

Managing Wastes from Aluminum Smelter Plants

B. Mazumder
and
B. K. Mishra

WOODHEAD PUBLISHING INDIA PVT LTD

New Delhi • Cambridge • Oxford

<i>Preface</i>		<i>vii</i>
1	Introduction	1
1.1	Introduction	1
1.2	Extraction of aluminum metal (Hall-Heroult process)	2
1.2.1	Other aluminum extraction processes	6
1.2.2	ALCOA aluminum-chloride process	6
1.2.3	Carbothermic reduction of aluminous ores	6
1.2.4	<i>The aluminum-carbide process</i>	7
1.2.5	Reduced temperature aluminum production process	7
1.3	Wire-rod drawing plant	9
2	Wastes generated by aluminum smelter plants	11
2.1	Introduction	11
2.2	Spent pot liners	11
2.3	Anode butts	16
2.4	Red mud	18
2.5	Coal rejects/carbon dusts and coal ash	29
3	Treatment of the wastes and quality of byproducts	32
3.1	Treatment of spent pot liner	32
3.2	Treatment of red-mud	48
3.3	Treatment of waste emulsion generated by wire-rod mills	55
4	Utilization of wastes (byproducts)	57
4.1	Byproducts from treatment of spent pot liner and anode-butts	57
4.1.1	Colloidal graphite and dry lubricants	57
4.1.2	Production of pyrogenic silica at relatively lower temperature	58
4.1.3	Preparation of pencil lead	59
4.1.4	Making dry cell electrodes	60

4.1.5	Production of carbon refractories	62
4.1.6	Preparation of silicon-carbide from spent pot liner	62
4.1.7	Preparation of blast furnace tap hole and runner/trough mass	67
4.1.8	Preparation of aluminum plant anodes	74
4.1.9	Absorber for heavy metals, dyes and oils	76
4.1.10	Preparation of mould coating for batch casting of iron and steel	81
4.1.11	Recovery of fluorine as aluminum fluoride	81
4.2	Utilization of red-mud	82
4.2.1	Removal of ferric oxide	84
4.2.2	Forming electroceramic bodies	85
4.2.3	Making glazes	89
4.2.4	Utilization of iron filtrate solution	91
4.2.5	Extraction of titanium	92
4.3	Utilization of coal rejects/carbon dust/coal ashes	95
4.3.1	Utilization of coal rejects and coal dusts	95
4.3.2	Utilization of coal ash	98

5 Techno-economic feasibility of some selected processes 100
