<i>Woodhead Publishing Series in Energy</i>	<i>xiii</i>
<i>Preface</i>	<i>xvii</i>
<b>Part I Introduction, supply chains and feedstock</b>	<b>1</b>
1 Biomass combustion for power generation: an introduction	3
J. P. WOLF, DONG Energy Power, Denmark	
1.1 Introduction	3
1.2 Biomass combustion techniques	3
1.3 Biomass as fuel	5
1.4 Market development for biomass combustion and conversion technologies	8
1.5 Reference	8
2 Biomass supply chains	9
A. A. RENTIZELAS, National Technical University of Athens, Greece	
2.1 Introduction	9
2.2 Types of biomass and waste streams	10
2.3 Biomass supply chain structure and characteristics	12
2.4 Development of advanced biomass supply and process chains	23
2.5 Integration of biomass combustion into waste management	25
2.6 Advantages and limitations of using biomass for energy conversion	27
2.7 Future trends	30
2.8 Sources of further information and advice	32
2.9 References	32

vi	Contents	
3	Biomass feedstocks: categorisation and preparation for combustion and gasification	36
	L. S. NIKOLAISEN and P. D. JENSEN, Danish Technological Institute, Denmark	
3.1	Introduction	36
3.2	Types of feedstock	37
3.3	Characterisation, analysis and categorisation techniques	42
3.4	Fuel preparation and upgrading for combustion or conversion	47
3.5	Advantages and limitations of particular fuels	53
3.6	Future trends	54
3.7	References	55
<b>Part II</b>	<b>Biomass combustion and co-firing</b>	<b>59</b>
4	Direct combustion of biomass	61
	M. MANDØ, Aalborg University, Denmark	
4.1	Introduction	61
4.2	Basis of biomass combustion	64
4.3	Fouling prevention and control	71
4.4	Corrosion and additives	74
4.5	Technology-specific issues	76
4.6	Conclusion	80
4.7	References	80
5	Biomass co-firing	84
	C. YIN, Aalborg University, Denmark	
5.1	Introduction	84
5.2	Direct co-firing technologies	85
5.3	Indirect and parallel co-firing technologies	102
5.4	Conclusion	102
5.5	References	103
6	Biomass gasification	106
	Y. NEUBAUER, Berlin Institute of Technology, Germany and H. LIU, University of Nottingham, UK	
6.1	Introduction	106
6.2	Basic principles and feedstocks	106
6.3	Basic reactor types	113
6.4	Monitoring and control, and performance optimization	117
6.5	Advantages and limitations	119
6.6	Future trends	121
6.7	Sources of further information and advice	123
6.8	References	125

7	Fast pyrolysis of biomass for the production of liquids A. BRIDGWATER, Aston University, UK	130
7.1	Introduction	130
7.2	Pyrolysis principles and products	130
7.3	Applications of bio-oil	136
7.4	Feedstocks	142
7.5	Fast-pyrolysis technology	147
7.6	Fast-pyrolysis bio-oil upgrading	154
7.7	Economics	161
7.8	Conclusion and future trends	162
7.9	Sources of further information and advice	163
7.10	References	168
8	Intermediate pyrolysis of biomass A. HORNUNG, Aston University, UK	172
8.1	Introduction	172
8.2	Intermediate pyrolysis technologies	174
8.3	Applications of intermediate pyrolysis and comparison with fast pyrolysis	177
8.4	An integrated project including intermediate pyrolysis	181
8.5	Future trends	183
8.6	References	184
<b>Part III</b>	<b>Large-scale biomass combustion and biorefineries</b>	<b>187</b>
9	Large-scale biomass combustion plants: an overview S. CAILLAT, École des Mines de Douai, France and E. VAKKILAINEN, Lappeenranta University of Technology, Finland	189
9.1	Introduction	189
9.2	Technologies	189
9.3	Fuels	198
9.4	Operational issues	205
9.5	Environmental aspects	211
9.6	Future trends	220
9.7	Sources of further information and advice	221
9.8	Acknowledgements	221
9.9	References	221
10	Industrial-scale biomass combustion plants: engineering issues and operation H. WIDELL, Aalborg Energie Teknik (AET), Denmark	225
10.1	Introduction	225
10.2	The suitability of industrial-scale plants for biomass combustion	227

viii	Contents	
10.3	Biomass combustion technologies	229
10.4	Biomass combustion plant engineering issues	240
10.5	Operational routes to optimise performance and tackle problems	269
10.6	Future trends	273
10.7	Sources of further information and advice	274
10.8	Acknowledgements	274
10.9	References	275
11	Biorefineries: increased value from biomass conversion L. LANGE, Aalborg University, Denmark	278
11.1	Introduction	278
11.2	Biorefinery feedstocks and concepts	280
11.3	Improving feedstocks	284
11.4	Conversion by enzymes and microorganisms	287
11.5	Life-cycle analysis and sustainability	290
11.6	Future trends	292
11.7	Sources of further information and advice	294
11.8	References	294
