of Bio-/Neuro-Informatics

Nikola Kasabov (Ed.)

With 490 Figures and 92 Tables

 Springer

Contents

List of Abbreviations	XLVII
------------------------------------	-------

1 Understanding Nature Through the Symbiosis of Information Science, Bioinformatics, and Neuroinformatics

<i>Nikola Kasabov</i>	1
1.1 Nature as the Ultimate Inspiration and Target for Science	1
1.2 Information Science (IS).....	3
1.3 Bioinformatics	7
1.4 Neuroinformatics	9
1.5 About the Handbook	11
1.6 Conclusion	12
References	12

Part A Understanding Information Processes in Biological Systems

2 Information Processing at the Cellular Level: Beyond the Dogma

<i>Alberto Riva</i>	17
2.1 Fundamentals.....	18
2.2 The Cell Factory	21
2.3 Intracellular and Extracellular Signaling	25
2.4 Conclusions.....	27
Further Reading	27

3 Dielectrophoresis: Integrated Approaches for Understanding the Cell

<i>Takeshi Yamakawa, Hiroko Imasato</i>	29
3.1 Complex Permittivity as Bioinformation.....	30
3.2 Dielectrophoresis (DEP)	30
3.3 Separation of Blood Cells	34
3.4 Estimation of the DEP Force	37
3.5 Conclusions.....	41
References	41

4 Information Processing at the Genomics Level

<i>Alvin T. Kho, Hongye Liu</i>	43
4.1 Characterizing a Biological System State, the Central Dogma of Molecular Biology, and the Advent of Bioinformatics	44
4.2 High-Throughput Gene Expression Measurement Principles and Technologies	45

4.3	Typical Workflow in Generic Transcriptomic Data Analysis	46
4.4	Data Representation and Visualization	46
4.5	Noise and Normalization	49
4.6	Identifying Coherent Mathematical Patterns: Technical/Statistical False Positives.....	51
4.7	General Strategies to Minimize Biological False Positives	52
4.8	Generalizations and Conclusion	53
	References	54
5	Understanding Information Processes at the Proteomics Level	
	<i>Shaojun Dai, Sixue Chen</i>	57
5.1	Genetic Information Transfer from DNA to Protein by Transcription and Translation.....	57
5.2	Protein Information Processing by Translational and Posttranslational Control.....	61
5.3	High-Throughput Platforms for Protein Separation and Characterization	62
5.4	Quantitative Proteomics and Posttranslational Proteomics	66
5.5	Summary and Future Perspectives.....	70
	References	71
6	Pattern Formation and Animal Morphogenesis	
	<i>Michael G. Paulin</i>	73
6.1	Historical Overview.....	74
6.2	Models.....	76
6.3	Where Patterns Come From	80
6.4	Evolution and Development of Morphology	84
6.5	Genes and Development.....	88
6.6	Discussion and Future	90
	References	91
7	Understanding Evolving Bacterial Colonies	
	<i>Leonie Z. Pipe</i>	93
7.1	Lessons Learned from Experiment	94
7.2	Which Modeling Approach Should I Use?.....	98
7.3	Modeling Morphology Transitions in Bacterial Colonies	99
7.4	Dynamics of Bacterial Diffusion.....	101
7.5	Modeling Ring Formations in Colonies of <i>Proteus mirabilis</i> and <i>B. subtilis</i>	103
7.6	Modeling Arrays and Aggregates	104
7.7	Limitations of Bacterial Colony Growth Models.....	106
7.8	Recent Trends and Future Directions	107
	References	110

Part B Molecular Biology, Genome and Proteome Informatics

8 Exploring the Interactions and Structural Organization of Genomes	
<i>Grant H. Jacobs</i>	115
8.1 The Structure of Chromosomes, Genomes, and Nuclei	115
8.2 Testing for Interacting Chromatin Using Chromosome Conformation Capture	118
8.3 Processing Chromosome Conformation Capture Sequence Data	122
8.4 Calculating Genomic Loci Proximity or Interaction Data	123
8.5 Interpreting the Data	125
8.6 Future Prospects	126
References	127
9 Detecting MicroRNA Signatures Using Gene Expression Analysis	
<i>Stijn van Dongen, Anton J. Enright</i>	129
9.1 Background	130
9.2 Enrichment Analysis	132
9.3 Existing Enrichment Methodologies	136
9.4 Sylamer: A Tool for miRNA Seed Enrichment Analysis	138
9.5 Using Sylamer and Related Tools	141
9.6 Use of Sylamer on Real Biological Examples	144
9.7 Conclusions	148
References	148
10 Bioinformatic Methods to Discover <i>Cis</i>-regulatory Elements in mRNAs	
<i>Stewart G. Stevens, Chris M. Brown</i>	151
10.1 The Importance of <i>Cis</i> -regulatory Elements in mRNAs	151
10.2 Searching for <i>Cis</i> -regulatory Elements Using Bioinformatics	153
10.3 Obtaining High-Quality mRNA Sequence Data to Analyze	156
10.4 Known Regulatory Elements	157
10.5 De Novo Element Discovery	159
10.6 Combinatorial Methods	164
10.7 Conclusions and Future Prospects	165
References	165
11 Protein Modeling and Structural Prediction	
<i>Sebastian Kelm, Yoonjoo Choi, Charlotte M. Deane</i>	171
11.1 Proteins	171
11.2 Protein Structure	172
11.3 Protein Sequence	174
11.4 Computational Protein Structure Prediction	175
References	180

Part C Machine Learning Methods for the Analysis, Modeling and Knowledge Discovery from Bioinformatics Data

12 Machine Learning Methodology in Bioinformatics	
<i>Colin Campbell</i>	185
12.1 Supervised Learning	186
12.2 Unsupervised Learning	195
12.3 Conclusions.....	203
References	204
13 Case-Based Reasoning for Biomedical Informatics and Medicine	
<i>Periklis Andritsos, Igor Jurisica, Janice I. Glasgow</i>	207
13.1 Case-Based Reasoning	208
13.2 Feature Selection for CBR	210
13.3 Case-Based Reasoning Systems	211
13.4 Case-Based Reasoning in Biomedicine	214
13.5 Conclusions.....	218
References	219
14 Analysis of Multiple DNA Microarray Datasets	
<i>Veselka Boeva, Elena Tsiporkova, Elena Kostadinova</i>	223
14.1 Rationale	223
14.2 Data and Methods.....	224
14.3 Results and Discussion.....	229
14.4 Conclusions.....	233
References	233
15 Fuzzy Logic and Rule-Based Methods in Bioinformatics	
<i>Lipo Wang, Feng Chu, Wei Xie</i>	235
15.1 Overview.....	236
15.2 Fuzzy Neural Network: Structure and Training.....	236
15.3 Ranking Importance of Genes for Feature Selection	238
15.4 Demonstration with Benchmarking Data	238
15.5 Additional Fuzzy and Rule-Based Approaches.....	240
15.6 Fuzzy and Rule-Based Approaches to Clustering and Prediction in Microarray Data	241
15.7 Summary and Discussion	242
References	243
16 Phylogenetic Cladograms: Tools for Analyzing Biomedical Data	
<i>Mones S. Abu-Asab, Jim DeLeo</i>	247
16.1 On Intelligence.....	248
16.2 Computational Intelligence and Cladograms	250
16.3 Computational Intelligence: A Conciliatory View.....	250
16.4 Heterogeneity Within Biological Data	251
16.5 Statistical Methods and Heterogeneity	254
16.6 The Phenetic Versus the Phylogenetic Approaches to Analysis	254

16.7	Phylogenetics: Biologically Compatible Computational Intelligence Tools	255
16.8	Analyzing, Modeling, and Mining Biological Data	257
16.9	Applications of Parsimony to Various Biomedical Issues	259
16.10	Implications of Applying Parsimony Phylogenetics	260
16.11	Closing Thoughts	261
	References	262
17	Protein Folding Recognition	
	<i>Lavneet Singh, Girija Chetty</i>	265
17.1	Protein Folding Recognition Problem	266
17.2	Protein Database and Its Features	268
17.3	Feature Selection and Classification	269
17.4	Illustrative Experiments	271
17.5	Exemplar Results	271
17.6	Conclusions and Future Work	272
	References	272
18	Kernel Methods and Applications in Bioinformatics	
	<i>Yan Fu</i>	275
18.1	Kernel Functions	276
18.2	Support Vector Machines	278
18.3	Applications of Kernel Methods to Bioinformatics	280
18.4	Conclusions	283
	References	283
 Part D Modeling Regulatory Networks: The Systems Biology Approach		
19	Path Finding in Biological Networks	
	<i>Lore Cloots, Dries De Maeyer, Kathleen Marchal</i>	289
19.1	Background	289
19.2	Inferring Interaction Networks from Omics Data	290
19.3	Using Interaction Networks to Interpret Functional Data	294
19.4	Conclusion	304
	References	304
20	Inferring Transcription Networks from Data	
	<i>Alexandru Floares, Irina Luludachi</i>	311
20.1	Introduction and Background	311
20.2	The Dynamics and Regulomics of Transcription Networks	312
20.3	The GP RODES Algorithm	315
20.4	Results	319
20.5	Conclusion	325
	References	326

21 Computational Methods for Analysis of Transcriptional Regulation	
<i>Yue Fan, Mark Kon, Charles DeLisi</i>	327
21.1 Background	327
21.2 Binding Motif Discovery Algorithms	329
21.3 Binding Site Identification	337
21.4 Target Gene Identification and Construction of the Gene Regulatory Network (GRN)	340
21.5 Machine Learning Approaches	344
21.6 Conclusions	349
References	349
22 Inferring Genetic Networks with a Recurrent Neural Network Model Using Differential Evolution	
<i>Nasimul Noman, Leon Palafox, Hitoshi Iba</i>	355
22.1 Background and History	355
22.2 Modeling Approaches to Gene Regulatory Networks	356
22.3 Recurrent Neural Network Model for GRN	357
22.4 Relevant Research on GRN Reconstruction Using RNN	359
22.5 A Modified DE Algorithm for Inferring GRN with RNN	359
22.6 Reconstruction Experiments	363
22.7 Conclusion	370
References	371
23 Structural Pattern Discovery in Protein–Protein Interaction Networks	
<i>Tamás Nepusz, Alberto Paccanaro</i>	375
23.1 Detecting Protein Complexes from Protein–Protein Interaction Networks	376
23.2 Random Graph Models for Protein–Protein Interaction Networks	386
23.3 Conclusions	395
References	395
24 Molecular Networks – Representation and Analysis	
<i>Miguel A. Hernández-Prieto, Ravi K.R. Kalathur, Matthias E. Futschik</i>	399
24.1 Overview	399
24.2 Transcriptional Regulatory Networks in Prokaryotes	401
24.3 Protein Interaction Networks in Humans	406
24.4 Current Challenges and Future Directions	412
References	413
25 Whole–Exome Sequencing Data – Identifying Somatic Mutations	
<i>Roberta Spinelli, Rocco Piazza, Alessandra Pirola, Simona Valletta, Roberta Rostagno, Angela Mogavero, Manuela Marega, Hima Raman, Carlo Gambacorti–Passerini</i>	419
25.1 Materials and Methods	420
25.2 Results	424
25.3 Summary and Future Prospects	425
References	426

Part E Bioinformatics Databases and Ontologies

26 Biological Databases

<i>Mario Cannataro, Pietro H. Guzzi, Giuseppe Tradigo, Pierangelo Veltri</i>	431
26.1 Sequence Databases	432
26.2 Structure Databases	433
26.3 Interactomics Databases	435
26.4 Proteomics Databases	437
26.5 Conclusions	438
References	439

27 Ontologies for Bioinformatics

<i>Andrea Splendiani, Michele Donato, Sorin Drăghici</i>	441
27.1 Defining Ontology	441
27.2 Brief History of the Use of Ontologies in Bioinformatics	444
27.3 Languages and Systems to Represent Ontologies	445
27.4 Overview of Ontologies in Bioinformatics	448
27.5 Use of Ontologies in Bioinformatics	454
27.6 Beyond Ontologies	460
References	461

Part F Bioinformatics in Medicine, Health and Ecology

28 Statistical Signal Processing for Cancer Stem Cell Formation

<i>Mónica F. Bugallo, Petar M. Djurić</i>	465
28.1 The Biological Problem	466
28.2 The Model	467
28.3 The Forward Problem	468
28.4 The Inverse Problem	471
28.5 Conclusions	474
References	474

29 Epigenetics

<i>Micaela Montanari, Marcella Macaluso, Antonio Giordano</i>	477
29.1 DNA Methylation	478
29.2 DNA Methylation and Cancer	480
29.3 Histone Modifications	482
29.4 Epigenetics and Cancer Therapy	484
29.5 Conclusions	485
References	485

30 Dynamics of Autoimmune Diseases

<i>Hyeygjeon Chang, Alessandro Astolfi</i>	491
30.1 Overview of Systemic Lupus Erythematosus	492
30.2 Disease Model with Control Input	493

30.3	Control Procedure and Computer Simulations	496
30.4	Conclusions.....	498
	References	499
31	Nutrigenomics	
	<i>Hylde Zirpoli, Mariella Caputo, Mario F. Tecce</i>	501
31.1	Overview.....	501
31.2	Effects of Bioactive Nutrients on Gene Expression	503
31.3	Effect of Bioactive Nutrients on Metabolite Profiling.....	506
31.4	Bioactive Effect of Nutrients on Protein Expression.....	508
31.5	Systems Biology and Bioinformatics Tools	510
31.6	Conclusions and Future Perspectives	511
	References	511
32	Bioinformatics and Nanotechnologies: Nanomedicine	
	<i>Federico Ambrogi, Danila Coradini, Niccolò Bassani, Patrizia Boracchi, Elia M. Biganzoli</i>	517
32.1	Background	517
32.2	Biostatistics Supporting Bioinformatics for Biomarker Discovery.....	519
32.3	Nanotechnology in Human Healthcare	525
32.4	Discussion.....	528
	References	529
33	Personalized Information Modeling for Personalized Medicine	
	<i>Yingjie Hu, Nikola Kasabov, Wen Liang</i>	533
33.1	Medical Data Analysis	533
33.2	Global, Local, and Personalized Modeling Approaches	536
33.3	A Methodology to Build a Personalized Modeling System.....	541
33.4	An Integrated Optimization Method for Implementing a PMS.....	542
33.5	Experiment.....	546
33.6	Conclusion and Future Development of Personalized Modeling Systems.....	550
	References	552
34	Health Informatics	
	<i>David Parry</i>	555
34.1	Healthcare	555
34.2	Clinical Uses of Information	558
34.3	Computational Intelligence in Health Informatics	562
34.4	Conclusion	562
	References	562
35	Ecological Informatics for the Prediction and Management of Invasive Species	
	<i>Susan P. Worner, Muriel Gevrey, Takayoshi Ikeda, Gwenaël Leday, Joel Pitt, Stefan Schliebs, Snjezana Soltic</i>	565
35.1	The Invasive Species Problem.....	565
35.2	Predicting and Prioritizing Species – Self-Organizing Maps (SOMS) ...	566

35.3	Species Distribution Models	569
35.4	Individual-Based Models.....	576
35.5	Conclusions.....	580
	References	581

Part G Understanding Information Processes in the Brain and the Nervous System

36 Information Processing in Synapses

	<i>Hiroshi Kojima</i>	587
36.1	General View of Synaptic Transmission	588
36.2	Structure of the Synapse	589
36.3	Physiology of Synaptic Transmission (Presynaptic Site)	594
36.4	Physiology of Synaptic Transmission (Postsynaptic Site)	603
36.5	Integration of Synaptic Transmission	610
36.A	Summary of the Techniques Used for Investigation of Synaptic Functions	618
	References	620

37 Computational Modeling with Spiking Neural Networks

	<i>Stefan Schliebs, Nikola Kasabov</i>	625
37.1	Neurons and Brain	625
37.2	Models of Spiking Neurons.....	627
37.3	Neural Encoding.....	635
37.4	Learning in SNN.....	636
37.5	Applications of SNN	639
37.6	Evolving Spiking Neural Network Architecture	639
	References	643

38 Statistical Methods for fMRI Activation and Effective Connectivity Studies

	<i>Xingfeng Li, Damien Coyle, Liam Maguire, T. Martin McGinnity</i>	647
38.1	Functional Magnetic Resonance Imaging.....	648
38.2	GLM for Activation Detection	649
38.3	General Linear Mixed Model for Activation Detection (Second-Level Data Analysis)	654
38.4	Effective Connectivity	657
38.5	Conclusions and Future Directions.....	668
	References	669

39 Neural Circuit Models and Neuropathological Oscillations

	<i>Damien Coyle, Basabdatta S. Bhattacharya, Xin Zou, KongFatt Wong-Lin, Kamal Abuhassan, Liam Maguire</i>	673
39.1	Modeling Neural Circuits at Multiple Scales	674
39.2	Alzheimer's Disease and Abnormal Brain Oscillations	677
39.3	A Biophysical Model to Study Hippocampal Theta Rhythms in AD	678

39.4	Neural Population Models to Study Cortical Rhythms in AD	682
39.5	A Neural Mass Model to Study Thalamocortical Alpha Rhythms in AD	687
39.6	Discussion and Conclusion	694
39.A	Appendix	694
	References	697
40	Understanding the Brain via fMRI Classification	
	<i>Lavneet Singh, Girija Chetty</i>	703
40.1	Magnetic Resonance Imaging (MRI)	703
40.2	Background	704
40.3	Materials and Methods	705
40.4	Feature Selection	706
40.5	Classification Using Various Classifiers	707
40.6	Experimental Results	708
40.7	Conclusions and Further Work	709
	References	710
Part H Advanced Signal Processing Methods for Brain Signal Analysis and Modeling		
41	Nonlinear Adaptive Filtering in Kernel Spaces	
	<i>Badong Chen, Lin Li, Weifeng Liu, José C. Príncipe</i>	715
41.1	Overview	715
41.2	Kernel Least Mean Squares	718
41.3	Application Examples	726
41.4	Conclusion	732
	References	733
42	Recurrence Plots and the Analysis of Multiple Spike Trains	
	<i>Yoshito Hirata, Eric J. Lang, Kazuyuki Aihara</i>	735
42.1	Overview	735
42.2	Recurrence Plots	736
42.3	Univariate Analysis Using Recurrence Plots	737
42.4	Multivariate Analysis Using Recurrence Plots	739
42.5	Distances Between Spike Trains	740
42.6	Examples	741
42.7	Discussion	743
42.8	Conclusions	743
	References	744
43	Adaptive Multiscale Time–Frequency Analysis	
	<i>Naveed ur Rehman, David Looney, Cheolsoo Park, Danilo P. Mandic</i>	745
43.1	Data Driven Time Frequency Analysis	745
43.2	Empirical Mode Decomposition	746
43.3	Multivariate Extensions of EMD	748

43.4	Addressing the Problem of Nonuniqueness Through the Mode-Alignment Property of MEMD.....	754
43.5	Filter Bank Property of MEMD and Noise-Assisted MEMD.....	756
43.6	Applications.....	758
43.7	Discussion and Conclusions.....	760
	References	761

Part I Information Modeling of Perception, Sensation and Cognition

44 Modeling Vision with the Neocognitron

	<i>Kunihiko Fukushima</i>	765
44.1	Overview.....	765
44.2	Outline of the Network.....	766
44.3	Principles of Robust Recognition.....	768
44.4	S-cells.....	770
44.5	C-Cells.....	776
44.6	The Highest Stage.....	777
44.7	Networks Extended from the Neocognitron.....	779
	References	781

45 Information Processing in the Gustatory System

	<i>Alexandra E. D'Agostino, Patricia M. Di Lorenzo</i>	783
45.1	Neural Coding of Sensory Information – General Concepts.....	783
45.2	The Peripheral Gustatory System.....	785
45.3	Taste Processing in the Brainstem.....	786
	References	793

46 EEG Signal Processing for Brain-Computer Interfaces

	<i>Petia Georgieva, Filipe Silva, Mariofanna Milanova, Nikola Kasabov</i>	797
46.1	Overview.....	797
46.2	BCI Technologies.....	798
46.3	EEG-Based BCI.....	799
46.4	BCI Mobile Robot Control – IEETA Case Study.....	802
46.5	Source-Based BCI.....	805
46.6	Conclusions.....	811
	References	811

47 Brain-like Information Processing for Spatio-Temporal Pattern Recognition

	<i>Nikola Kasabov</i>	813
47.1	Spatio and Spectro-Temporal Data Modeling and Pattern Recognition.....	813
47.2	Single Spiking Neuron Models.....	816
47.3	Learning and Memory in a Spiking Neuron.....	818
47.4	STPR in a Single Neuron.....	820

47.5	Evolving Spiking Neural Networks	822
47.6	Computational Neurogenetic Models (CNGM)	825
47.7	SNN Software and Hardware Implementations to Support STPR	827
47.8	Current and Future Applications of eSNN and CNGM for STPR	828

<i>Mika Hirvensalo</i>	1071
59.1 Overview	1071
59.2 Biomolecular and Quantum Parallelism	1072
59.3 Quantum Computing Preliminaries	1074
59.4 Quantum Algorithms	1078
59.5 Biological Applications of Quantum Computing	1080
References	1081

60 Brain, Gene, and Quantum Inspired Computational Intelligence	
<i>Nikola Kasabov</i>	1083
60.1 Levels of Information Processing in the Brain	1084
60.2 CI and ANN Models Inspired by Neuronal and Cognitive Processes in the Brain	1085
60.3 Gene Inspired Methods of Computational Intelligence	1088
60.4 Computational Neurogenetic Models	1090
60.5 Quantum Inspired CI.....	1093
60.6 Towards the Integration of Brain, Gene, and Quantum Information Processing Principles: A Conceptual Framework for Future Research.....	1094
60.7 Conclusions and Directions for Further Research	1096
References	1096
61 The Brain and Creativity	
<i>Francesco C. Morabito, Giuseppe Morabito, Matteo Cacciola, Gianluigi Occhiuto</i>	1099
61.1 Creativity and Perception of Art.....	1099
61.2 Picture Complexity Metrics	1100
61.3 Artistic Complexity and the Brain	1101
61.4 Quantitative Measure of Complexity	1102
61.5 Artistic Complexity of Paintings	1103
61.6 Saliency Maps of Paintings.....	1107
61.7 Concluding Remarks	1108
References	1108
62 The Allen Brain Atlas	
<i>Michael Hawrylycz, Lydia Ng, David Feng, Susan Sunkin, Aaron Szafer, Chinh Dang</i>	1111
62.1 The Portal	1111
62.2 Mouse Atlas Resources	1112
62.3 Human and Non-Human Primate Atlas Resources	1120
62.4 Beyond the Atlases.....	1124
62.5 Conclusions.....	1125
References	1125
Glossary	1127
Acknowledgements	1139
About the Authors	1143
Detailed Contents	1171
Subject Index	1201
