Contents

Preface	xiii
About the Editor	xv
List of Contributors	xvii
PART I	1
1 Introductory Overview	3
<i>David Plackett</i>	
1.1 Introduction	3
1.2 Worldwide Markets for Films and Coatings	4
1.2.1 Total Polymer Production and Use	4
1.2.2 Total Production and Use of Plastic Films	5
1.2.3 Coatings	7
1.3 Sustainability	8
1.4 Bio-Derived Polymers	9
1.5 Other Topics	12
References	13
2 Production, Chemistry and Degradation of Starch-Based Polymers	15
<i>Analía Vázquez, María Laura Foresti and Viviana Cyras</i>	
2.1 Introduction	15
2.2 Gelatinization	18
2.3 Effect of Gelatinization Process and Plasticizer on Starch Properties	19
2.4 Retrogradation	22
2.5 Production of Starch–Polymer Blends	23
2.6 Biodegradation of Starch-Based Polymers	27
2.7 Concluding Remarks	35
2.8 Acknowledgement	39
References	39

3	Production, Chemistry and Properties of Polylactides	43
	<i>Anders Södergård and Saara Inkinen</i>	
3.1	Introduction	43
3.2	Production of Polylactides	44
	3.2.1 Lactic Acid and its Production	44
	3.2.2 Production Methods for Polylactide	45
3.3	Polylactide Chemistry	49
	3.3.1 Tacticity	49
	3.3.2 Molecular Weight and its Distribution	50
	3.3.3 Conversion and Yield	50
	3.3.4 Copolymerization	51
	3.3.5 Characterization of Lactic Acid Derivatives and Polymers	52
3.4	Properties of Polylactides	54
	3.4.1 Processability	54
	3.4.2 Thermal Stability	55
	3.4.3 Hydrolytic Stability	56
	3.4.4 Thermal Transitions and Crystallinity of PLA	56
	3.4.5 Barrier and Other Properties	57
3.5	Concluding Remarks	59
	References	60
4	Production, Chemistry and Properties of Polyhydroxyalkanoates	65
	<i>Eric Pollet and Luc Avérous</i>	
4.1	Introduction	65
4.2	Polyhydroxyalkanoate Synthesis	67
	4.2.1 Background	67
	4.2.2 Bacterial Biosynthesis of Polyhydroxyalkanoates	68
	4.2.3 Production of Polyhydroxyalkanoates by Genetically Modified Organisms	71
	4.2.4 Chemical Synthesis of Polyhydroxyalkanoates	72
4.3	Properties of Polyhydroxyalkanoates	72
	4.3.1 Polyhydroxyalkanoate Structure and Mechanical Properties	72
	4.3.2 Polyhydroxyalkanoate Crystallinity and Characteristic Temperatures	74
4.4	Polyhydroxyalkanoate Degradation	74
	4.4.1 Hydrolytic Degradation of PHAs	74
	4.4.2 Biodegradation of PHAs	75
	4.4.3 Thermal Degradation of PHAs	76
4.5	PHA-Based Multiphase Materials	77
	4.5.1 Generalities	77
	4.5.2 PHA Plasticization	77
	4.5.3 PHA Blends	78
	4.5.4 PHA-Based Multilayers	78
	4.5.5 PHA Biocomposites	79
	4.5.6 PHA-Based Nano-Biocomposites	80
4.6	Production and Commercial Products	81
	References	82

5 Chitosan for Film and Coating Applications	87
<i>Patricia Fernandez-Saiz and José M. Lagaron</i>	
5.1 Introduction	87
5.2 Physical and Chemical Characterization of Chitosan	88
5.2.1 Degree of N-acetylation	88
5.2.2 Molecular Weight	89
5.2.3 Solvent and Solution Properties	89
5.3 Properties and Applications of Chitosan	89
5.3.1 Waste/Effluent Water Purification	90
5.3.2 Cosmetics	90
5.3.3 Fat Trapping Agent	90
5.3.4 Pharmaceutical and Biomedical Applications: Controlled Drug Release, Tissue Engineering	90
5.3.5 Antimicrobial Properties and Active Packaging Applications	91
5.3.6 Agriculture	94
5.3.7 Biosensors – Industrial Membrane Bioreactors and Functional Food Processes	95
5.3.8 Other Applications of Chitosan-Based Materials in the Food Industry	95
5.4 Processing of Chitosan	97
5.5 Concluding Remarks	98
References	99
6 Production, Chemistry and Properties of Proteins	107
<i>Mikael Gällstedt, Mikael S. Hedenqvist and Hasan Ture</i>	
6.1 Introduction	107
6.2 Plant-Based Proteins	108
6.2.1 Rapeseed	108
6.2.2 Wheat Gluten	109
6.2.3 Corn Zein	109
6.2.4 Soy Protein	110
6.2.5 Kafirin (Grain Sorghum)	111
6.2.6 Oat Avenin	111
6.2.7 Rice Bran Protein (RBP)	111
6.2.8 Lupin	111
6.2.9 Cottonseed Proteins	112
6.2.10 Peanut Protein	113
6.3 Animal-Based Proteins	113
6.3.1 Whey Protein	113
6.3.2 Casein	114
6.3.3 Egg White	115
6.3.4 Keratin	115
6.3.5 Collagen	115
6.3.6 Gelatin	115
6.3.7 Myofibrillar Proteins	116

6.4	Solution Casting of Proteins – an Overview	117
6.4.1	Solvent Casting Procedures	117
6.4.2	Importance of pH	118
6.4.3	Drying Conditions	118
6.4.4	Viscosity	119
6.4.5	Importance of Temperature	119
6.4.6	Selection of Solvent	119
6.4.7	Plasticizers for Protein Films and Coatings	119
6.4.8	Proteins as Coatings and in Composites	120
6.4.9	Water Sensitivity of Protein Films	121
6.5	Dry Forming of Protein Films	121
6.5.1	Compression Moulding	121
6.5.2	Properties of Compression-Moulded Protein-Based Films	122
6.5.3	Extrusion and Injection Moulding	125
6.6	Concluding Remarks	128
	References	129
7	Synthesis, Chemistry and Properties of Hemicelluloses	133
	<i>Ann-Christine Albertsson, Ulrica Edlund and Indra K. Varma</i>	
7.1	Introduction	133
7.2	Structure	134
7.3	Sources	137
7.3.1	Species	138
7.3.2	Distribution	140
7.3.3	Co-Constituents	141
7.4	Extraction Methodology	141
7.5	Modifications	143
7.5.1	Esterification	143
7.5.2	Etherification	144
7.5.3	Miscellaneous Treatments	145
7.6	Applications	146
7.7	Concluding Remarks	147
	References	148
8	Production, Chemistry and Properties of Cellulose-Based Materials	151
	<i>Mohamed Naceur Belgacem and Alessandro Gandini</i>	
8.1	Introduction	151
8.2	Pristine Cellulose as a Source of New Materials	154
8.2.1	All-Cellulose Composites	154
8.2.2	Cellulose Nano-Objects	154
8.2.3	Model Cellulose Films	159
8.3	Novel Cellulose Solvents	160
8.4	Cellulose-Based Composites and Superficial Fiber Modification	162
8.4.1	Composites with Pristine Fibers	162
8.4.2	Superficial Fiber Modification	165
8.5	Cellulose Coupled with Nanoparticles	172
8.6	Electronic Applications	172

8.7	Biomedical Applications	173
8.8	Cellulose Derivatives	173
8.9	Concluding Remarks	174
	References	174
9	Furan Monomers and their Polymers: Synthesis, Properties and Applications	179
	<i>Alessandro Gandini</i>	
9.1	Introduction	179
9.2	Precursors and Monomers	181
9.3	Polymers	183
	9.3.1 Chain-Growth Systems	186
	9.3.2 Step-Growth Systems	189
	9.3.3 The Application of the Diels–Alder Reaction to Furan Polymers	201
9.4	Biodegradability of Furan Polymers	205
9.5	Concluding Remarks	206
	References	206
	PART II	211
10	Food Packaging Applications of Biopolymer-Based Films	213
	<i>N. Gontard, H. Angellier-Coussy, P. Chalier, E. Gastaldi, V. Guillard, C. Guillaume and S. Peyron</i>	
10.1	Introduction	213
10.2	Food Packaging Material Specifications	214
	10.2.1 Functional Properties	214
	10.2.2 Safety Issues	216
	10.2.3 Environmental Aspects	218
10.3	Examples of Biopolymer Applications for Food Packaging Materials	220
	10.3.1 Short Shelf-Life Fresh Food Packaging	220
	10.3.2 Long Shelf-Life Dry or Liquid Food Packaging	221
10.4	Research Directions and Perspectives	222
	10.4.1 Improving/Modulating Functional Properties	222
	10.4.2 Active Biopolymer Packaging	223
	10.4.3 Improving Safety and Stability	224
	10.4.4 Towards an Integrated Approach for Biopolymer-Based Food Packaging Development	225
10.5	Concluding Remarks	227
	References	228
11	Biopolymers for Edible Films and Coatings in Food Applications	233
	<i>Idoya Fernández-Pan and Juan Ignacio Maté Caballero</i>	
11.1	Introduction	233
11.2	Materials for Edible Films and Coatings	236
	11.2.1 Protein-Based Films and Coatings	237

11.2.2	Polysaccharide-Based Films and Coatings	239
11.2.3	Lipid-Based Films and Coatings	241
11.2.4	Composite/Multilayer Films	242
11.2.5	Additives	243
11.3	Edible Films and Coatings for Food Applications	243
11.3.1	Edible Coatings on Fruit and Vegetables	243
11.3.2	Edible Films and Coatings on Meat and Poultry	244
11.3.3	Edible Films and Coatings on Foods with Low Water Content	246
11.3.4	Edible Coatings on Deep Fat Frying Foods	246
11.4	Concluding Remarks	247
	References	250
12	Biopolymer Coatings for Paper and Paperboard	255
	<i>Christian Aulin and Tom Lindström</i>	
12.1	Introduction	255
12.2	Biopolymer Films and Coatings	257
12.2.1	Starches	258
12.2.2	Chitosan	259
12.2.3	Hemicelluloses	263
12.2.4	Cellulose Derivatives	265
12.3	Bio-Nanocomposite Films and Coatings	267
12.3.1	Nano-Sized Clay	267
12.3.2	Nanocellulose	269
12.4	Concluding Remarks	272
12.5	Acknowledgement	272
	References	273
13	Agronomic Potential of Biopolymer Films	277
	<i>Lluís Martín-Closas and Ana M. Pelacho</i>	
13.1	Introduction	277
13.2	The Potential Role of Biodegradable Materials in Agricultural Films	278
13.3	Presently Available Biopolymers and Biocomposites	279
13.4	Past and Current International Projects on Biodegradable Agricultural Films	282
13.5	Present Applications of Biopolymer Films in Agriculture	288
13.5.1	Overview	288
13.5.2	Biodegradable Mulching	289
13.6	Potential Uses: Current Limitations and Future Applications	293
13.6.1	Solarization with Biodegradable Films	293
13.6.2	Biodegradable Low Tunnels	293
13.6.3	Fruit Protecting Bags	295
13.6.4	Future Biodegradable Film Applications	295
13.7	Concluding Remarks	296
13.8	Acknowledgements	296
	References	297

14 Functionalized Biopolymer Films and Coatings for Advanced Applications	301
<i>David Plackett and Vimal Katiyar</i>	
14.1 Introduction	301
14.2 Optoelectronics	303
14.2.1 Photovoltaics	303
14.2.2 Other Optoelectronic Devices	306
14.3 Sensors	308
14.3.1 Chemical Sensors	308
14.3.2 Biosensors	310
14.4 Miscellaneous Applications	311
14.5 Concluding Remarks	312
References	313
15 Summary and Future Perspectives	317
<i>David Plackett</i>	
15.1 Introduction	317
15.2 Bioplastics	318
15.3 Bio-Thermoset Resins	320
15.4 Nanocomposites Based on Inorganic Nanofillers	320
15.5 Nanocomposites Based on Cellulose Nanofillers	321
15.6 Concluding Remarks	322
References	322
Index	325
