<i>Woodhead Publishing Series in Energy</i>	<i>xv</i>
Part I Overview and assessment of hydrocarbon fuel conversion processes	1
1 Characterization and preparation of biomass, oil shale and coal-based feedstocks O. TRASS, University of Toronto, Canada	3
1.1 Introduction	3
1.2 Types and properties of feedstock	4
1.3 Coal feedstock characterization and requirements	15
1.4 Coal cleaning and preparation techniques	22
1.5 Coal slurry fuels	28
1.6 Future trends	43
1.7 Sources of further information and advice	45
1.8 References	48
2 Production, properties and environmental impact of hydrocarbon fuel conversion J. G. SPEIGHT, CD & W Inc., USA	54
2.1 Introduction	54
2.2 Production of hydrocarbon fuels	58
2.3 Properties of hydrocarbon fuels	63
2.4 Use and energy efficiency	72
2.5 Environmental impact	72
2.6 Toxicity hazards	77
2.7 Future trends in fuels production and properties	80
2.8 References	82

vi	Contents	
3	Life cycle assessment (LCA) of alternative hydrocarbon fuel conversion J. M. ANDRESEN and S. LI, University of Nottingham, UK	83
3.1	Introduction	83
3.2	Life cycle assessment: environmental, energetic and techno-economic issues	84
3.3	Life cycle assessment of fuel conversion routes and alternative feedstock utilisation	86
3.4	Conclusions and future trends	97
3.5	Sources of further information and advice	98
3.6	References	98
Part II	Solid hydrocarbon fuel processing and technology	103
4	Direct liquefaction (DCL) processes and technology for coal and biomass conversion C. BURGESS CLIFFORD and C. SONG, Penn State University, USA	105
4.1	Introduction	105
4.2	Feedstocks for direct liquefaction	109
4.3	Basics of coal and biomass/lignin reaction chemistry	115
4.4	Process variables: coal rank, solvent, catalyst, temperature, pressure and residence time in direct liquefaction (DCL)	119
4.5	Known process technologies	129
4.6	Product output and quality issues	142
4.7	Process control and modeling techniques	145
4.8	Advantages and limitations	145
4.9	Future trends in direct coal liquefaction	147
4.10	Sources of further information and advice	148
4.11	References	149
5	Gasification process technology C. HIGMAN, Higman Consulting GmbH, Germany	155
5.1	Introduction	155
5.2	Gasification in the refinery environment	155
5.3	Basic principles	158
5.4	Building blocks for complete systems	173
5.5	Hydrogen and power plant as an example of a complete system	179
5.6	Advantages and limitations	182
5.7	Future trends	182
5.8	Sources of further information and advice	183
5.9	References	184

6	Pyrolysis processes and technology for the conversion of hydrocarbons and biomass J. M. ANDRESEN and XIAO Y. LIM, University of Nottingham, UK	186
6.1	Introduction	186
6.2	Applicable feedstocks	187
6.3	Process technology	189
6.4	Basic reactions	191
6.5	Thermodynamics/reaction kinetics	193
6.6	Catalyst and solvent utilization	194
6.7	Conclusion and future trends	196
6.8	References	197
7	Biomass catalysis in conventional refineries J. A. MELERO, A. GARCÍA and J. IGLESIAS, Universidad Rey Juan Carlos, Spain	199
7.1	Introduction	199
7.2	Biomass feedstock: availability and diversity	202
7.3	Catalytic cracking of biomass feedstock	204
7.4	Hydrotreating of biomass feedstock	215
7.5	Production of conventional liquid fuels from sugars	227
7.6	Future trends	231
7.7	References	233
Part III Liquid hydrocarbon fuel processing and technology		241
8	Sulfur removal from heavy and light petroleum hydrocarbon by selective oxidation M. RASHID KHAN, Saudi Aramco, Saudi Arabia and E. SAYED, Imperial College, UK	243
8.1	Introduction	243
8.2	Background	243
8.3	Oxidative desulfurization chemistry	248
8.4	Conclusions	259
8.5	References	260
9	Partial oxidation (POX) processes and technology for clean fuel and chemical production R. L. KEISKI, S. OJALA, M. HUUHTANEN, T. KOLLI and K. LEIVISKÄ, University of Oulu, Finland	262
9.1	Introduction	262
9.2	Process technology and methods of partial oxidation (POX)	264
9.3	Basic partial oxidation reactions	268
9.4	Catalysts utilized	275
9.5	Process control and modelling techniques	275

viii	Contents	
9.6	Advantages, limitations and optimization	277
9.7	Future trends	278
9.8	References	280
10	Hydroconversion processes and technology for clean fuel and chemical production	287
	P. R. ROBINSON, PQ Optimization Services, USA	
10.1	Introduction to petroleum refining	287
10.2	Environmental protection	290
10.3	Hydroconversion overview	291
10.4	Economics of hydroconversion	292
10.5	Chemistry of hydroconversion	292
10.6	Supported-metal hydroconversion catalysts	307
10.7	Commercial hydroconversion units	312
10.8	Future trends in hydroconversion	324
10.9	References	325
	Part IV Gaseous hydrocarbon fuel processing and technology	327
11	Middle distillate fuel production from synthesis gas via the Fischer-Tropsch process	329
	F. G. BOTES, L.P. DANCUART, H. G. NEL, A. P. STEYNBERG and A.P. VOGEL, Sasol Technology, South Africa, B. B. BREMAN, Sasol Technology Netherlands, The Netherlands, and J.H.M. FONT FREIDE, BP, UK	
11.1	Introduction	329
11.2	Process technology	332
11.3	Basic principles of the reaction process	339
11.4	Catalyst utilisation	343
11.5	Product upgrading and quality issues	346
11.6	Process modelling and control	350
11.7	Advantages, limitations and optimisation for synthetic middle distillate fuels	353
11.8	Future trends	355
11.9	Sources of further information and advice	357
11.10	References	358
12	Methanol and dimethyl ether (DME) production from synthesis gas	363
	D. SEDDON, Duncan Seddon & Associates Pty. Ltd, Australia	
12.1	Introduction	363
12.2	Process technology and new innovations	364
12.3	Basic principles of methanol synthesis	371

12.4	Catalysts	374
12.5	Product quality	376
12.6	Estimation of production costs	377
12.7	Future trends	381
12.8	Sources of further information and advice	382
12.9	References	382
13	Advances in water-gas shift technology: modern catalysts and improved reactor concepts E. V. REBROV, Queen's University Belfast, UK	387
13.1	Introduction	387
13.2	Modern reactor concepts	388
13.3	Advanced catalytic systems	397
13.4	Conclusions and future trends	406
13.5	References	408
14	Natural gas hydrate conversion processes M. MAX and A. H. JOHNSON, Hydrate Energy International (HEI), USA	413
14.1	Introduction	413
14.2	Factors important for hydrate conversion	416
14.3	Resource potential	423
14.4	Conversion processes	424
14.5	Advantages, limitations and optimization	430
14.6	Future trends	430
14.7	Sources of further information and advice	431
14.8	References	432
Part V	Operational issues and process improvement in hydrocarbon fuel processing plant	435
15	Environmental degradation in hydrocarbon fuel processing plant: issues and mitigation F. ROPITAL, IFP Energies Nouvelles, France	437
15.1	Introduction	437
15.2	Types of degradation and their main locations	438
15.3	Protection and mitigation technologies	450
15.4	Plant management techniques	454
15.5	Future trends	460
15.6	Sources of further information and advice	460
15.7	References	461

x	Contents	
16	Automation technology in hydrocarbon fuel processing plant S. EL FERIK, King Fahd University of Petroleum and Minerals, Saudi Arabia	463
16.1	Introduction	463
16.2	Automation technology survey: from exploration to processing	464
16.3	Fundamentals of process control	470
16.4	Control design	481
16.5	Future trends in automation technology	489
16.6	Working towards a broader integration of control and operation	490
16.7	Conclusions	493
16.8	References	494
17	Advanced process control for clean fuel production: smart plant of the future O. TAHA and M. RASHID KHAN, Saudi Aramco, Saudi Arabia	496
17.1	Introduction	496
17.2	Incentives for smart process control technologies	496
17.3	Smart instrumentation of the future	497
17.4	Advanced process control (APC) and optimization solutions	497
17.5	Model predictive control technology (MPC)	498
17.6	Real-time optimization (RTO) technology	499
17.7	Control performance monitoring (CPM)	502
17.8	Driving future innovation, sustainability and performance in process control technologies	505
17.9	References	507
18	Process modeling for hydrocarbon fuel conversion E. VASQUEZ, Maryland, USA and T. ELDREDGE, Connecticut, USA	509
18.1	Computational fluid dynamics (CFD) modeling techniques	509
18.2	Empirical modeling techniques	519
18.3	Process flow models	523
18.4	Chemical kinetic modeling	530
18.5	References	544
