PEAT STRATIGRAPHY AND CLIMATE CHANGE

Guest Editors

Dr. Peter G. Langdon
Senior Lecturer in Physical Geography,
Geography and Environment, University of Southampton,
University Road, Room Number 44/2077,
Highfield, Southampton SO17 1BJ
Email address: P.G.Langdon@soton.ac.uk

Dr. Paul D. Hughes
University of Southampton, University Road,
Room Number 44/2033, Highfield,
Southampton SO17 1BJ
Email address: paul.hughes@soton.ac.uk

Dr. Anthony Brown
University of Southampton, University Road,
Room Number 44/2025, Highfield,
Southampton SO17 1BJ
Email address: Tony.Brown@soton.ac.uk

PEAT STRATIGRAPHY AND CLIMATE CHANGE

Peat stratigraphy and climate change
P. Langdon, P. Hughes and T. Brown

Vegetation patterns under climate changes in the Eemian and Early Weichselian in Central Europe inferred from a palynological sequence from Ustków (central Poland)
P. Kołaczek, M. Karpinska-Kołaczek and J. Petera-Zganiacz

Development and refinement of proxy-climate indicators from peats

Reconstructing peatland water tables using transfer functions for plant macrofossils and testate amoebae: A methodological comparison
M. Väisänen, A. Blundell, D.J. Charman, E. Karofeld, A. Korhola, Ü. Sillasoo and E.-S. Tuittila

A millennial record of environmental change in peat deposits from the Miten bog (East Belgium)

Examining the uncertainties in a ‘tuned and stacked’ peatland water table reconstruction
G.T. Swindles, M. Blaauw, A. Blundell and T.E. Turner

Subantarctic peatlands and their potential as palaeoenvironmental and palaeoclimatic archives
N. Van der Putten, D. Mauquoy, C. Verbruggen and S. Björck

The relationship of fine-resolution, multi-proxy palaeoclimate records to meteorological data at Fågelmossen, Värmland, Sweden and the implications for the debate on climate drivers of the peat-based record
M.J. Amesbury, K.E. Barber and P.D.M. Hughes

A 1000-year reconstruction of summer precipitation from Ireland: Calibration of a peat-based palaeoclimatic record
D.J. Charman, V. Höhl, A. Blundell, F. Mitchell, J. Newberry and P. Oksanen

Volcanic impacts on peatland microbial communities: A tephropalaeoecological hypothesis-test
R.J. Payne

Multi-proxy Holocene palaeoclimatic records from Walton Moss, northern England and Dosenmoor, northern Germany, assessed using three statistical approaches
T.J. Daley and K.E. Barber

Testate amoebae as indicators of hydroseral change: An 8500 year record from Mer Bleue Bog, eastern Ontario, Canada
S.M. Elliott, H.M. Roe and R.T. Patterson

Regional climate change from peat stratigraphy for the mid- to late Holocene in central Ireland

The use of k-values to examine plant ‘species signals’ in a peat humification record from Newfoundland
