

# Landscape Evolution in the United States

An Introduction to the Geography,  
Geology, and Natural History

Preface	ix	Exhumation	45
		Volcanism	47
<b>Part I</b>		<b>5. Forcing Variable: The Tectonic System</b>	<b>49</b>
<b>Keys to Understanding Landscape Evolution</b>		Fire and Ice	49
		The Tectonic System	49
<b>1. The Tortoise and the Hare</b>	<b>3</b>	The Atlantic Passive Continental Margin	51
How Slow Is Slow?	3	The Pacific Active Continental Margin	53
Maps, Cross-Sections, and Scale	4	Tectonic Accretion, Underplating, and Suture Zones	54
The Face of the United States	5	Thermal Plumes and Hot Spots	55
Across the Great Divide	7	Tekton: The Carpenter, The Builder	58
Components, Mechanisms, and Variables That Impart Change on a Landscape	12	<b>6. Forcing Variable: The Climatic System</b>	<b>59</b>
<b>2. Component: The Rock/Sediment Type</b>	<b>15</b>	Present-Day Climate Zones	59
Weathering, Erosion, and Deposition	15	Controls on Climate	60
Rocks and Unconsolidated Sediment	16	A Daughter of the Snows: The Continental Glaciation	63
The Influence of Bedrock on a Landscape	19	Alpine Glaciation	71
Karst Landscape	21	<b>7. Forcing Variables: Sea Level and Isostasy</b>	<b>77</b>
Distribution of Rock/Sediment Type Among the US Physiographic Provinces	21	Sea-Level Changes	77
<b>3. Component: The Structural Form</b>	<b>29</b>	River Response to Sea-Level Changes	79
Style of Rock Deformation (Structure)	29	Isostasy and Isostatic Equilibrium	80
Influence of Geologic Structure on Landscape	31	Tectonic Versus Isostatic Uplift/Subsidence	84
The Response of Dipping Layers to Erosional Lowering	33	<b>8. Interaction of Tectonics, Climate, and Time</b>	<b>87</b>
The Shape of Land vs. the Shape of Rock Structure	38	Structure-Controlled versus Erosion-Controlled Landscapes	87
<b>4. Mechanisms That Impart Change to Landscapes</b>	<b>41</b>	Thresholds and Reincarnation	90
Uplift and Subsidence	41	A Classification of Structural Provinces	92
Erosion and Deposition	42	A Structural Overview of the Four Physiographic Regions	92

## Part II Structural Provinces

<b>9. Unconsolidated Sediment</b>	<b>99</b>	<b>13. Crystalline Deformation Belts</b>	<b>197</b>
The Nebraska Sand Hills Region and the Ogallala Aquifer	99	The Crystalline Appalachians	198
The Atlantic and Gulf Coast Shoreline	101	Erosional History of the Appalachian Mountains	204
Ancient Shorelines of the Coastal Plain	108	The Fall Line	205
The Pacific Coast	112	The Blue Ridge Escarpment	206
<b>10. Nearly Flat-Lying Sedimentary Layers</b>	<b>117</b>	The Northern Rocky Mountains and North Cascades	207
Overview of the Interior Plains and Plateaus Region and the Coastal Plain	118	The Superior Upland Crystalline Province	214
Overview of the Great Plains and Wyoming Basin	119	<b>14. Young Volcanic Rocks of the Cordillera</b>	<b>219</b>
Bench-and-Slope Landscape	127	Magma Types and Lava Domes	220
The Colorado Plateau	128	The Columbia River Plateau	221
The Interior Low Plateaus	133	The Snake River Plain	227
Erosional Mountains of the Appalachian Plateau	138	Cordilleran Volcanic Areas Between 60 and 20 Million Years Old	229
Ozark Plateau	145	Cordilleran Volcanic Areas Younger Than 20 Million Years	233
Fractures in Nearly Flat-Lying Layers on the Colorado Plateau	148	<b>15. Normal Fault-Dominated Landscapes</b>	<b>239</b>
The Coastal Plain	153	The Basin and Range	239
<b>11. Crystalline-Cored Mid-Continent Anticlines and Domes</b>	<b>161</b>	Rio Grande Rift	255
The Adirondack Mountains	161	The Teton Range	255
The St. Francois Mountains	163	The Wasatch Mountains	258
The Wichita, Arbuckle, and Llano Structural Domes	165	Triassic Lowlands of the Appalachian Mountains	260
The Northwestern Great Plains	168	<b>16. Cascadia Volcanic Arc System</b>	<b>265</b>
Crystalline-Cored Dome Mountains on the Colorado Plateau and the Colorado Mineral Belt	168	The Coast Range and Valleys	268
The Middle and Southern Rocky Mountains	169	The Olympic Mountains	270
The Wind River and Bighorn Mountain Ranges	177	The Klamath Mountains	274
The Black Hills	177	The Cascade Mountains	275
Water Gaps in the Rocky Mountains	179	The Central-Southern Cascade Mountains	276
<b>12. Foreland Fold-and-Thrust Belts</b>	<b>181</b>	<b>17. California Transpressional System</b>	<b>281</b>
The Cordilleran (Sevier) Fold-and-Thrust Belt	181	The San Andreas Fault System	283
The Appalachian Fold-and-Thrust Belt	188	Displacement Along the San Andreas Fault	287
The Ouachita and Marathon Fold-and-Thrust Belts	191	The History of the San Andreas Fault System	287
Water Gaps in the Valley and Ridge and Ouachita Mountains	194	A Relict Subduction Zone Landscape	288
		The Formation of Transpressional Structures	290
		The Transverse Ranges and the Salton Sea	291
		Rotation of the Transverse Block	293
		The Eastern California–Walker Lane Belt	295
		The Coast Ranges	296
		Peninsular Ranges	299
		The Sierra Nevada	300

<b>18. The Story of the Grand Canyon</b>	<b>307</b>	<b>22. Formation, Collapse, and Erosional Decay of Mountain Systems</b>	<b>365</b>
The Physiographic Canyon	307	Subduction and Development of the Tectonic Wedge	365
Why Less than Six Million Years?	308	Gravitational Collapse of a Mountain	369
Meanders	309	Lithospheric Delamination	371
The Great Deformation and Paleoelevation	310	Erosional Decay of Mountain Systems	372
Recent Incision Rates	311	<b>23. The Appalachian Orogenic Belt: An Example of Compressional Mountain Building</b>	<b>375</b>
Exhumation Ages	312	Setting the Stage	375
A Pre-Six-Million-Year Theory on the Cutting of the Canyon	313	A Tectonic Map of the Appalachians	377
Water Gaps	317	Major Tectonic Boundaries	384
		Tectonic Framework	386
		Formation of Laurentia	386
		Flysch and Molasse Basins: Dating Appalachian Orogeny	387
		The Foreland Fold-and-Thrust Belt	390
		The Five Appalachian Realms	392
		Late Cambrian-Early Ordovician Paleogeography	394
		Laurentian Continental Realm	394
		Internal Massifs	395
		Iapetus Oceanic Realm	395
		Peri-Gondwana Microcontinental Realm	400
		Sequence of Appalachian Collision	403
		<b>24. The Cordilleran Orogenic Belt</b>	<b>409</b>
		The Precambrian Shield	411
		Precambrian Sedimentary/Volcanic Succession	411
		The Miogeocline	411
		The $Sr_i = 0.706$ Line	412
		Cratonic Deformation: Laramide and Maria Thick-Skinned Belts	413
		Miogeoclinal Deformation: The Sevier Thrust Belt	414
		Accreted Terrane Thrust Belts: The Antler and Sonoma Orogenies	415
		Truncation	417
		Volcanic Arc and Subduction Complexes	418
		Building the Cordilleran Tectonic Wedge	419
		Epilogue	420
		Appendix	423
		Bibliography	441
		Index	453
<b>Part III</b>			
<b>Mountain Building</b>			
<b>19. Early Theories on the Origin of Mountain Belts</b>	<b>321</b>		
<b>20. Keys to the Interpretation of Geological History</b>	<b>327</b>		
Geologic Field Mapping	327		
How Rocks Reveal History	328		
Fossils, Cross-Cutting Relationships, and the Geologic Time Scale	330		
Metamorphism	334		
Plutonism	337		
Volcanic Arc Complexes	338		
Ophiolite, Subduction Complexes, and Collision	339		
Recognition of Crystalline Basement	340		
Radiometric Dating (Geochronology)	341		
Pre-, Syn-, Post-, and Intra-	342		
Detrital Zircon Geochronology	342		
Fault and Belt Terminology	343		
<b>21. Tectonic Style, Rock Successions, and Tectonic Provinces</b>	<b>345</b>		
A Tectonic Subdivision of the United States	346		
Tectonic Style	347		
Rock Successions	349		
Tectonic Provinces	352		
The Idealized Orogenic Belt	359		
Termination of Deformation at the Margins of an Orogenic System	360		
Intra-Orogenic Deposition, Plutons, and Suture Zones	361		
Post-Orogenic Reincarnation	362
