CONTENTS

Session 1: High-efficiency hybrid and turbo-compound systems (turbo systems)
The impact of future engine and vehicle drivetrains on turbocharging system architecture
O Ryder, N Sharp
Design, validation, and performance results of a turbocharged turbogenerating biogas engine model
I G M Thompson, S W Spence, C D McCartan, J M H Talbot-Weiss
Approaches to energy conservation for the environment through MET turbochargers
Y Ono, M Kimura, K Shiraiishi, T Teshima

Session 2: High pressure ratio systems (turbo systems two-stage)
Boosting technology for Euro VI and Tier 4 final heavy duty diesel engines without NOx aftertreatment
A Banks, M Niven, P Andersson
Measurement of interstage losses of a two-stage turbocharger system in a turbocharger test rig
F Westin, R Burenius
Testing and qualification of two-stage turbocharging systems
G Fitzky, M Bothien, S Zbinden, E Codan, S Vögeli

Session 3: Compressor interaction
The effect of air inlet system features on automotive turbocharger compressor performance
G Capon, T Morris
Development of ported shroud compressor housing with reduced compressor blade pass source acoustic level
R P Tanna, J Yin, B Sirakov, V Barbarie
Recent challenges in the aerodynamic development of turbocharger compressors for gasoline passenger cars
H Chen

Session 4A: Compressor aerodynamic design (compressor – CFD)
Development of a high performance centrifugal compressor using a 3D inverse design technique
M Zangeneh, B Nikpour, H Watanabe
Investigation of compressor map width enhancement and the inducer flow field using a shroud bleed slot
  S Sivagnanasundaram, S Spence, J Early, B Nikpour

Surge characteristics in a ported shroud compressor using PIV measurements and large eddy simulation
  E Guillou, M Gancedo, R G DiMicco, E Gutmark, F Hellstrom, L Fuchs, A Mohamed

Session 4B: Turbine fatigue and structural

Turbine wheel high cycle fatigue reliability prediction
  A Kulkarni, D Tisserant, D Hosny, E Liang, N Krishnaraja

Impact of flange geometry on the ultimate axial load capacity of V-band clamps
  M Muller, S M Barrans

Validation of a phenomenological lifetime estimation approach for application on turbine housings of turbochargers
  F Laengler, A Scholz, H Aleksanoglu, T Mao

Thermomechanical fatigue crack growth and failure prediction for turbine housings
  S Bist, R Kannusamy, P Tayal, E Liang

Session 5A: Turbine design optimization (turbine – CFD). Part 1

The application of throughflow optimization to the design of radial and mixed flow turbines
  G D Cox, C Fischer, M V Casey

Improvement of turbine performance for small size variable geometry system turbocharger
  K Segawa, A Iwakami, S Yamaguchi, H Tange, K Kimachi

Session 5B: Compressor mechanical and rotordynamics. Part 1

Compressor wheel retention
  K Shoghi, M Becker, T Ducker, D Metz, C Oberste-Brandenburg

Low-cycle fatigue of turbocharger compressor wheels online prediction and lifetime extension
  R Christmann, F Längler, M Habermehl, P-M Fonts, L Fontvieille, P Moulin

Extension of performance maps of radial turbocharger turbines using pulsating hot gas flow
  St Reuter, A Koch, A Kaufman

Session 6A: Turbine design optimization (turbine – CFD). Part 2

Assessment of heat transfer effects on the performance of a radial turbine using large eddy simulation
  F Hellstrom, L Fuchs
Influence of tip-gap losses on the stage efficiency of downsizing turbocharger turbines
   J Kammeyer, C Natkaniec, J R Seume
   293

Numerical analysis on aerodynamic effects of impeller back cavity and disk shape of radial turbine
   I Morita, H Tamaki, M Unno, T Kawakubo
   307

Session 6B: Compressor mechanical and rotordynamics. Part 2

Multi-variable bearing system design optimization for passenger vehicle turbochargers
   A Bhattacharya, T V Barbarie
   317

Rotordynamic characterization and comparison of turbocharger bearing systems
   A D Kelly
   325

Rotor dynamic analysis of a passenger car turbocharger using run-up simulation and bifurcation theory
   U Tomm, A Boyaci, C Proppe, W Seemann, L Esmaeil, B Schweizer
   335

Session 7: Turbine unsteady flow measurements (turbine – pulsed flow)

Turbocharger turbine pulse flow performance and modelling
   25 years on
   N C Baines
   347

A pulsating flow rig for analyzing turbocharger performance
   F Laurantzon, N Tillmark, P H Alfredsson
   363

Experimental investigation into the pulsating flow performance of a turbocharger turbine in the closed and open waste-gate region
   M Capobianco, S Marelli
   373

Turbine performance studies for automotive turbochargers. Part 2: unsteady analysis
   A Romagnoli, R F Martinez-Botas, S Rajoo
   387

Session 8: Advancing the 1-D simulation and validation

Method of performance measurement for low turbocharger speeds
   T Otobe, P Grigoriadis, M Sens, R Berndt
   409

The passive acoustic effect of turbo-compressors
   H Rämml, J Galindo
   421

Turbine performance studies for automotive turbochargers. Part 1: steady analysis
   A Romagnoli, R F Martinez-Botas, S Rajoo
   431

Design and development of a turbo-expander for charge air cooling
   C D Whelan, R A Richards, S W Spencer, A Young
   459
