Part I: Topology and Differential Geometry

Introduction to Part I

## 1 Topology

1.1 Preliminaries ........................................... 5
1.2 Topological Spaces ..................................... 6
1.3 Metric spaces .......................................... 9
1.4 Basis for a topology .................................... 11
1.5 Closure .................................................. 12
1.6 Connected and Compact Spaces ....................... 13
1.7 Continuous Functions ................................... 15
1.8 Homeomorphisms ....................................... 17
1.9 Separability ............................................ 18

## 2 Homotopy

2.1 Loops and Homotopies .................................. 21
2.2 The Fundamental Group ................................. 25
2.3 Homotopy Type and Contractibility ................. 28
2.4 Higher Homotopy Groups ............................... 34

## 3 Differentiable Manifolds I

3.1 The Definition of a Manifold ......................... 41
3.2 Differentiation of Functions .......................... 47
3.3 Orientability .......................................... 48
3.4 Calculus on Manifolds: Vector and Tensor Fields 50
3.5 Calculus on Manifolds: Differential Forms ........... 55
3.6 Properties of Differential Forms ..................... 59
3.7 More About Vectors and Forms ........................ 62

## 4 Differentiable Manifolds II

4.1 Riemannian Geometry ................................ 65
4.2 Frames ....................................................... 67
4.3 Connections, Curvature and Torsion .................. 69
4.4 The Volume Form ........................................ 74
4.5 Isometry .................................................. 76
4.6 Integration of Differential Forms .................... 77
4.7 Stokes' Theorem .......................................... 80
4.8 The Laplacian on Forms ................................. 83

5 Homology and Cohomology .......................... 87
5.1 Simplicial Homology .................................... 87
5.2 De Rham Cohomology .................................. 100
5.3 Harmonic Forms and de Rham Cohomology ......... 103

6 Fibre Bundles ............................................. 105
6.1 The Concept of a Fibre Bundle ....................... 105
6.2 Tangent and Cotangent Bundles ...................... 111
6.3 Vector Bundles and Principal Bundles ............... 112

Bibliography for Part I .................................. 117

Part II: Group Theory and Structure and Representations of Compact Simple Lie Groups and Algebras 119

Introduction to Part II .................................. 121

7 Review of Groups and Related Structures ........... 123
7.1 Definition of a Group .................................... 123
7.2 Conjugate Elements, Equivalence Classes .......... 124
7.3 Subgroups and Cosets ................................... 124
7.4 Invariant (Normal) Subgroups, the Factor Group .. 125
7.5 Abelian Groups, Commutator Subgroup ............... 126
7.6 Solvable, Nilpotent, Semisimple and Simple Groups . 127
7.7 Relationships Among Groups ........................... 129
7.8 Ways to Combine Groups — Direct and Semidirect Products . 131
7.9 Topological Groups, Lie Groups, Compact Lie Groups .. 132

8 Review of Group Representations ..................... 135
8.1 Definition of a Representation ....................... 135
8.2 Invariant Subspaces, Reducibility, Decomposability . 136
8.3 Equivalence of Representations, Schur's Lemma ..... 138
8.4 Unitary and Orthogonal Representations ............. 139
8.5 Contragredient, Adjoint and Complex Conjugate Representations 140
8.6 Direct Products of Group Representations .......... 144
9 Lie Groups and Lie Algebras 147
9.1 Local Coordinates in a Lie Group 147
9.2 Analysis of Associativity 148
9.3 One-parameter Subgroups and Canonical Coordinates 151
9.4 Integrability Conditions and Structure Constants 155
9.5 Definition of a (real) Lie Algebra: Lie Algebra of a given Lie Group 157
9.6 Local Reconstruction of Lie Group from Lie Algebra 158
9.7 Comments on the $G \rightarrow \hat{G}$ Relationship 160
9.8 Various Kinds of and Operations with Lie Algebras 161

10 Linear Representations of Lie Algebras 165

11 Complexification and Classification of Lie Algebras 171
11.1 Complexification of a Real Lie Algebra 171
11.2 Solvability, Levi's Theorem, and Cartan's Analysis of Complex 
(Semi) Simple Lie Algebras 173
11.3 The Real Compact Simple Lie Algebras 180

12 Geometry of Roots for Compact Simple Lie Algebras 183

13 Positive Roots, Simple Roots, Dynkin Diagrams 189
13.1 Positive Roots 189
13.2 Simple Roots and their Properties 189
13.3 Dynkin Diagrams 194

14 Lie Algebras and Dynkin Diagrams for $SO(2l), SO(2l+1), USp(2l), SU(l+1)$ 197
14.1 The $SO(2l)$ Family — $D_l$ of Cartan 197
14.2 The $SO(2l + 1)$ Family — $B_l$ of Cartan 201
14.3 The $USp(2l)$ Family — $C_l$ of Cartan 203
14.4 The $SU(l + 1)$ Family — $A_l$ of Cartan 207
14.5 Coincidences for low Dimensions and Connectedness 212

15 Complete Classification of All CSLA Simple Root Systems 215
15.1 Series of Lemmas 216
15.2 The allowed Graphs $\Gamma$ 220
15.3 The Exceptional Groups 224

16 Representations of Compact Simple Lie Algebras 227
16.1 Weights and Multiplicities 227
16.2 Actions of $E_6$ and $SU(2)^{(a)}$ — the Weyl Group 228
16.3 Dominant Weights, Highest Weight of a UIR 230
16.4 Fundamental UIR's, Survey of all UIR's 233
16.5 Fundamental UIR's for $A_l, B_l, C_l, D_l$ 234
16.6 The Elementary UIR's .......................... 240
16.7 Structure of States within a UIR ................... 241

17 Spinor Representations for Real Orthogonal Groups 245

17.1 The Dirac Algebra in Even Dimensions ............... 246
17.2 Generators, Weights and Reducibility of $U(S)$ – the spinor UIR's
   of $D_l$ .................................................. 248
17.3 Conjugation Properties of Spinor UIR's of $D_l$ ....... 250
17.4 Remarks on Antisymmetric Tensors Under $D_l = SO(2l)$ .... 252
17.5 The Spinor UIR's of $B_l = SO(2l + 1)$ ............... 257
17.6 Antisymmetric Tensors under $B_l = SO(2l + 1)$ ........ 260

18 Spinor Representations for Real Pseudo Orthogonal Groups 261

18.1 Definition of SO($q,p$) and Notational Matters ........ 261
18.2 Spinor Representations $S(A)$ of SO($p,q$) for $p + q = 2l$ .... 262
18.3 Representations Related to $S(A)$ ....................... 264
18.4 Behaviour of the Irreducible Spinor Representations $S_\pm(A)$ . 265
18.5 Spinor Representations of SO($p,q$) for $p + q = 2l + 1$ .......... 266
18.6 Dirac, Weyl and Majorana Spinors for SO($p,q$) .......... 267

Bibliography for Part II 273
