<i>Preface</i>	vii
<i>List of Figures</i>	xv
<i>Acknowledgments</i>	xvii
1. Characteristic equations of first-order linear partial differential equations	1
Preliminary remarks	1
1.1 Motivational example	2
1.1.1 General and particular solutions	2
1.1.2 Characteristics	3
1.2 Directional derivatives	4
1.3 Nonlinear digression: Inviscid Burgers's equation	9
1.4 Taylor series of solutions	10
1.5 Incompatibility of side conditions	16
1.6 Semilinear equations	18
1.7 Systems of equations	23
Closing remarks	28
1.8 Exercises	30
2. Characteristic equations of second-order linear partial differential equations	47
Preliminary remarks	47
2.1 Motivational examples	48
2.1.1 Equation with directional derivative	48
2.1.2 Wave equation in one spatial dimension	53

2.1.3	Heat equation in one spatial dimension	58
2.1.4	Laplace equation in two spatial dimensions	61
2.2	Hyperbolic, parabolic and elliptic equations	62
2.3	Characteristics	64
2.3.1	Semilinear equations	64
2.3.2	Wave, heat and Laplace equations	70
2.3.3	Solution of wave equation	72
2.3.4	Systems of semilinear equations	73
2.3.5	Elastodynamic and Maxwell equations	76
2.3.6	Quasilinear equations	78
	Closing remarks	81
2.4	Exercises	82
3.	Characteristic equations of first-order nonlinear partial differential equations	97
	Preliminary remarks	97
3.1	Motivational example	98
3.2	Characteristics	99
3.3	Side conditions	105
3.4	Physical applications	105
3.4.1	Elastodynamic equations	105
3.4.2	Maxwell equations	116
	Closing remarks	117
3.5	Exercises	118
4.	Propagation of discontinuities for linear partial differen- tial equations	125
	Preliminary remarks	125
4.1	Motivational example	126
4.2	Discontinuities and frequency content	128
4.3	Asymptotic series	133
4.3.1	General formulation	134
4.3.2	Choice of asymptotic sequence	140
4.4	Eikonal equation	142
4.4.1	Derivation	142
4.4.2	Solution	144
4.5	Transport equation	145
4.5.1	Derivation	145

4.5.2	Solution	148
4.6	Higher-order transport equations	155
4.7	Physical applications	158
4.7.1	Elastodynamic equations	158
4.7.2	Maxwell equations	160
	Closing remarks	162
4.8	Exercises	164
5.	Caustics	177
	Preliminary remarks	177
5.1	Singularities of transport equations	178
5.2	Caustics as envelopes of characteristics	178
5.3	Phase change on caustics	180
5.3.1	Waves in isotropic homogeneous media	181
5.3.2	Method of stationary phase	183
5.3.3	Phase change	186
	Closing remarks	193
5.4	Exercises	194
	<i>Afterword</i>	203
	Appendix A Integral theorems	207
	Preliminary remarks	207
	A.1 Divergence Theorem	208
	A.1.1 Statement	208
	A.1.2 Plausibility argument	208
	A.2 Curl Theorem	212
	A.2.1 Statement	212
	A.2.2 Plausibility argument	213
	Closing remarks	216
	Appendix B Elastodynamic equations	217
	Preliminary remarks	217
	B.1 Cauchy's equations of motion	218
	B.2 Stress-strain equations	222
	B.3 Elastodynamic equations	223
	B.4 Scalar and vector potentials	224
	B.4.1 Isotropy and homogeneity	224
	B.4.2 Equations of motion	225

B.4.3	Scalar and vector potentials	226
B.4.4	Wave equations	227
B.5	Equations of motion versus wave equations	229
	Closing remarks	229
Appendix C	Maxwell equations <i>in vacuo</i>	231
	Preliminary remarks	231
C.1	Formulation	232
C.1.1	Fundamental equations	232
C.1.2	Coulomb's law	232
C.1.3	No-monopole law	233
C.1.4	Faraday's law	233
C.1.5	Ampère's law	234
C.1.6	Speed of light	235
C.1.7	Maxwell equations	235
C.2	Scalar and vector potentials	237
	Closing remarks	240
Appendix D	Fourier series and transforms	243
	Preliminary remarks	243
D.1	Similarity of functions	244
D.2	Fourier series	245
D.3	Fourier transform	247
	Closing remarks	250
Appendix E	Distributions	251
	Preliminary remarks	251
E.1	Definition of distributions	252
E.2	Operations on distributions	255
E.3	Symbol	258
E.4	Principal symbol	259
	Closing remarks	259
	<i>List of symbols</i>	261
	<i>Bibliography</i>	263
	<i>Index</i>	267
