# Contents

*Preface to the Second Edition* xiii

<b>1. Introduction to the Global Environment: The Water and Energy Cycles and Atmospheric and Oceanic Circulation</b>	<b>1</b>
Introduction	1
The Global Water Cycle	2
Major Water Masses	2
Fluxes between Reservoirs	2
Geographic Variations in Precipitation and Evaporation	4
The Energy Cycle	7
Introduction	7
Radiation and Energy Balance	7
Variations in Solar Radiation: The Atmospheric and Oceanic Heat Engine	11
Circulation of the Atmosphere	14
Oceanic Circulation	16
Introduction	16
Wind-Driven (Shallow) Circulation	17
Coastal Upwelling	19
Thermohaline (Deep) Circulation	19
<b>2. Air Chemistry: The Greenhouse Effect and the Ozone Hole</b>	<b>24</b>
Atmospheric Gases	24

Carbon Dioxide	26
Present and Future CO <sub>2</sub> and the Surficial Carbon Cycle	26
Past CO <sub>2</sub> Levels	36
Other Greenhouse Gases: Methane, Nitrous Oxide	39
Other Greenhouse Gases: Halogens and Tropospheric Ozone	46
Radiative Forcing by Anthropogenic Factors	47
Climatic Effects of Radiative Forcing: Climate Sensitivity, Global Warming, and Hydrologic Changes	48
Observed Changes in Temperature and Atmospheric Circulation	50
Observed Changes in the Water Cycle: Water Vapor, Precipitation, Streamflow, and Storms	52
Observed Changes in Ice, Sea Level and the Oceans	54
Predictions for Future Climate Change	57
Aerosols	59
Aerosol Cloud Effects	60
Types of Aerosols	61
Gaseous Emissions	62
Sulfate Aerosols	62
Black Carbon Aerosols	63
Organic Carbon Aerosols	65
Biomass Burning Aerosols	65
Nitrate Aerosols	65
Mineral Dust Aerosols	66
Sea-Salt Aerosols	67
Surface Dimming by Aerosols	68
Aerosols and the Hydrologic Cycle	68
Black Carbon Aerosols and Snow Cover	69
Ozone and the Ozone Hole	69
Stratospheric Ozone: The Ozone Hole	70
Tropospheric Ozone: Air Pollution	76
<b>3. Air Chemistry: Rainwater, Acid Rain, and the Atmospheric Cycles of Sulfur and Nitrogen</b>	79
Introduction	79
Formation of Rain (and Snow)	80
Water Vapor in the Atmosphere	80
Condensation	83
Sublimation	84
Rain (and Snow) Formation	84
Air Motion in Cloud Formation	85
Chemical Composition of Rainwater: General Characteristics	85
Cl <sup>-</sup> , Na <sup>+</sup> , Mg <sup>++</sup> , Ca <sup>++</sup> and K <sup>+</sup> in Rain	92

Gases and Rain	102
Sulfate in Rain: The Atmospheric Sulfur Cycle	102
Sea-Salt Sulfate	103
U.S. Sulfur Emissions	104
Conversion of Sulfur Dioxide to Sulfate in Rain	107
Biogenic Reduced Sulfur	108
Other Sulfur Sources: Biomass Burning, Volcanism, and Soil Dust	109
Sulfur Deposition on Land	110
Anthropogenic Sulfur Deposition in the United States	111
Atmospheric Sulfur Cycle: Human Perturbation	113
Radiative Forcing from Sulfate Aerosol	115
The Atmospheric Nitrogen Cycle and Nitrogen in Rain	116
N <sub>2</sub> , Nitrogen Fixation, Denitrification, and Total Nitrogen Fluxes	116
Nitrogen Cycle: Anthropogenic Changes and Climate	120
Atmospheric NO <sub>x</sub> and Nitrate in Rain	120
Nitrate in Rain: Anthropogenic Sources	123
Nitrate Deposition in Rain and the Nitrate-Nitrogen Cycle	126
Ammonium in Rain: Atmospheric Ammonium-Nitrogen Cycle	130
Ammonium in Rain	133
Reactive N Deposition	135
Acid Rain	137
The pH of Natural Rainwater	138
Acid Rain from Pollution	140
Acid Rain in Europe	141
Acid Rain in the United States from 1955 to 1985	142
Acid Deposition Changes in the United States from 1980 to 2007	144
Acid Rain in Other Parts of the World	145
Distinguishing Naturally Acid Rain from That Due to Pollution	146
Effects of Acid Rain	149
<b>4. Chemical Weathering: Minerals, Plants, and Water Chemistry</b>	<b>151</b>
Introduction	151
Biogeochemical Cycling in Forests	153
Soil Water and Microorganisms: Acid Production	158
Chemical Weathering	159
Minerals Involved in Weathering	159
Silicate Weathering Reactions: Secondary Mineral Formation	162
Mechanism of Silicate Dissolution	168
Rate of Silicate Weathering	171
Silicate Weathering: Soil Formation	176
Carbonate Weathering	178
Sulfide Weathering	179
Groundwaters and Weathering	181
Garrels's Model for the Composition of Groundwaters from Igneous rocks	182

<b>5. Rivers</b>	185
Introduction	185
Components of River Water	185
River Runoff	186
Major World Rivers	188
Suspended Matter in Rivers	190
Amount of Suspended Matter	190
Human Influence	195
Chemical Composition of Suspended Matter	198
Chemical Composition of Rivers	201
World Average River Water	201
Chemical Classification of Rivers	202
Relief and River-Water Composition	212
Major Dissolved Components of River Water	213
Chloride and Cyclic Salt	213
Sodium	216
Potassium	217
Calcium and Magnesium	219
Bicarbonate ( $\text{HCO}_3^-$ )	220
Silica	222
Sulfate	227
Sulfate Pollution and Acidic Rivers	229
Organic Matter in Rivers: Organic Acidity	232
Organic Acid Rivers	236
Chemical and Total Denudation of the Continents as Deduced from River-Water Composition	237
Nutrients in River Water	241
Nitrogen in Rivers: The Terrestrial Nitrogen Cycle	242
Reactive Nitrogen Deposition and River Transport in the United States	249
Phosphorus in Rivers: The Terrestrial Phosphorus Cycle	250
<b>6. Lakes</b>	257
Physical Processes in Lakes	257
Water Balance	257
Thermal Regimes and Lake Classification	259
Lake Models	264
Biological Processes in Lakes as They Affect Water Composition	269
Photosynthesis, Respiration, and Biological Cycling	269
Eutrophication	272
Limiting Nutrients	275
Sources of Phosphorus in Lakes	279
Pollutive Changes in Major Lakes: Potential Loading	285

Acid Lakes	287
Changes in Acid Lakes in the Northeastern and Upper Midwestern United States	291
Changes in Acid Lakes in Europe	292
Naturally Acid Lakes	293
Chemical Composition of Acid Lakes	294
Saline and Alkaline Lakes	298
<b>7. Marginal Marine Environments: Estuaries</b>	<b>303</b>
Introduction	303
Estuaries: Circulation and Classification	303
The Black Sea	307
Estuarine Chemistry: Conservative vs Nonconservative Mixing	308
Estuarine Chemical Processes	311
Inorganic (Nonbiogenic) Removal in Estuaries	311
Biogenic Nutrients in Estuaries	314
Limiting Nutrients: Nitrogen, Phosphorus, and Silica	317
Eutrophication from Nutrient Pollution of Estuaries	321
Coastal Hypoxia from Nutrient Loading and Eutrophication	324
Harmful Algal Blooms and Eutrophication	329
Suspended Sediment Deposition in Marginal Marine Environments	330
Antiestuaries and Evaporite Deposition	335
<b>8. The Oceans</b>	<b>339</b>
Introduction	339
Chemical Composition of Seawater	339
pH and the Human Acidification of the Oceans	343
Modeling Seawater Composition	344
Sillén's Equilibrium Model	344
Oceanic Box Models	345
Continuum Models	347
Energy Sources for Chemical Reactions	347
Major Processes of Seawater Modification	348
Biological Processes	349
Volcanic-Seawater Reaction	360
Interaction with Detrital Solids	365
Chemical Budgets for Individual Elements	369
Summary of Processes	369
Chloride	370
Sodium	371
Sulfur	372

xii • Contents

Magnesium	374
Potassium	375
Calcium	376
Bicarbonate	381
Silica	382
Phosphorus	384
Nitrogen	386
