Preface v

1. Introduction 1

2. Physical Principles of Ionic Polymer-Metal Composites 5
   2.1 Introduction ........................................... 5
   2.2 Manufacturing IPMC Materials ......................... 6
   2.3 IPMC Electrode Selection and Associated Electrode Models .............. 9
      2.3.1 Palladium-buffered Pt electrodes ............... 9
      2.3.2 Electrode effect on mechanical and thermal behavior .................. 16
      2.3.3 Electrode modeling ................................ 22
   2.4 Actuation Behavior and Mechanism of IPMCs .................. 31
      2.4.1 Back relaxation phenomenon ..................... 32
      2.4.2 Electrochemical study of the IPMCs .......... 35
      2.4.3 Low-temperature characteristics of IPMCs 38
   2.5 More Complex Configurations of IPMC Actuators ........ 40
      2.5.1 Equivalent modeling of IPMCs based on beam theories ............... 42
      2.5.2 3D full-scale physical model of patterned IPMCs . 46
      2.5.3 IPMCs as linear actuators ..................... 51
      2.5.4 IPMC-based actuators in multi-layer configurations 54

3. New IPMC Materials and Mechanisms 59
   3.1 Multi-Field Responsive IPMCs ......................... 59

</table>
5.6.2 Experimental model validation .................................. 144
5.7 Nonlinear Mechanics-Motivated Torsional Actuator .......... 145
5.7.1 Nonlinear mechanical model ................................. 145
5.7.2 Actuator fabrication ........................................... 148
5.7.3 Experimental results .......................................... 148

6. Synthetic Dielectric Elastomer Materials .......................... 153
   6.1 Introduction .................................................. 153
   6.2 Requirements of Dielectric Elastomer Actuator .............. 154
   6.3 Synthetic Elastomer ........................................... 156
      6.3.1 Material preparation ................................... 156
      6.3.2 Comparisons of primary material properties ........... 156
      6.3.3 Experimental evaluations ................................ 159
   6.4 Effects of Additives on Actuating Performance .............. 166
      6.4.1 The proposed additives ................................ 167
      6.4.2 Flow chart to modify the synthetic elastomer .......... 167
      6.4.3 Experimental results and discussions ................... 168
      6.4.4 Elastic modulus ......................................... 169
      6.4.5 Stress relaxation ....................................... 171
      6.4.6 Dielectric constant and dissipation factor ............ 172
      6.4.7 Actuation measurement ................................ 172
      6.4.8 Electric field strength ................................ 174
      6.4.9 Discussion .............................................. 176
   6.5 Discussion .................................................... 177

7. Dielectric Elastomer Actuator ...................................... 179
   7.1 Introduction .................................................. 179
   7.2 Multi-Stacked Actuator ...................................... 180
      7.2.1 The actuation principle ................................ 180
      7.2.2 Effects of boundary on actuation performance ........ 181
      7.2.3 Design of multi-stacked Actuator ....................... 182
      7.2.4 Fabrication ............................................. 187
      7.2.5 Experiments .............................................. 190
   7.3 Controller of multi-stacked actuator ......................... 194
      7.3.1 Design of the PWM-PID controller ....................... 194
      7.3.2 Implementation of hardware ............................ 195
      7.3.3 Experimental results ................................... 197
   7.4 Discussion .................................................... 199
8. Integrated Sensory Feedback for EAP Actuators

8.1 Introduction .................................................. 201
8.2 Basic IPMC-PVDF Sensori-Actuator Structure ............. 202
8.2.1 IPMC-PVDF structure and sensing circuit ............... 202
8.2.2 Multilayer mechanical analysis ......................... 204
8.2.3 Compensation of feedthrough coupling ................... 207
8.3 Application to Microinjection of Drosophila Embryos .... 210
8.4 Simultaneous Sensing of Displacement and Force .......... 211
8.4.1 Differential sensing configuration ....................... 213
8.4.2 Experimental characterization of sensor performance .... 215
8.4.3 PVDF-based micro-force sensor ......................... 217
8.5 Demonstration in Feedback Control Experiments .......... 218
8.6 Self-sensing Behavior of IPMCs ........................... 219

9. Device and Robotic Applications of EAPs

9.1 Modeling of IPMC-actuated Robotic Fish ................. 225
9.1.1 Overview of the modeling approach ...................... 227
9.1.2 IPMC beam dynamics in fluid .......................... 229
9.1.3 The actuation model of the hybrid tail ................. 230
9.1.4 Experimental validation of the speed model .......... 232
9.2 IPMCs as Energy Harvesters ................................ 235
9.2.1 Electro-mechanical coupling ............................. 235
9.2.2 Experiments .............................................. 237
9.2.3 Battery charging results ................................. 238
9.3 IPMC Actuator-driven Valveless Micropump ............... 241
9.3.1 IPMC diaphragm ........................................ 242
9.3.2 Nozzle/diffuser design and flow rate estimation ....... 245
9.4 PPy Petals-actuated Micropump ........................... 248
9.4.1 Design, fabrication, and modeling of the pump ...... 249
9.4.2 Experimental results .................................... 250
9.5 Multi-jointed Robotic Finger Driven by Dielectric Elastomer Actuator ...................................... 253
9.5.1 Design of multi-jointed robot finger ................. 254
9.5.2 Control of the robotic finger .......................... 264
9.5.3 Discussion ............................................... 266
