

Organiser

VIVTA Verein zur Förderung des Instituts für Verfahrenstechnik
der RWTH Aachen e.V.

Registration and Payment

Programm and Conference Organisation

Lehrstuhl für Chemische Verfahrenstechnik - RWTH Aachen University
Johannes Völler-Blumenroth
Marco Scholz
Fee Pitsch
Susanne Offermann
Turmstraße 46,
D 52056 Aachen, Germany

Conference Venue and Date

Eurogress Aachen
Monheimsallee 52, 52062 Aachen, Germany
7th/8th November 2012

The proceedings of 14th Aachener Membran Kolloquium contain the articles to all oral presentations and posters. The authors are responsible for content and layout of the articles.

Bibliographical Information German National Library (Deutsche Nationalbibliothek)

The German National Library lists this publication in its database "Deutsche Nationalbibliografie". Detailed bibliographical information is accessible through the website of the German National Library <http://dnb.ddb.de>

Contents

1	Keynote I	3
1.1	Water Electrolysis - History and state-of-the-art for commercial units, Detlef Stolten (Forschungszentrum Jülich GmbH)	4
2	Gas and Vapor Separation I	13
2.1	Membrane development for hydrogen separation at Shell, Arian Nijmeijer (Shell)	14
2.2	Energy modeling results of a water producing power plant, Ludwin Daal (Kema Netherlands)	15
2.3	Biogas upgrading with highly selective SEPURAN [®] Membranes, Jörg Balster (Evonik Fibres GmbH)	36
3	Water Treatment I	41
3.1	Treatment of wastewaterstreams from oil and natural gas production with combined membrane processes, Stephan Schütze (Desalogics Membrane Supplies GmbH)	42
3.2	Combining ozonation and ceramic membrane filtration for tertiary treatment, Johan Stüber (Berlin Centre of Competence for Water)	47
3.3	Gas permeable PDMS membranes for bubbleless aeration in wastew- ater treatment, Eoin Casey (University College Dublin)	60
4	Biotechnology	69
4.1	Membrane supported virus separation from biological solutions, Peter Czermak (University of Applied Sci. Mittelhessen)	70
4.2	Fine-tuning membrane characteristics and optimization of filtration parameters for algae harvesting, Chris Dotremont (VITO)	82

4.3	Enhancing inhibited fermentations through a dynamic electro-membrane bioreactor, Gunnar Jonsson (Technical University of Denmark)	94
5	Energy Applications	97
5.1	Strategies to improve the power output of Blue Energy, Kitty Nijmeijer (University of Twente)	98
5.2	Energy recovery in membrane capacitive deionization, Piotr Dlugolecki (Voltea B.V.)	101
5.3	Energy, Equipment, and Cost Savings by Use of Membranes in Amine-Based Absorption-Desorption Processes for CO ₂ Removal, Steffen Stünkel (Technische Universität Berlin)	102
6	Water Treatment II	117
6.1	A novel polymeric capillary membrane family for direct water filtra- tion, Jens Potreck (Pentair X-Flow, Research and Development)	118
6.2	Start-up and 1st years of operation: Pearl Gas-To-Liquid a complex under Zero-Liquid-Discharge, Guillo Schrader (Qatar Shell GTL Ltd.)	125
6.3	Development and application of polymeric hollow fiber membranes and filter modules for water filtration, Steffen Schütz (MANN+HUMMEL GMBH)	126
7	Gas and Vapor Separation II	141
7.1	Theoretical and experimental investigations of flat sheet membrane module types for high capacity gas separation applications, Torsten Brinkmann (Helmholtz-Zentrum Geesthacht)	142
7.2	Biogas conditioning using hollow fiber membrane contactors, Steffen Vogler (Ingenieurbüro Buse GmbH)	161
7.3	The potential of the HybSi ceramic membrane in process intensifi- cation, Frans Velterop (Pervatech BV)	170
8	Keynote II	175
8.1	Materials science and process technology combine into new mem- brane products and applications, Hans Wijmans (Membrane Technology and Research, Inc.)	176
8.2	Membrane distillation: basic considerations and pilot applications, J. Koschikowski (Fraunhofer Institute for Solar Energy Systems (ISE)) .	178
9	Materials	193

9.1	Novel functionalized polyethylene membranes for high efficiency filtration applications, Magda Avramescu (Lydall Solutech)	194
9.2	Performance results from a field installation with Lewabrane® RO elements, Alan Sharpe (Lanxess)	198
9.3	Investigation of gas-liquid porometry for the characterization of microfiltration membranes, Uwe Beuscher (WL Gore and Associates Inc.)	205
10	Process Engineering	215
10.1	Application of Nanofiltration in Processing of Brines, Gerrald Bargeman (AkzoNobel Chemicals B.V.)	216
10.2	Colloidal interaction-model for membrane fouling during micro- and ultrafiltrations of whey and whey proteins, Tim Steinhauer (TU München)	217
10.3	Pilot tests in organophilic pervaporation: membrane, module and simulation - an overall concept, Heike Matuschewski (PolyAn GmbH)	219
11	Water Treatment III	235
11.1	Treatment of Cooling Tower Blowdown Water with Membranes in a Zero Liquid Discharge (ZLD) Power Plant, Ramraj Venkatadri (Pall Corporation)	236
11.2	Lake Water Treatment by Ceramic Membrane Filtration, Peter Hartmann (WABAG Water Technology Ltd.)	247
11.3	BASF and Water, Hartwig Voss (BASF SE)	252
12	Membrane Applications	257
12.1	Membranes in Biotechnology: New Highlights, Dieter Melzner (Sartorius Stedim Biotech GmbH)	258
12.2	Emission-reduction and water cycle closure in the greenhouse horticulture industry a practical waste water treatment study, R.M. Jurgens (TNO)	262
12.3	Troubleshooting performance issues of reverse osmosis systems, Peter Sehn (Dow Water and Process Solutions)	283
13	Closing Lecture	297
13.1	Microsieves for in situ product recovery: Submerged filtration vs. reverse-flow diafiltration, Frederike Carstensen (RWTH Aachen)	298

14	Poster - Water Treatment	305
14.1	Low-fouling hydrogel-coated ultrafiltration membranes for water treatment processes, Mathias Quilitzsch (Universität Duisburg-Essen)	306
14.2	Impacts of ozonation and coagulation on fouling during subsequent ultrafiltration in advanced wastewater treatment, Manuel Godehardt (Technische Universität Berlin)	310
14.3	A new microfiltration process for continuous removal of solid particles from cold rolling emulsions, Barbara Wendler (VDEh-Betriebsforschungsinstitut)	316
14.4	Prediction of fouling potential of treated domestic wastewater by on-line submicron particle analysis, Martin Schulz (Kompetenzzentrum Wasser Berlin gGmbH)	328
14.5	Direct nanofiltration of wastewater treatment plant effluent for organic micropollutant removal, Jochen Herr (RWTH Aachen)	336
14.6	Layer-by-layer interface modification to enhance bipolar membrane performance, Said Abdu (RWTH Aachen)	344
14.7	Capacitive deionization for water desalination: applicability for various streams and benchmarking with electrodialysis, Celine Huyskens (VITO)	350
14.8	Application tests of membrane contactors for oxygenation in aquaculture, Anja Gerbeth (University of Applied Sciences Zwickau)	352
14.9	Fenton coupled with nanofiltration for elimination of BPA, Ivonne Escalona (Universitat Rovira I Virgili)	359
14.10	Photocatalytic membrane for water purification, Kristina Fischer (Institute of Surface Modification)	368
14.11	Influence of the module geometry on the filtration behavior of ceramic membranes in the treatment of waste waters contaminated with oily emulsions, S.Kerker (University of Applied Sciences Giessen)	372
14.12	Continuous monitoring of oil for cross-flow ceramic microfiltration of emulsified oily wastewater, M. Ebrahimi (University of Applied Sciences Giessen)	377
14.13	The effect of complexing agent through the exchange membranes, Abdellah Ammi Said (USTHB)	383
14.14	Stimuli-responsive ultrafiltration membranes for improved cleaning efficiency, Marc Birkner (Universität Duisburg-Essen)	391

14.15	Pall Microfiltration system improves cooling tower blowdown water quality, protects reverse osmosis membranes and lowers operating costs, Ramraj Venkatadri (Pall Corporation)	404
14.16	Direct pre-treatment of Llobregat river water through submerged hollow fibre, Carmen Galvan (CETaqua)	409
14.17	Metal recovery from rinsing water of the tinplate production, Ralf Wolters (VDEh-Betriebsforschungsinstitut GmbH)	418
15	Poster - Gas and Vapor Separation	427
15.1	Simulation and Comparison two different methods for membrane separation of hydrogen from hydrogen/methane/ethylene mixture, Hajar Taheri Afarani (Esfahan university of technology)	428
15.2	Membrane hybrid processes for argon purification, Tobias Lülff (RWTH Aachen)	433
15.3	Field tests of carbon dioxide removal from flue gasses using polymer membranes, Ludwin Daal (KEMA Netherlands)	437
15.4	Membrane contactor for natural gas sweetening: Development of a suitable nanocomposite material, May-Britt Hägg (NTNU)	438
15.5	Development of nanocomposite membranes for CO ₂ capture, May-Britt Hägg (NTNU)	440
15.6	Membrane vapor separation for recovery of butanol from ABE fermentation products by using new organophilic membranes based on poly-4-methyl-2-pentyne, Vladimir Teplyakov (TIPS RAS)	442
15.7	Development and optimization of thin film composite silica-filled poly(1-trimethylsilyl-1-propyne) membranes and their application in alcohol/water separations, P. Vandezande (VITO)	451
15.8	Asymmetric LSCF-based oxygen transport membranes, M. J. Wolf (Forschungszentrum Jülich GmbH,)	463
15.9	Gas separation membrane preparation and characterization using polyimide hollow fiber, Byung Seong Lee (Airrane.Co.Ltd)	467
16	Poster - Process Engineering	471

16.1	Optimum integrated reverse osmosis cascades with polyamide and cellulose acetate membranes for chemicals ultrapurification, Ricardo Abejon (Universidad de Cantabria)	472
16.2	Solvent based membrane nanofiltration for process intensification, Anita Buekenhoudt (VITO)	476
16.3	A comparative approach on glycerin by-product valorization including membrane processes, Nicolae Sdrula (S.C.IPROCHIM S.A.)	477
16.4	Pre-desulfurization of jet fuel by pervaporation for application in fuel cell systems, Yong Wang (Forschungszentrum Jülich GmbH)	487
17	Poster - Solvent Recovery	499
17.1	Nanofiltration separation of aqueous polyethyleneglycol-salt mixtures, Alele Nkem (Universität Duisburg-Essen)	500
18	Poster - Biotechnology	511
18.1	Mechanistic and semi-empirical approaches for modeling inhomogeneous flow in membrane chromatography capsules, Pranay Ghosh (IBG,Forschungszentrum Juelich)	512
18.2	High Binding Ion Exchange Membranes as Initial Capture Step for Monoclonal Antibody Purification, Katharina J. Hassel (University of Waterloo)	525
18.3	Immobilization of beta-galactosidase on membranes for process intensification, Peter Jochems (University of Antwerp)	530
18.4	On the production of alginate beads via hollow-fiber membrane emulsification, Hans Breisig (RWTH Aachen)	533
18.5	In situ product removal in biotechnology: biobutanol recovery as example, Wouter Van Hecke (VITO)	539
18.6	Towards the optimisation of operating conditions in anaerobic membrane bioreactors, Aurelie Grelot (Veolia Environment)	540
18.7	Development and characterization of low-cost, gas porous electrodes based on different carbon compositions and binder types for use in bioelectrochemical systems, Deepak Pant (VITO)	542

18.8	Investigation of the ion transport during the continuous production of itaconic acid using electro-dialysis with bipolar membranes (EDBM), Jan Stodollick (RWTH Aachen)	544
18.9	Reverse-flow diafiltration for in situ product recovery of antibodies, Frederike Carstensen (RWTH Aachen)	550
18.10	Membrane Separations in Enzymatic Hydrolysis of Cellulose, Christian Abels (RWTH Aachen)	556
19	Poster - Materials	561
19.1	A novel electron beam-based method for the immobilization of trypsin on polymer membranes, Agnes Schulze (Leibniz-Institute of Surface Modification)	562
19.2	Layer-by-layer assembly of polyelectrolyte multilayers on polyether-sulfone hollow fibres: dry-wet spinning, physicochemical characterizations and performance assessment, Lars Peters (RWTH Aachen)	566
19.3	Carbon nanotube mixed matrix membranes for gas separation, Kerstin Lorenz (RWTH Aachen)	572
19.4	A remarkable current-voltage curve without polarization plateau and a new approach, Kamel-Eddine Bouhidel (University of Batna)	581
19.5	Development of MEAs for the cogeneration of electricity and hydroxylamine, Yolanda Alvarez-Gallego (VITO)	587
19.6	Innovation in the field of ceramic membranes - Numerical methodology to correlate surface area with mechanical resistance and performances , Ph. Lescoche (TAMI Industries)	590
20	Poster - Health	595
20.1	The Design of New Antiparkinsonians, Rok Borstnar (National Institute of Chemistry Slovenia)	596
A	Annex	603
A.1	Index of Exhibitors	603
A.2	Index of Authors	607
