Sintering

Mechanisms of Convection
Nanodensification and Field
Assisted Processes

Contents

Overview of Conventional Sintering	1
1 Introduction	1
2 Global Driving Forces	2
3 Local Driving Forces	6
4 Sintering, Coalescence and Grain Growth.	7
5 Pore Stability	12
6 Sintering Mechanisms: Kinetic Control	13
7 An Unfinished Story	15
8 Summary	16
References	16
Modelling “Nano-Effects” in Sintering	17
1 Introduction	17
2 Densification Law	20
3 Nonlinear Relation Between Stress and Strain Rate	21
4 A Molecular Dynamics Study of Sintering	23
5 Coarsening Law	25
6 Pre-Sintering Agglomeration.	27
7 Closing of Large Pores.	30
8 Concluding Remarks	32
References	34
Nano-Scaled Grain Growth	35
1 Introduction	36
2 Classical Equation for Grain Growth	37
3 GB Segregation and Grain Growth	38
4 Kinetics of Grain Growth for Nanomaterials.	38
4.1 GB Segregation and Solute Drag.	38
4.2 Drag Forces Arising From GB Segregation.	39

5	Thermodynamics of Grain Growth for Nanomaterials	41
5.1	GB Segregation and Reduced GB Energy.	41
5.2	Models of GB Energy Reduced by Solute Segregation.	43
6	Thermo-Kinetic Analysis for Grain Growth	47
6.1	Reduced GB Energy and GB Mobility upon Grain Growth	47
6.2	Thermo-Kinetic Treatment	48
6.3	Thermodynamic and Kinetic Nano-scale Analysis	52
7	Summary	54
	References	54
	Effect of Powder Characteristics on Nanosintering	57
