Contents

Preface *XI*

Constants, Abbreviations, Symbols *XV*

Part One Introduction 1

1 Basic Concepts and Terms 3

References 6

2 A Column 7

2.1 Retention Mechanisms 7

2.2 Structures 8

2.3 Operational Modes 10

2.4 Specific and General Properties of a Column 10

2.5 Boundaries 11

References 13

Part Two Background 15

3 Linear Systems 17

3.1 Problem Review: Metrics for Peak Retention Time and Width 17

3.2 Chromatograph as an Information Processing System 18

3.3 Properties of Linear Systems 20

3.4 Mathematical Moments of Functions 22

3.4.1 The First and Higher Moments of a Pulse 24

3.5 Properties of Mathematical Moments 29

3.5.1 Standard Deviation of Convolution of Two Pulses 30

3.6 Pulses 31

References 33

4 Migration of a Solid Object 35

4.1 Velocity of an Object 35

4.2 Parameters of Migration Path 35

4.3	Relations between Path Parameters and Object Parameters	37
	References	40
5	Solute–Liquid Interaction in Gas Chromatography	41
5.1	Distribution Constant and Retention Factor	41
5.2	Chromatographic Parameters of Solute–Liquid Interaction	46
5.3	Alternative Expressions of Ideal Retention Model	50
5.4	Linearized Retention Model	52
5.5	Relations Between Characteristic Parameters	53
5.5.1	Fixed Dimensionless Film Thickness	53
5.5.2	Arbitrary Film Thickness	56
5.5.3	Generic Solutes	60
5.5.4	Characteristic Temperatures of <i>n</i> -Alkanes	61
	References	63
6	Molecular Properties of Ideal Gas	67
6.1	Theory	68
6.2	Gas Viscosity and Related Parameters – Empirical Formulae	71
6.3	Empirical Formulae for Solute Diffusivity in a Gas	75
6.3.1	Simplified Formulae	76
6.3.2	Diffusivity of <i>n</i> -Alkanes	78
	References	87
7	Flow of Ideal Gas	91
7.1	Flow of Gas in a Tube	91
7.1.1	One-Dimensional Model of a Tube	91
7.1.2	Gas Velocity	93
7.1.3	Flow Rate	94
7.1.4	Mass-Conserving Flow	97
7.2	Pneumatic Parameters	99
7.2.1	Energy Flux	99
7.2.2	Specific Flow Rate	100
7.2.3	Spatial Profiles of Pressure and Velocity	102
7.2.4	Critical Length of a Tube	104
7.2.5	Vacuum-Extended Length and Related Parameters	107
7.2.6	Hold-up Time	108
7.2.7	Temporal Profiles	110
7.2.8	Averages	112
7.2.9	Virtual Pressure	115
7.3	Relations Between Pneumatic Parameters	119
7.3.1	General Formulae for the Core Group	119
7.3.2	General Formulae for Other Parameters	122
7.3.3	Special Case: Weak Decompression	123
7.3.4	Special Case: Strong Decompression	125
	References	133

Part Three Formation of Chromatogram 135

8 Formation of Retention Times 137

- 8.1 Solute Mobility 137
- 8.2 Solute–Column Interaction and Solute Migration 139
 - 8.2.1 Parameters of a Solute–Column Interaction 139
 - 8.2.2 Solute Mobility 140
 - 8.2.3 Generic Solutes 142
 - 8.2.4 Velocity of a Solute Zone 143
- 8.3 General Equations of a Solute Migration and Elution 144
 - 8.3.1 Dynamic Gas Propagation Time 147
 - 8.3.2 Solute Retention Time and Dynamic Hold-up Time 152
- 8.4 Uniform Solute Mobility in Isobaric Analysis 154
 - 8.4.1 Uniform Mobility 154
 - 8.4.2 Isobaric (Constant Pressure) GC Analysis 157
 - 8.4.3 Two Factors Affecting Retention Time 159
 - 8.4.4 Approximate Forms of Migration and Elution Equations 160
- 8.5 Scalability of Retention Times in Isobaric Analyses 162
- 8.6 Dimensionless Parameters 167
 - 8.6.1 General Considerations 167
 - 8.6.2 Linear Heating Ramp in an Isobaric Analysis 170
 - 8.6.3 Analytical Solutions for the Linearized Model and Linear Heating Ramp 173
- 8.7 Boundaries of the Linearized Model 183
 - References 190

9 Formation of Peak Spacing 193

- 9.1 Static GC Analysis 194
- 9.2 Closely Migrating Solutes in Dynamic Analysis 194
- 9.3 Isobaric Linear Heating Ramp and Highly Interactive Solutes 196
 - 9.3.1 Solutes Eluting with Equal Mobilities 198
 - 9.3.2 Solutes with Equal Characteristic Temperatures 199
 - 9.3.3 Reversal of Elution Order 202
 - 9.3.4 Sensitivity of the Solute Elution Order to Heating Rate 203
- 9.4 Properties of Generic Solutes 206
 - References 212

10 Formation of Peak Widths 215

- 10.1 Overview 215
- 10.2 Local Plate Height 218
 - 10.2.1 Diffusion in One-Dimensional Stationary Medium 218
 - 10.2.2 Dispersion of a Solute Zone in One-Dimensional Stationary Medium 219
 - 10.2.3 Diffusion in a Uniform Flow in a Capillary Column 220
 - 10.2.4 Dispersion of a Solute Zone in a Uniform Flow in an Inert Tube 220

10.2.5	Plate Height as a Spatial Dispersion Rate of a Moving Solute	222
10.2.6	Plate Height in a Capillary Column	225
10.2.7	Structure and Parameters of Golay Formula for Plate Height	228
10.3	Solute Zone in Nonuniform Medium	239
10.3.1	Spatial Width of a Zone	239
10.3.2	Temporal Width of a Zone	244
10.4	Apparent Plate Number and Height	247
10.4.1	Overview	247
10.4.2	Static Conditions	252
10.4.3	Plate Height and Pneumatic Variables	254
10.4.4	Dimensionless Plate Height	259
10.5	Thin Film Columns	260
10.5.1	Plate Height and Flow Rate	260
10.5.2	Plate Height and Average Gas Velocity	264
10.5.3	Plate Height and Pressure Drop	268
10.5.4	Specific Flow Rate as a Pneumatic Variable of Choice	269
10.6	Thick Film Columns	270
10.7	Temperature-Programmed Analyses	272
10.8	Temperature-Programmed Thin Film Columns	275
10.8.1	Isobaric Heating Ramp in a Thin Film Columns	275
10.8.2	Critical Length of a Column	281
10.8.3	Peak Width	283
10.9	Packed Columns	295
10.10	Scalability of Peak Widths in Isobaric Analyses	295
10.11	Plate Height: Evolution of the Concept	297
10.11.1	Distillation Columns	297
10.11.2	The First Plate Models in Chromatography	299
10.11.3	H.E.T.P. and Molecular Diffusion	300
10.11.4	van Deemter Formula	301
10.11.5	H.E.T.P. as a Spatial Dispersion Rate	302
10.11.6	Plate Height	302
10.11.7	Local and Apparent Plate Height	304
10.11.8	A Retrospect	305
10.12	Incorrect Plate Height Theory	306
10.12.1	Conflicts with Reality	308
10.12.2	Origins of Incorrect Formulae	310
10.12.3	What Stimulated Adoption of Incorrect Formulae?	312
10.12.4	Immediate Objections and Retractions	313
10.12.5	Other Track	315
	References	323
