Structural Fire Engineering

Tom Lennon
Principal Consultant, Structural Fire Engineering,
BRE Fire and Security, UK
Contents

Preface vii
Acknowledgements ix

01 Introduction 1
References 5

02 Regulatory requirements 7
2.1. Historical background 7
2.2. Building regulations and associated guidance 8
2.3. Regulatory Reform (Fire Safety) Order 10
References 14

03 Fire test and assessment procedures 15
3.1. Reaction to fire 15
3.2. Fire resistance 25
3.3. External wall construction 32
References 35

04 Structural fire engineering design 39
4.1. Compartment time–temperature response 40
4.2. Heat transfer 56
4.3. Load effects at the fire limit state 68
References 72

05 Fire engineering design of concrete structures 75
5.1. Introduction 75
5.2. Available options 75
5.3. Comparison with BS 8110 76
5.4. Worked example 80
5.5. Spalling 88
References 92

06 Fire engineering design of steel structures 93
6.1. Introduction 93
6.2. Available options 94
6.3. Comparison with BS 5950 Part 8 94
6.4. Worked examples 96
6.5. Design guidance 101
References 103

07 Fire engineering design of composite steel and concrete structures 105
7.1. Introduction 105
7.2. Available options 105
References 118

08 Fire engineering design of timber, masonry and aluminium structures 119
8.1. Introduction 119
8.2. Fire engineering design of timber structures 119
8.3. Fire engineering design of masonry structures 125
8.4. Fire engineering design of aluminium structures 128
References 130
