CONTENTS

Preface	v
Acknowledgments	ix
1. The Science of Energy and Global Warming	1
2. Energy Market Structures and Regulatory Structures	7
3. The Future	13
4. The Economics of Global Energy Security	27
1 Potential Dangers to the Economies of Nations of the World Stemming from Energy Supply Disruptions	27
2 External Energy Supply Disruptions: Dangers over the Long Term	29
3 Natural Gas Raises New Security Challenges	32
4 The Evolving Role of the Middle East	33
5 Possible Impacts of a Major Energy Crunch	35
6 The Role of Markets	35
7 Conclusion: Toward the Formulation of a Constructive Collective Energy Security Policy	36
5. Energy Myths and a Brief History of Energy	39
6. The Economics of Energy and Climate Change	49
1 Introduction	49
2 The Stern Review	51
3 Energy Economics	52
4 How Economic Tools Can Mitigate Climate Change	55
5 Limits on Emissions, A Carbon Tax and a Cap-and-Trade System	57
6 Conclusion	60

7. Where Do We Go from Here?	63
8. The Future of Energy Based on Technological Innovation	83
a Why We Need a New Manhattan Project to Address Energy Use and Climate Change	83
b Other Policy Initiatives	86
Summary	89
