Contents

<i>Preface to the first edition (1995)</i>	<i>page</i> ix
<i>Preface to the second edition (2013)</i>	xii
1 Preliminary statistics	1
1.1 Random variables	1
1.2 Random numbers	1
1.3 Probability	3
1.4 Probability distribution, distribution function, and density function	4
1.5 Joint and marginal probability distributions	8
1.6 Mathematical expectation, moments, variances, and covariances	9
1.7 Conditional probability and Bayes' rule	11
1.8 Monte Carlo integration	13
1.9 Importance sampling	14
1.10 Stochastic processes	15
1.11 Markov chains	17
1.12 Homogeneous, inhomogeneous, irreducible, and aperiodic Markov chains	20
1.13 The limiting probability	21
2 Direct, linear, and iterative-linear inverse methods	23
2.1 Direct inversion methods	24
2.2 Model-based inversion methods	29
2.3 Linear/linearized inverse methods	32
2.4 Solution of linear inverse problems	35
2.5 Iterative methods for non-linear problems: local optimization	53
2.6 Solution using probabilistic formulation	67
2.7 Summary	69

3	Monte Carlo methods	72
3.1	Enumerative or grid-search techniques	72
3.2	Monte Carlo inversion	74
3.3	Hybrid Monte Carlo–linear inversion	79
3.4	Directed Monte Carlo methods	80
4	Simulated annealing methods	81
4.1	Metropolis algorithm	85
4.2	Heat bath algorithm	91
4.3	Simulated annealing without rejected moves	100
4.4	Fast simulated annealing (FSA)	101
4.5	Very fast simulated reannealing	102
4.6	Mean field annealing	106
4.7	Using SA in geophysical inversion	116
4.8	Summary	117
5	Genetic algorithms	119
5.1	A classical GA	119
5.2	Schemata and the fundamental theorem of genetic algorithms	128
5.3	Problems	131
5.4	Combining elements of SA into a new GA	132
5.5	A mathematical model of a GA	134
5.6	Multimodal fitness functions, genetic drift, GA with sharing, and repeat (parallel) GA	142
5.7	Uncertainty estimates	144
5.8	Evolutionary programming – a variant of GA	145
5.9	Summary	146
6	Other stochastic optimization methods	148
6.1	The neighborhood algorithm (NA)	148
6.2	Particle swarm optimization (PSO)	153
6.3	Simultaneous perturbation stochastic approximation (SPSA)	154
7	Geophysical applications of simulated annealing and genetic algorithms	157
7.1	1D seismic waveform inversion	159
7.2	Prestack migration velocity estimation	184
7.3	Inversion of resistivity sounding data for 1D earth models	204
7.4	Inversion of resistivity profiling data for 2D earth models	208
7.5	Inversion of magnetotelluric sounding data for 1D earth models	211
7.6	Stochastic reservoir modeling	217

7.7 Seismic deconvolution by mean field annealing (MFA) and Hopfield network	221
7.8 Joint inversion	229
8 Uncertainty estimation	241
8.1 Methods of numerical integration	243
8.2 Simulated annealing: the Gibbs sampler	246
8.3 Genetic algorithm: the parallel Gibbs sampler	249
8.4 Numerical examples	250
8.5 Hybrid Monte Carlo	262
8.6 Summary	265
<i>Bibliography</i>	268
<i>Index</i>	279
