

From Seismic Interpretation to Modelling and Assessment of Oil and Gas Fields

Yury P. Ampilov

Table of contents

A Word to the Reader	7
1. Seismic Reflection Method – Foundation of Subsurface Structure Remote Sensing	13
1.1. Was the CDP method a revolution in seismology?	13
1.2. What May Remain In the Seismic Time Section After All Processing Procedures have been Applied?	14
1.3. Basic Concepts of Modern Seismic Processing Flow	16
1.4. What Is the Best Route from Time to Depth?	19
1.5. Inverse Amplitude Problem – Are There Too Many Unsatisfiable Conditions?	22
1.6. The Legend of Convolution and Acoustic Impedance	23
1.7. Seismic Inversions: Door to the Truth?	26
1.8. Calculating the Absorption Parameters of Reflected Waves	29
1.9. Calculation of scattering characteristics of seismic waves by CDP gathers	34
1.10. Attributes of Hilbert Transform	36
1.11. Modelling Seismic Attributes in the Simplest Thin-Layer Media Case	40
1.12. AVO-attributes: Phenomenon or Myth?	49
1.13. Seismic Facies: Fantasy and Reality	53
1.14. Seismic-based Tracing of Tectonic Faults	55
1.15. Fracture Assessment on the Seismic Data: Desirable or Real?	59
1.16. Shear and Converted Waves in Seismic Surveys: Expectations and Challenges	61
1.17. Some Specialists Claim That Seismics Provide the Reliable Assessment of Abnormally Pressured Zones Distribution	64
1.18. Does 3D Seismology Always Provide a Considerable Gain in Comparison With 2D?	67
1.19. Sometimes, one can try to evaluate velocities by the features of amplitude versus time drop	73
2. Principles of Multidimensional Analysis of Seismic Attributes	77
2.1. One Attribute is Good but Ten are Better	78
2.2. Representation of Geological and Geophysical Data for Digital Analysis	79
2.3. Factor Analysis: Decreasing the “Dimensionality of Attributes Space”	82
2.4. Hierarchical Cluster Analysis: Recognizing Classes and Sub-classes in the Wavefield Without Training	90
2.5. Multi-dimensional Regression and Cluster Analysis “With Training” Shows Great Promise	93
2.6. Combined Technology of Factor and Supervised Cluster Analysis for Rock Types Classification over the Seismic Time Sections	97

Table of contents

2.7.	Neural-like Algorithms of Multi-Dimensional Attribute Analysis	99
2.8	More Examples of Application of the Various Multi-attribute Analysis Methods for Solving Different Geological Problems	104
2.9.	Software System for Seismic Attributes Interpretation ATTRCAR	110
2.10.	<i>Comparison of Alternative Methods of Multi-Attribute Analysis</i>	111
2.11.	The New Sight of Seismic Facies through the Perspective of Multi-Dimensional Analysis of Seismic Attributes	117
2.12.	Is Everything So Fine With Seismic Attributes?	118
2.13.	Seismic Inversion Revisited	119
2.13.1	Inversion: Problem Statement and Ways of Solution	120
2.13.2	Preparation of Input Data	122
2.13.3.	Acoustic Case: Inversion of Full-Fold Stacks	124
2.13.4.	Elastic Case: Inversion of Partial Stacks	131
3.	Geological Modelling and Oil & Gas Reserves Assessment with the Use of the CMP Seismic Method	139
3.1.	What is meant by Geological Modelling?	139
3.2.	Key Components of the Process of Building a Geological Model	141
3.3.	Obtaining Structural Frame from Seismics	144
3.4.	Resolution of Seismics and Level of Detail of the Field Geological Model	146
3.5.	Prediction of Reservoir Parameters by Seismic Data and Incorporating Them into the Geological Model	150
3.6.	Application of Geostatistics in Geological Modelling	153
3.7.	What is the Way to Estimate Oil and Gas Reserves?	155
3.8.	Overview of Categories of Hydrocarbons Resources and Reserves. How Long Will it Take to Move to the New Classification System?	160
3.9.	Why Should We Have to Approve Reserves in SRC? What Should We Use to Build Geological Models?	167
3.10.	About the Accuracy of Reserves Assessment and Place of Probabilistic Estimates	169
3.11.	A Bit of Errors Statistics in Reserves Assessment	177
3.12.	How Did We Build the Model of the Famous Schtockman?	182
4.	From Geological Model to Field Production Potential and Reservoir Engineering	189
4.1.	Basic Concepts of Field Hydrodynamic Model	189
4.2.	Principles of Estimation of Oil and Gas Fields Performance	191
4.2.1.	Principles of Estimation of Oilfield Performance	192
4.2.2.	Principles of Estimation of Gas Field Performance	195
4.3.	Estimation of Production Parameters for Hydrocarbon Deposits in the Context of Raw Data Uncertainty	197
5.	Geological and Economic Modelling: Feasibility Study of Further Exploration and Development	203
5.1.	How Long Should We Explore? Until all the Money Has Been Spent?	203
5.2.	Subsurface: Subject of Cost Valuation	205

Table of contents

5.3.	Hydrocarbons of Commercial Categories: Methodology of Preparation with the Use of Seismics	207
5.4.	Exploration and Development of the Hydrocarbon Field: Main Aspects of Financial Viability	211
5.4.1.	The concept of discounting	211
5.4.2.	Accidence of theory of cash flows	212
5.4.3.	Assessment of investment projects: static and dynamic methods	214
5.5.	Cash flow in the engineering design of oil and gas exploration, prospecting and development: conceptual model	222
5.6.	Creating a simple program for the estimation of economic efficiency parameters in MS Excel	226
5.7.	Decision making according to economic indicators: major criteria	229
5.7.1.	Estimate of economically allowable value of initial payment for the right of use of a subsurface site	229
5.7.2.	«E&P margin» as reasonability indicator for further E&P works	231
5.7.3.	Technical and economical feasibility study of oil and gas recovery efficiency	233
5.8.	Risk and uncertainty analysis at economic appraisal	235
5.8.1.	Types of risks in geological and economic estimates	235
5.8.2.	The main ways to deal with uncertainty and risk	236
5.9.	Ranking economic appeal of objects intended for further exploration	246
6.	What is coming? (unsolved problems and further prospects for the methodology of hydrocarbon fields research)	251
6.1.	Seismics: crisis or progressive advance?	251
6.2.	Problems in building fields' geological engineering models: how to solve them?	255
6.3.	Geological and economic modelling and subsurface cost estimate: have all issues been addressed?	257
6.4.	Will we assemble the parts into a united technological chain?	259
	Conclusion	261
	Bibliography	263
	Appendices	273
