for the extinction probability	243
6.1.7. A decomposition of supercritical models	245
6.1.8. Extinction time	246
6.1.9. Bounds for the distribution and the mean of the extinction time	252
6.1.10. Asymptotic properties	255

- 6.1.11. Local limit laws 261
- 6.1.12. Complete solution of Galton’s problem and a genetics problem 262
- 6.1.13. Elements of statistical inference 265
- 6.2. Generalizations of the B-G-W model 271
 - 6.2.1. The non-homogenous B-G-W model (in a varying environment) 271
 - 6.2.2. The B-G-W model in a random environment 278
 - 6.2.3. The B-G-W model with immigration 283
 - 6.2.4. B-G-W models with controlled multiplication 293
 - 6.2.5. B-G-W models with spatial spread 295
 - 6.2.6. B-G-W model with r types of objects 296
- 6.3. Continuous-time models 302
 - 6.3.1. The Markov model 303
 - 6.3.2. The Bellman-Harris model 307
 - 6.3.3. The Crump-mode-Jagers-Ryan model 309
- Chapter 7. Optimal Stopping Models 315**
 - 7.1. The classic optimal stopping problem 315
 - 7.1.1. Formulation of the problem 315
 - 7.1.2. Optimal stopping for a Markov structure 319
 - 7.1.3. The functional equation 324
 - 7.1.4. Reduction to linear programming 326
 - 7.1.5. Solving an optimal stopping problem in some special cases 329
 - 7.2. Renewal with binary decision 333
 - 7.2.1. Formulation of the problem 333
 - 7.2.2. Reduction to an optimal stopping problem 337
- Bibliography 343**
- Notation 367**
- Index 369**
