

High-energy ball milling

Mechanochemical
processing of
nanopowders

Edited by
Małgorzata Sopicka-Lizer

CRC Press

Contents

<i>Contributor contact details</i>	<i>xi</i>
1 Introduction to mechanochemical processing M. SOPICKA-LIZER, Silesian University of Technology, Poland	1
Part I Basic science of mechanochemistry	7
2 Mechanism and kinetics of mechanochemical processes F. KH. URAKAEV, Institute of Geology and Mineralogy SB RAS, Russia	9
2.1 Introduction	9
2.2 General issues	15
2.3 Calculation of t - P - T conditions at point of contact of milling tools and treated particles	16
2.4 Mechanism of mechanochemical processes	22
2.5 Kinetics of mechanochemical processes	27
2.6 Use of kinetic equations	32
2.7 Conclusions	40
2.8 References	40
3 Kinetic behaviour of mechanically induced structural and chemical transformations G. MULAS, Università degli Studi di Sassari, Italy; and F. DELOGU, Università degli Studi di Cagliari, Italy	45
3.1 Introduction	45
3.2 Mechanochemistry	46
3.3 Outline of experimental methods	48
3.4 Degradation of chlorinated aromatics	50
3.5 Hydrogen absorption on Mg ₂ Ni/Ni composite	53

vi	Contents	
3.6	Catalytic hydrogenation of carbon monoxide	57
3.7	Future trends	59
3.8	References	60
4	Materials design through mechanochemical processing	63
	M. SENNA, Keio University, Japan	
4.1	Introduction	63
4.2	Benefits of a mechanochemical route for materials design	64
4.3	Theoretical aspects of modern mechanochemistry	67
4.4	Composite oxides in electromagnetic applications	68
4.5	Organic synthesis and utilization of spontaneous chemical reactions	80
4.6	Conclusions and future trends	84
4.7	References	85
5	Kinetic processes and mechanisms of mechanical alloying	92
	F. DELOGU, Università degli Studi di Cagliari, Italy; and G. MULAS, Università degli Studi di Sassari, Italy	
5.1	Introduction	92
5.2	Fundamentals of mechanical alloying processes in ball mills	93
5.3	A phenomenological model of mechanical alloying kinetics	95
5.4	Collecting and analysing experimental data on the kinetics of mechanical alloying reactions	98
5.5	Mechanisms of chemical mixing on the atomic scale	103
5.6	Future trends	106
5.7	References	108
Part II	Mechanochemical treatment of different materials	111
6	Mechanochemical synthesis of complex ceramic oxides	113
	T. ROJAC and M. KOSEC, Jožef Stefan Institute, Slovenia	
6.1	Introduction	113
6.2	Mechanisms and kinetics of mechanochemical reactions in complex oxide systems	114
6.3	Mechanochemical synthesis of complex oxides with various properties	126

6.4	Future trends	139
6.5	References	141
7	Production of intermetallic compound powders by a mechanochemical approach: solid–liquid reaction ball milling	149
	D. CHEN, Y. JIANG, J. CAI and Z. CHEN, Hunan University, People’s Republic of China; and P. HUANG, Central South University, People’s Republic of China	
7.1	Introduction	149
7.2	Experimental equipment and methods	151
7.3	As-milled products obtained from solid–liquid reaction ball milling	152
7.4	Reaction mechanism of solid–liquid reaction ball milling	158
7.5	Conclusions	164
7.6	Acknowledgement	164
7.7	References	164
8	Mechanochemical processing of non-oxide systems with highly covalent bonds	167
	M. SOPICKA-LIZER, Silesian University of Technology, Poland	
8.1	Introduction	167
8.2	Manufacturing non-oxide powders by mechanochemical processing	169
8.3	Mechanochemical processing of reactive systems	180
8.4	Conclusion	188
8.5	References	188
9	Mechanochemical synthesis of metallic–ceramic composite powders	193
	K. WIECZOREK-CIUROWA, Cracow University of Technology, Poland	
9.1	Introduction	193
9.2	Composite powder formation: bottom-up and top-down techniques	194
9.3	Monitoring mechanochemical processes	203
9.4	Examples of applied high-energy milling in the synthesis of selected metallic–ceramic composite powders	205
9.5	Copper-based composite powders with Al_2O_3	207
9.6	Nickel-based composite powders with Al_2O_3	214

viii	Contents	
9.7	Other possible variants of the synthesis of metal matrix–ceramic composites in Cu–Al–O and Ni–Al–O elemental systems using mechanical treatment <i>ex situ</i> and <i>in situ</i>	217
9.8	Conclusions	219
9.9	Acknowledgements	220
9.10	References	220
10	Mechanochemical synthesis of organic compounds and rapidly soluble materials	224
	A.V. DUSHKIN, Institute of Solid State Chemistry and Mechanochemistry SB RAS, Russia	
10.1	Introduction	224
10.2	Solid state mechanochemical synthesis of low-molecular-weight organic compounds	225
10.3	Effect of solid particles aggregation on reactivity in mechanochemical reactions	229
10.4	Synthesis of rapidly soluble materials for pharmaceutical applications	235
10.5	Future trends	244
10.6	References	245
	Part III Mechanochemical processes in metal powder systems and other applications	249
11	Mechanochemical plating and surface modification using ultrasonic vibration	251
	S.V. KOMAROV, Nippon Light Metal Co. Ltd, Japan; S.E. ROMANKOV, N. HAYASHI and E. KASAI, Tohoku University, Japan	
11.1	Introduction	251
11.2	Key concepts	253
11.3	Surface modification and coating treatment of as-obtained substrates	255
11.4	Surface treatment of precoated substrates	260
11.5	Production of nanostructured coatings	267
11.6	Conclusions and future trends	272
11.7	References	273
12	Mechanochemically activated powders as precursors for spark plasma sintering (SPS) processes	275
	R. ORRÙ, R. LICHERI, A.M. LOCCI and G. CAO, Università degli Studi di Cagliari, Italy	
12.1	Introduction	275

12.2	Experimental materials and methods	277
12.3	Results and discussion	282
12.4	Conclusions and future trends	296
12.5	Acknowledgements	297
12.6	References	297
13	Synthesis of titanium dioxide-based, visible-light induced photocatalysts by mechanochemical doping	304
	S. YIN, Q. ZHANG, F. SAITO and T. SATO, Tohoku University, Japan	
13.1	Introduction	304
13.2	Titanium dioxide and its photocatalytic applications	305
13.3	Synthesis of anion-doped, titanium-dioxide, visible-light induced photocatalysts by mechanochemical doping	310
13.4	Future trends	325
13.5	Acknowledgement	326
13.6	References	326
14	Soft mechanochemical synthesis of materials for lithium-ion batteries: principles and applications	331
	N.V. KOSOVA, Institute of Solid State Chemistry and Mechanochemistry SB RAS, Russia	
14.1	Introduction: principles of soft mechanochemical synthesis of solid inorganic compounds	331
14.2	Reactions of LiOH with anhydrous oxides	333
14.3	Reactions of LiOH with solid hydroxides	344
14.4	Reactions of LiOH and Li ₂ CO ₃ with crystal hydrates and acidic salts	348
14.5	Conclusions	354
14.6	Future trends	357
14.7	Acknowledgements	357
14.8	References	357
15	Materials for lithium-ion batteries by mechanochemical methods	361
	L.C. YANG, Q.T. QU, Y. SHI and Y.P. WU, Fudan University, China; T. VAN REE, University of Venda, South Africa	
15.1	Introduction	361
15.2	Lithium-ion batteries	362
15.3	Mechanochemical preparation of cathode materials	365
15.4	Mechanochemical preparation of anode materials	374
15.5	Solid electrolytes from mechanochemical methods	397
15.6	Conclusions	400
