<i>Preface</i>	<i>xxv</i>

Part I Functional materials for solar power

1	Silicon-based photovoltaic solar cells	3
	N. E. B. COWERN, Newcastle University, UK	
1.1	Introduction	3
1.2	Polysilicon production	5
1.3	Crystallisation and wafering	8
1.4	Solar cells: materials issues and cell architectures	14
1.5	Conclusions	18
1.6	References	19
2	Photovoltaic (PV) thin-films for solar cells	22
	S. J. C. IRVINE, Glyndŵr University, UK	
2.1	Introduction	22
2.2	Amorphous silicon thin-film photovoltaic (PV)	27
2.3	Cadmium telluride thin-film PV	29
2.4	Copper indium diselenide thin-film PV	33
2.5	Materials sustainability	35
2.6	Future trends	37
2.7	Sources of further information and advice	38
2.8	References	39
3	Rapid, low-temperature processing of dye-sensitized solar cells	42
	P. J. HOLLIMAN, A. CONNELL and M. L. DAVIES, Bangor University, UK and M. J. CARNIE and T. M. WATSON, Swansea University, UK	

3.1	Introduction to dye-sensitized solar cells (DSCs)	42
3.2	Manufacturing issues	44
3.3	Sensitization	47
3.4	Electrodes	50
3.5	Electrolyte	53
3.6	Quality control (QC)/lifetime testing	56
3.7	Conclusions and future trends	59
3.8	Acknowledgements	60
3.9	References	60
4	Thermophotovoltaic (TPV) devices: introduction and modelling	67
	R. J. NICHOLAS and R. S. TULEY, University of Oxford, UK	
4.1	Introduction to thermophotovoltaics (TPVs)	67
4.2	Practical TPV cell performance	71
4.3	Modelling TPV cells	73
4.4	Tandem TPV cells	82
4.5	Conclusions	83
4.6	References	84
5	Photoelectrochemical cells for hydrogen generation	91
	K. G. U. WIJAYANTHA, Loughborough University, UK	
5.1	Introduction	91
5.2	Photoelectrochemical cells: principles and energetics	92
5.3	Photoelectrochemical cell configurations and efficiency considerations	99
5.4	Semiconductor photoanodes: material challenges	103
5.5	Semiconductor photocathodes: material challenges	111
5.6	Advances in photochemical cell materials and design	113
5.7	Interfacial reaction kinetics	118
5.8	Future trends	127
5.9	Acknowledgements	132
5.10	References	133
5.11	Appendix: abbreviations	143
Part II Functional materials for hydrogen production and storage		
6	Reversible solid oxide electrolytic cells for large-scale energy storage: challenges and opportunities	149
	B. YILDIZ, Massachusetts Institute of Technology, USA	

6.1	Introduction to reversible solid oxide cells	149
6.2	Operating principles and functional materials	152
6.3	Degradation mechanisms in solid oxide electrolysis cells	157
6.4	Research needs and opportunities	166
6.5	Summary and conclusions	171
6.6	References	173
7	Membranes, adsorbent materials and solvent-based materials for syngas and hydrogen production	179
	S. J. DOONG, UOP, a Honeywell Company, USA	
7.1	Introduction	179
7.2	H ₂ -selective membrane materials	181
7.3	CO ₂ -selective membrane materials	191
7.4	Adsorbent materials for H ₂ /CO ₂ separation	196
7.5	Solvent-based materials for H ₂ /CO ₂ separation	199
7.6	Future trends	200
7.7	Sources of further information and advice	202
7.8	References	203
8	Functional materials for hydrogen storage	217
	M. FELDERHOFF, Max-Planck-Institut für Kohlenforschung, Germany	
8.1	Introduction	217
8.2	Hydrogen storage with metal hydrides: an introduction	218
8.3	Hydrogen storage with interstitial hydrides, AlH ₃ and MgH ₂	220
8.4	Hydrogen storage with complex metal hydrides	224
8.5	Hydrogen storage using other chemical systems	229
8.6	Hydrogen storage with porous materials and nanoconfined materials	233
8.7	Applications of hydrogen storage	237
8.8	Conclusions	240
8.9	References	241
Part III	Functional materials for fuel cells	
9	The role of the fuel in the operation, performance and degradation of fuel cells	249
	D. J. L. BRETT, University College London, UK and Imperial College London, UK, E. AGANTE, N. P. BRANDON	

and E. BRIGHTMAN, Imperial College London, UK,
 R. J. C. BROWN, National Physical Laboratory, UK,
 M. MANAGE, University College London, UK and
 I. STAFFELL, University of Birmingham, UK

9.1	Introduction	249
9.2	Thermodynamics of fuel cell operation and the effect of fuel on performance	252
9.3	Hydrocarbon fuels and fuel processing	256
9.4	Methanol	262
9.5	Other fuels	265
9.6	Deleterious effects of fuels on fuel cell performance	267
9.7	Conclusions	274
9.8	Acknowledgements	274
9.9	References	274
10	Membrane electrode assemblies for polymer electrolyte membrane fuel cells K. SCOTT, Newcastle University, UK	279
10.1	Introduction	279
10.2	Requirements for membrane electrode assemblies (MEAs)	280
10.3	Porous backing layer materials	282
10.4	Membrane materials	290
10.5	MEA electrode catalyst layer	299
10.6	MEA performance	303
10.7	Conclusions	309
10.8	References	310
11	Developments in membranes, catalysts and membrane electrode assemblies for direct methanol fuel cells (DMFCs) A. MANTHIRAM, X. ZHAO and W. LI, University of Texas at Austin, USA	312
11.1	Introduction	312
11.2	Historical development and technical challenges	316
11.3	Methanol oxidation reaction catalysts	319
11.4	Oxygen reduction reaction (ORR) catalysts	324
11.5	Proton exchange membranes	331
11.6	Membrane electrode assembly (MEA) fabrication and structure	343

11.7	Conclusions and future trends	353
11.8	Acknowledgements	358
11.9	References	358
12	Electrolytes and ion conductors for solid oxide fuel cells (SOFCs)	370
	N. PREUX, A. ROLLE and R.N. VANNIER, Ecole Nationale Supérieure de Chimie de Lille, France	
12.1	Introduction	370
12.2	Oxide ion conduction	371
12.3	Electrolyte materials for solid oxide fuel cells (SOFCs)	374
12.4	Preparation and characterization of electrolyte materials for SOFCs	385
12.5	Conclusions	393
12.6	References	394
13	Novel cathodes for solid oxide fuel cells	402
	J.-C. GRENIER, J.-M. BASSAT and F. MAUVY, ICMCB-CNRS, Université de Bordeaux, France	
13.1	Introduction	402
13.2	The oxygen reduction reaction in solid oxide fuel cells (SOFCs) and implications for cathode materials	404
13.3	Conventional cathode materials: perovskite-type oxides	409
13.4	Innovative cathode materials: structural aspects of 2D non-stoichiometric perovskite-related oxides	412
13.5	Comparative transport properties and electrochemical performances of 2D non-stoichiometric oxides	422
13.6	$\text{Ln}_2\text{NiO}_{4+\delta}$ oxides: innovative and flexible materials for oxygen electrodes of protonic ceramic fuel cells (PCFCs) and electrolyzers	429
13.7	Prospective conclusions	436
13.8	References	437
14	Novel anode materials for solid oxide fuel cells	445
	S. W. TAO, P. I. COWIN and R. LAN, University of Strathclyde, UK	
14.1	Introduction	445
14.2	Requirements for solid oxide fuel cell anode materials	446
14.3	Cermet solid oxide fuel cell anode materials	451
14.4	Perovskite-structured solid oxide fuel cell anode materials	454

x	Contents	
14.5	Other oxide anode materials	463
14.6	Non-oxide anode materials	465
14.7	Poisoning of solid oxide fuel cell anode materials	466
14.8	Conclusions and future trends	468
14.9	References	469
15	Thin-film solid oxide fuel cell (SOFC) materials	478
	A. J. JACOBSON, C. YU and W. GONG, University of Houston, USA	
15.1	Introduction	478
15.2	Electrolytes	480
15.3	Anode materials	486
15.4	Cathode materials	488
15.5	Device structures	497
15.6	Conclusions	501
15.7	Acknowledgments	503
15.8	References	503
15.9	Appendix: glossary	513
16	Proton conductors for solid oxide fuel cells (SOFCs)	515
	E. TRAVERSA and E. FABBRI, formerly National Institute for Materials Science (NIMS), Japan	
16.1	The proton conduction mechanism in high temperature proton conductor (HTPC) electrolytes	515
16.2	Reaction processes at the electrode/electrolyte when using HTPC electrolytes	520
16.3	HTPC: the state of the art and challenges	522
16.4	Electrodes for HTPC electrolytes: the state of the art and challenges	526
16.5	Solid oxide fuel cells (SOFCs) based on HTPC electrolytes: current status and future perspectives	530
16.6	Conclusions	531
16.7	References	532
Part IV	Functional materials for demand reduction and energy storage	
17	Materials and techniques for energy harvesting	541
	M. E. KIZIROGLOU and E. M. YEATMAN, Imperial College London, UK	

17.1	Introduction	541
17.2	Theory of motion energy harvesting	542
17.3	Piezoelectric harvesting	546
17.4	Electrostatic harvesting	551
17.5	Thermoelectric harvesting	555
17.6	Electromagnetic energy harvesting from motion	560
17.7	Suspension materials for motion energy harvesting	563
17.8	References	566
18	Lithium batteries: current technologies and future trends	573
	B. SCROSATI and J. HASSOUN, Sapienza University of Rome, Italy	
18.1	Introduction	573
18.2	Lithium-ion batteries	579
18.3	Safety of lithium-ion batteries	581
18.4	Energy density of lithium-ion batteries	583
18.5	Future trends	589
18.6	Acknowledgements	596
18.7	References	596
19	Rare-earth magnets: properties, processing and applications	600
	I. R. HARRIS, University of Birmingham, UK and G. W. JEWELL, University of Sheffield, UK	
19.1	Introduction	600
19.2	Properties of permanent magnetic materials	601
19.3	Improving the properties of permanent magnetic materials	608
19.4	Processing of permanent magnets	615
19.5	Properties of commercially manufactured permanent magnets	627
19.6	Applications of permanent magnet materials	633
19.7	References	638
Part V Appendix		
	Appendix: Atomic-scale computer simulation of functional materials: methodologies and applications	643
	A. CHRONEOS, Imperial College London, UK and University of Cambridge, UK and C. L. BISHOP, D. C. PARFITT and R. W. GRIMES, Imperial College London, UK	
A.1	Introduction	643

xii	Contents	
A.2	Methodological approaches	643
A.3	Application of methodologies	652
A.4	Future trends	658
A.5	References	658
	<i>Index</i>	663
