1 Introduction **1**

1.1 Excavations and their classification 1
1.2 Surface excavations 2
1.3 Underground excavations 2
1.4 Importance of minerals and brief history of their recovery 3
1.5 Current status of mineral industry 6
1.6 Excavation technologies/systems – development & growth 6
1.7 Unique features of mineral industry 14
1.7.1 Different phases of mine life 16
1.8 Brief history of civil work excavations including tunneling 16
1.9 The current scenario 18
1.9.1 Population growth 18
1.9.2 Lifestyle 19
1.9.3 Globalization 19
1.9.4 Buyer's market 19
1.9.5 Technological developments and renovations 20
1.9.6 Information technology (IT) and its impacts 20
1.10 Tomorrow's mine & civil excavations 20
1.11 The way forward 22
Questions 22
References 23

2 Rocks, minerals and mineral inventory evaluation **25**

2.1 Formation process and classification 25
2.1.1 Igneous rocks 27
2.1.2 Sedimentary rocks 27
2.1.3 Metamorphic rocks 28
2.2 Rock cycle & type of deposits 29
2.3 Texture, grain size and shape 29
2.3.1 Grain sizes and shapes 31
2.3.2 Durability, plasticity and swelling potential of rocks 31

2.4 The concepts of mineral resources and reserves; mineral inventory, cutoff grade and ores 32
2.4.1 Some important ores – chemical & mineralogical composition 32
2.5 Geological structures 32
2.5.1 Geometry of a deposit 32
2.5.2 Forms of deposits 34
2.5.3 Structural features of rock mass 34
2.6 Physical and mechanical characteristics of ores and rocks 37
2.6.1 Rocks as rock mechanics 37
2.6.2 Rock composition 38
2.6.3 Rock strength 40
2.7 Some other properties/characteristics 41
2.7.1 Hardness of minerals 41
2.7.2 Rock breakability 42
2.8 Related terms – rock and mineral deposits 43
2.9 Mineral inventory evaluation 45
2.9.1 Introduction 45
2.9.2 Grade computation from borehole data 46
2.9.3 Mineral inventory modelling/estimation techniques 46
2.9.3.1 Method of polygons 47
2.9.3.2 Triangle or triangular prism method 48
2.9.3.3 Cross-sectional method 49
2.9.3.4 Inverse Square Distance Weighting (IDW) method 50
2.9.3.5 Classical statistics 50
2.9.3.6 Geostatistics 50
2.9.3.7 Non-linear estimation techniques in geostatistics 51
2.9.4 Important considerations for evaluation of the mineral inventory 53
2.9.4.1 Homogeneity and mode of origin 53
2.9.4.2 Geological and mineralogical boundaries 53
2.9.5 Computation of the mineral inventory 55
2.9.5.1 Logical steps followed 55
2.9.5.2 Graphical presentation of data 55
2.9.5.3 Statistical analysis and cumulative probability distribution 56
2.9.5.4 Structural analysis – the semi-variogram 56
2.9.5.5 Trend surface analysis 57
2.9.5.6 Checking the variogram model 57
2.9.5.7 Block kriging 57
2.9.5.8 Block dimensions 57
2.9.5.9 Kriging procedure 58
2.9.6 Graphical presentation of the kriged results 58
2.9.7 Grade-tonnage calculation and plotting the curves 60
2.9.8 Selection of a suitable mining/stoping method 61
2.10 Resources classification by UNECE 62
2.11 The way forward 66
Questions 66
References 69

3 Prospecting, exploration & site investigations **71**

3.1 Introduction 71
3.2 Prospecting and exploration 71
3.2.1 Finding signs of the mineral in the locality or general indications 71
3.2.1.1 Geological studies 72
3.2.1.2 Geo-chemical studies 72
3.2.2 Finding the deposit or preliminary proving 73
3.2.2.1 Geophysical methods/studies/surveys 73
3.2.2.2 Putting exploratory headings 77
3.2.3 Exploring the deposits or detailed proving – prospecting drilling 78
3.3 Phases of prospecting and exploration program 81
3.4 Site investigations for civil constructions, or any excavation project including tunnels and caverns 82
3.5 Rocks and ground characterization 84
3.5.1 Rock strength classification 84
3.5.2 Rock mass classifications 85
3.6 Rock quality designation (RQD) 85
3.6.1 Q (Rock mass quality) system 87
3.6.2 Geomechanics classification (RMR system) 87
3.6.3 Rock structure rating (RSR) 91
3.7 Geological and geotechnical factors 93
3.8 The way forward 93
Questions 95
References 96

4 Drilling **97**

4.1 Introduction – unit operations 97
4.2 Primary rock breaking 97
4.3 Drilling 98
4.4 Operating components of the drilling system 98
4.5 Mechanics of rock penetration 99
4.5.1 Top-hammer drilling 100
4.5.2 Down-the-hole (DTH) drilling 100
4.5.3 Rotary drilling 101
4.5.4 Augur drill 101
4.5.5 Rotary abrasive drilling 102
4.6 Rock drill classification 102
4.6.1 Tunneling/development drill jumbos 105
4.6.2 Shaft jumbos 105
4.6.3 Ring drilling jumbos 105
4.6.4 Fan drilling jumbos 106
4.6.5 Wagon drill jumbos 106
4.6.6 DTH drill jumbos 106
4.6.7 Roof bolting jumbos 107

4.7 Motive power of rock drills 107
4.7.1 Electric drills 107
4.7.2 Pneumatic drills 107
4.7.3 Hydraulic drills 107
4.8 Drilling accessories 108
4.8.1 Extension drill steels 109
4.8.2 Bits 109
4.8.3 Impact of rock-type on drilling performance 111
4.9 Selection of drill 111
4.10 Summary – rocks drill applications 112
4.11 Drilling postures 114
4.12 The way forward 114
Questions 114
References 116

5 Explosives and blasting 117

5.1 Introduction – explosives 117
5.2 Detonation and deflagration 117
5.3 Common ingredients of explosives 118
5.4 Classification of explosives 118
5.4.1 Primary or initiating explosives 118
5.4.2 Secondary explosives 119
5.4.3 Pyrotechnic explosives 119
5.4.4 Low explosives 119
5.4.5 Commercial explosives – high explosives 120
5.4.5.1 Gelatin explosives 120
5.4.5.1.1 Dynamites (straight dynamite, ammonia dynamite) 120
5.4.5.1.2 Blasting gelatin 121
5.4.5.1.3 Semi gelatin 121
5.4.5.2 Wet blasting agents 121
5.4.5.2.1 Slurry explosives 122
5.4.5.2.2 Emulsions 122
5.4.5.2.3 Heavy ANFO 122
5.4.5.3 Dry blasting agents 122
5.4.5.3.1 Explosive ANFO 122
5.4.5.3.2 ANFO mixing 123
5.4.5.3.3 ANFO loading 123
5.4.5.4 Pneumatic loaders and principles of loading 124
5.4.5.4.1 Pressure type loaders 124
5.4.5.4.2 Ejector type loader 125
5.4.5.4.3 Combine type (combining pressure and ejecting features) 125
5.4.5.5 Safety aspects 125
5.4.5.6 Static hazards associated with ANFO loading 126
5.4.5.7 Special types of explosives 127
5.4.5.7.1 Permitted explosives 127

5.4.5.7.2 Seismic explosives 127
5.4.5.7.3 Overbreak control explosives 127
5.4.6 Military explosives 127
5.5 Blasting properties of explosives 128
5.5.1 Strength 128
5.5.2 Detonation velocity 129
5.5.3 Density 131
5.5.4 Water resistance 131
5.5.5 Fume characteristics, or class, or medical aspects 131
5.5.6 Oxygen balance 131
5.5.7 Completion of reaction 133
5.5.8 Detonation pressure 133
5.5.9 Borehole pressure and critical diameter 133
5.5.10 Sensitivity 133
5.5.11 Safety in handling & storage qualities 134
5.5.12 Explosive cost 134
5.6 Explosive initiating devices/systems 134
5.6.1 Detonator system 135
5.6.1.1 Detonators 135
5.6.1.2 Instantaneous detonators 137
5.6.1.2.1 Plain detonator 137
5.6.1.2.2 Instantaneous electric detonators 137
5.6.1.3 Delay detonators 137
5.6.1.3.1 Electric delay detonators 137
5.6.1.3.2 Electronic delay detonators 138
5.6.1.3.3 Non-electric delay detonators: detonating relays (ms connectors) 138
5.6.1.3.4 Primadet and anodet non-electric delay blasting systems 139
5.6.1.3.5 The nonel system 139
5.6.1.3.6 Combine primadet-nonel system 140
5.6.1.3.7 The hercudet blasting cap system 140
5.6.1.3.8 Advantages of short delay blasting 140
5.6.2 Fuse/cord system 141
5.6.2.1 Safety fuse 141
5.6.2.2 Detonating fuse/cord (DC) 141
5.6.2.3 Igniter cords (IC) 141
5.7 Explosive charging techniques 142
5.7.1 Water gel (slurry loader) 143
5.8 Blasting accessories 143
5.8.1 Exploders 143
5.8.2 Circuit testers 144
5.8.3 Other blasting tools 146
5.9 Firing systems – classification 146
5.9.1 While firing with a safety fuse 146
5.9.2 Firing with electric detonators 146
5.9.3 Non-electric systems 146

5.10 Ground blasting techniques 147
5.10.1 Control/contour blasting 147
5.10.1.1 Pre-splitting 147
5.10.1.2 Cushion blasting 148
5.10.1.3 Smooth blasting & buffer blasting 148
5.10.1.4 Line drilling 149
5.11 Secondary breaking 149
5.11.1 Secondary rock breaking methods 150
5.11.1.1 With the aid of explosives 150
5.11.1.1.1 Plaster shooting 150
5.11.1.1.2 Pop shooting 150
5.11.1.1.3 Releasing jammed muck from the draw points 151
5.11.2 Without aid of explosives 151
5.11.2.1 Mechanical rock breaking 151
5.11.2.1.1 Manual breaking 151
5.11.2.1.2 Mechanical rock breakers 151
5.11.2.1.3 Hydraulic rock breakers 151
5.11.2.1.4 Teledyne rock breaker 152
5.11.2.2 Electrical rock breaking 153
5.11.2.2.1 Rock breaking by the use of high frequency current 153
5.11.2.3 Hydraulic boulder splitter 155
5.12 Use, handling, transportation and storage of explosives 155
5.12.1 Magazine 156
5.13 Explosive selection 157
5.14 Blasting theory 158
5.14.1 Adverse impacts of explosives 158
5.14.1.1 Ground/land vibrations 160
5.14.1.2 Air blast and noise 162
5.14.1.3 Rock throw 162
5.15 Drilling and blasting performance 163
5.15.1 Percentages pull 163
5.15.2 Over-break factor 163
5.15.3 Degree of fragmentation 163
5.15.4 Overall cost 163
5.16 Recent trends in explosives and blasting technology 165
5.17 Concluding remarks 168
Questions 168
References 172

6 Mucking, casting and excavation 175

6.1 Introduction 175
6.2 Muck characteristics 176
6.3 Classification 177
6.4 Underground mucking units 177
6.4.1 Overshot loaders 177

6.4.2 Autoloaders – hopper loaders and LHDs 178
6.4.2.1 Autoloaders – mucking and delivering 178
6.4.2.2 Mucking and transporting – load haul and dump units (LHDs) 181
6.4.2.2.1 Constructional details 181
6.4.2.2.2 Special provisions 181
6.4.2.2.3 Buckets of LHD and other dimensions 181
6.4.2.2.4 LHD tyres 182
6.4.2.2.5 Distance, gradient and speed 182
6.4.2.2.6 Ventilation 182
6.4.2.2.7 Latest developments 183
6.4.2.3 Desirable features 183
6.4.2.3.1 Perfect layout 183
6.4.2.3.2 Suitable drainage and road maintenance 183
6.4.2.3.3 Well-fragmented muck 184
6.4.2.3.4 Maintenance 184
6.4.2.3.5 Trained personnel 184
6.4.2.4 Advantages 184
6.4.2.5 Limitations 185
6.4.2.6 Manufacturers 185
6.5 Arm loaders 186
6.5.1 Gathering-arm-loader (GAL) 186
6.5.2 Arm loaders for sinking operations 186
6.5.3 Riddle mucker 186
6.5.4 Cryderman mucker 186
6.5.5 Cactus-grab muckers 186
6.5.6 Backhoe mucker 187
6.6 Scrapers 187
6.7 Mucking in tunnels 187
6.7.1 Dipper and hydraulic shovels 188
6.7.2 Mucking in TBM driven tunnels 188
6.8 Surface – excavation, loading and casting units 188
6.9 Wheel loaders – front end loaders 189
6.10 Backhoe 190
6.11 Hydraulic excavators 190
6.12 Shovel 191
6.13 Dragline 192
6.13.1 Multi bucket excavators 195
6.14 Bucket chain excavator (BCE) 195
6.15 Bucket wheel excavator (BWE) 195
6.16 Calculations for selection of shovel/excavator 198
6.17 Total cost calculations 200
6.18 Governing factors for the selection of mucking equipment 200
6.19 The way forward 201
Questions 202
References 204

7 Transportation – haulage and hoisting **205**

7.1 Introduction 205
7.2 Haulage system 205
7.2.1 Rail or track mounted – rope haulage 206
7.2.1.1 Rope haulage calculations 208
7.2.1.1.1 Direct rope haulage system 208
7.2.1.1.2 Endless rope haulage system 209
7.2.1.2 Scope and applications of rope haulage 209
7.2.2 Locomotive haulage 209
7.2.2.1 Electric locomotives 210
7.2.2.2 Battery locomotives 211
7.2.2.3 Combination locomotives 211
7.2.2.4 Diesel locomotives 211
7.2.2.5 Compressed air locomotives 212
7.2.2.6 Other fittings 213
7.2.2.7 Locomotive calculations 213
7.3 Trackless or tyred haulage system 214
7.3.1 Automobiles 214
7.3.2 LHD 214
7.3.3 Shuttle car 215
7.3.4 Underground trucks 215
7.3.4.1 Trackless or tyred haulage system 217
7.4 Conveyor system 221
7.4.1 Belt conveyors 221
7.4.1.1 Conveyor calculations 223
7.4.2 Cable belt conveyors 224
7.4.3 Scraper chain conveyors 224
7.5 Hoisting or winding system 225
7.5.1 Head-frame or head-gear 226
7.5.2 Shaft conveyances 226
7.5.3 Rope equipment 226
7.5.4 Classification of hoisting system 228
7.5.4.1 Multi-rope friction winding system 229
7.5.5 Hoisting cycle 231
7.5.6 Calculations of suspended load during hoisting 231
7.5.7 Use of safety devices with a hoisting system 234
7.6 Aerial ropeway 234
7.6.1 Aerial ropeway calculations 235
7.7 Ropes 236
7.7.1 Rope calculations 239
7.8 Track and mine car 240
7.8.1 Track 240
7.8.2 Mine cars 240
7.9 The way forward 241
Questions 242
References 247

8 Supports **249**

8.1 Introduction – necessity of supports 249
8.2 Classification of supports 250
8.3 Self support by in-place (in-situ) rock 250
8.3.1 Support by the use of natural pillars 250
8.3.2 Use of artificial supports 252
8.3.2.1 Brick and stone masonry 252
8.3.2.2 Wooden (timber) supports 252
8.3.2.2.1 Calculations with regard to wooden supports 253
8.3.2.3 Steel supports 256
8.3.2.3.1 Steel props, powered and shield supports 257
8.3.2.3.2 Rock bolting 259
8.3.2.4 Concrete supports 265
8.3.2.5 Support by filling 268
8.4 Selection of support 270
8.4.1 Measures to preserve the stability of the stoped out workings or to minimize problems of ground stability 270
8.5 Effect of ore extraction upon displacement of country rock and surface 271
8.6 The way forward 272
Questions 272
References 274

9 Drives and tunnels (conventional methods) **277**

9.1 Introduction – function of drives and tunnels 277
9.2 Drivage techniques (for drives and tunnels) 277
9.3 Drivage techniques with the aid of explosives 278
9.3.1 Pattern of holes 278
9.3.1.1 Mechanized-cut kerf 279
9.3.1.2 Blasting off the solid 279
9.3.1.2.1 Parallel hole cuts 279
9.3.1.2.2 Verification of pattern of holes 291
9.3.2 Charging and blasting the rounds 292
9.3.2.1 Placement of primer 292
9.3.2.2 Stemming 292
9.3.2.3 Depth of round/hole 292
9.3.2.4 Charge density in cut-holes and rest of the face area 292
9.3.3 Smooth blasting 293
9.3.3.1 Charging and blasting procedure 294
9.3.3.2 Use of ANFO in drives and tunnels 295
9.4 Muck disposal and handling (mucking and transportation) 295
9.5 Ventilation 298
9.5.1 Mine opening ventilation 299
9.5.1.1 Using general air flow 299
9.5.1.2 Using auxiliary fans: forcing, exhaust or contra rotating 299
9.5.2 Ventilation during civil tunneling 301

9.6 Working cycle (including auxiliary operations) 302
9.7 Driving large sized drives/tunnels in tough rocks 303
9.7.1 Full-face driving/tunneling 303
9.7.2 Pilot heading technique 304
9.7.3 Heading and bench method 305
9.8 Conventional tunneling methods: tunneling through the soft ground and soft rocks 305
9.9 Supports for tunnels and mine openings 307
9.9.1 Classification 308
9.9.2 Selection of supports 311
9.10 Driving without aid of explosives 314
9.11 Pre-cursor or prior to driving civil tunnels 315
9.11.1 Site investigations 315
9.11.2 Location of tunnels 315
9.11.3 Rocks and ground characterization 315
9.11.4 Size, shape, length and orientation (route) of tunnels 317
9.11.5 Preparatory work required 317
9.12 Past, present and future of tunneling technology 317
9.13 Over-break and scaling – some innovations 319
9.14 Longer rounds – some trials 319
9.15 The way forward 322
Questions 323

10 Tunneling by roadheaders and impact hammers 327

10.1 Tunneling by boom-mounted roadheaders 327
10.2 Classification boom-mounted roadheaders 330
10.2.1 Ripper (transverse) type roadheaders – (Cutter heads with rotation perpendicular to the boom axis) 330
10.2.1.1 Bar type 331
10.2.1.2 Disc type 331
10.3 Milling or longitudinal (auger) roadheaders 331
10.3.1 Borer type roadheaders 332
10.4 Classification based on weight 333
10.5 Advantages of roadheaders 333
10.6 Important developments 333
10.7 Procedure of driving by the heading machines 335
10.8 Auxiliary operations 336
10.8.1 Ground support 336
10.9 Hydraulic impact hammer tunneling 336
10.10 Excavation procedure and cycle of operations 336
10.10.1 Hammer's working cycle 337
10.11 Merit and limitations 338
10.12 Partial face rotary rock tunneling machines 338
10.13 Excavators 339
10.13.1 Excavators mounted within shield 339
10.13.1.1 Excavator buckets 339

10.14 Excavator with multiple tool miner (MTM) attachments 340
10.14.1 Excavator mounted within a shield 340
10.14.2 Excavator-mounted cutter booms (Partial face machines for NATM) 341
10.15 The way forward 342
Questions 342
References 343

11 Full-face tunnel borers (TBMs) & special methods 345

11.1 Introduction 345
11.1.1 Improved understanding 345
11.2 Tunneling methods and procedures 346
11.3 Full-face tunneling machines 347
11.3.1 Full-face tunnel borers (mechanical) TBM – open and shielded 348
11.3.2 Mechanical excavation of the full cross-section with open type machines 351
11.3.2.1 Open main beam machines 351
11.3.2.2 Single shield 353
11.3.2.3 Double shield 353
11.3.2.4 Enlarging TBM 354
11.4 Mini tunnel borers 358
11.5 Boring system 358
11.6 Rock cutting tools and their types 359
11.6.1 Cutting head configuration 359
11.7 TBM performance 361
11.7.1 Economical aspects 361
11.8 Size of unit and its overall length including its trailing gear 362
11.8.1 Advantages 362
11.8.2 Disadvantages 362
11.9 Backup system/activities 363
11.9.1 Muck disposal 363
11.9.2 Single track 363
11.9.3 Double track 363
11.9.4 Continuous conveyor system 363
11.9.5 Other back-ups include 364
11.10 TBMs for soft ground/formations 365
11.10.1 Full-face shield with picks 365
11.10.2 Compressed air shields 367
11.10.3 Slurry shield 369
11.10.4 Earth pressure balance 369
11.10.4.1 Segments 370
11.10.4.2 Back filling 370
11.10.4.3 Auxiliary construction measures 371
11.10.5 Developments 372
11.11 Phases of tunneling project 375
11.11.1 Tunnel portal 375
11.11.2 Phases of a TBM project 375

11.12 Future technology 375
11.12.1 Hard rock TBMs 376
11.12.2 Soft ground machines 376
11.13 New Austrian tunneling method (NATM) 378
11.13.1 NATM design philosophy and typical features 378
11.13.2 Ground categories and tunneling procedures 379
11.13.2.1 Excavation sequence 379
11.13.3 Semi-mechanized methods 379
11.14 Tunneling through abnormal or difficult ground using special methods 382
11.14.1 Ground treatment 382
11.14.1.1 Reinforcement 382
11.14.1.2 Treatment that tackles the problems arising due to the presence of water 383
11.14.1.3 Lowering water table/ground water 383
11.14.1.4 Use of compressed air to hold back water 383
11.14.1.5 Grouting 385
11.14.1.6 Freezing 386
11.15 Cut and cover method of tunneling 386
11.16 Submerged tubes/tunnels 386

16 Underground mining/stoping methods & mine closure 527

16.1 Introduction 527
16.1.1 Factors governing choice of a mining method 527
16.1.1.1 Shape and size of the deposit 527
16.1.1.2 Thickness of deposit 528
16.1.1.3 Dip of the deposit 529
16.1.1.4 Physical and mechanical characteristics of the ore and the enclosing rocks 529

16.1.1.5 Presence of geological disturbances and influence of the direction of cleats or partings 532
16.1.1.6 Degree of mechanization and output required 532
16.1.1.7 Ore grade and its distribution, and value of the product 534
16.1.1.8 Depth of the deposit 534
16.1.1.9 Presence of water 535
16.1.1.10 Presence of gases 535
16.1.1.11 Ore & country rock susceptibility to caking and oxidation 535
16.1.2 Desirable features of selecting a stoping method 536
16.1.3 Classification – stoping methods 538
16.2 Open stoping methods 540
16.2.1 Open stoping method – room & pillar stoping 540
16.2.1.1 Introduction 540
16.2.1.2 Stope preparation 540
16.2.1.3 Unit operations 541
16.2.1.4 Stoping operations 544
16.2.1.5 Bord and pillar 545
16.2.1.6 Block system 546
16.2.1.7 Stope and pillar 548
16.2.1.7.1 Advantages 549
16.2.1.7.2 Limitations 549
16.2.2 Open stoping method – shrinkage stoping 549
16.2.2.1 Introduction 549
16.2.2.2 Stope preparation 551
16.2.2.3 Unit operations 551
16.2.2.4 Stoping operations 552
16.2.2.5 Layouts 552
16.2.2.5.1 Winning the pillars 552
16.2.2.5.2 Advantages 552
16.2.2.5.3 Limitations 553
16.2.3 Open stoping method – sublevel stoping 553
16.2.3.1 Introduction 553
16.2.3.2 Sublevel stoping with benching 554
16.2.3.3 Blasthole stoping 554
16.2.3.4 Longitudinal sublevel stoping 554
16.2.3.5 Transverse sublevel stoping 556
16.2.3.6 Blasthole drilling 556
16.2.4 Large blasthole stoping 558
16.2.4.1 Stope preparation (general procedure) 558
16.2.4.2 VCR method 562
16.2.4.3 Unit operations 562
16.2.4.4 Layouts 563
16.2.4.4.1 Advantages 564
16.2.4.4.2 Limitations 564
16.2.4.4.3 Winning the pillars 564

16.3 Supported stoping methods 564
16.3.1 Supported stoping method – stull stoping 564
16.3.1.1 Introduction 564
16.3.1.2 Unit operations 566
16.3.1.3 Auxiliary operations 566
16.3.1.4 Stope preparation 566
16.3.1.5 Stoping 566
16.3.1.6 Layouts 566
16.3.1.6.1 Variants 567
16.3.1.6.2 Advantages 567
16.3.1.6.3 Limitations 567
16.3.2 Supported stoping method: cut & fill stoping 567
16.3.2.1 Introduction 567
16.3.2.2 Stope preparation 568
16.3.2.3 Stoping 569
16.3.2.4 Unit operations 569
16.3.2.5 Auxiliary operations 570
16.3.2.5.1 Advantages 570
16.3.2.5.2 Limitations 570
16.3.2.5.3 Variants 570
16.3.2.6 Cut and fill with flat back 571
16.3.2.7 Cut and fill with inclined slicing 572
16.3.2.8 Post and pillar cut and fill stoping 572
16.3.2.9 Stope drive or undercut and fill stoping 574
16.3.2.9.1 Filling methods during deep mining 574
16.3.2.9.2 Top slicing (An undercut-and-fill method) 576
16.3.2.9.3 Filling materials 577
16.3.3 Supported stoping method – square set stoping 582
16.3.3.1 Introduction 582
16.3.3.2 Stope preparation 582
16.3.3.3 Stoping 583
16.3.3.4 Unit operations 583
16.3.3.5 Auxiliary operations 583
16.3.3.6 Layouts 583
16.3.3.6.1 Advantages 584
16.3.3.6.2 Limitations 584

19 Sustainable Development 807

19.1 Sustainable Development (SD) in mining 807
19.1.1 Sustainable development 807
19.1.2 Global issues & backlog on sustainable development 807
19.1.3 Sustainable development in mining 807
19.2 Stakeholders and sustainable development 809
19.2.1 Principles/guidelines for SD by ICMM 809
19.2.2 Status of SD in mining, based on stakeholders' views though a survey by globalscan 811
19.3 Scenarios influencing mining industry 813
19.3.1 Population growth and resulting impacts/implications 813
19.3.2 Use of minerals by world's citizens 813
19.3.3 Mineral consumption trends 815
19.3.4 Status of quality, quantity, type of mineral and *resources* depletion 815
19.3.5 Mineral consumption prediction 817
19.3.6 Mining industry's inherent problems and challenges 818
19.3.7 Global risk ranking and competitiveness in the mining sector 819
19.4 Is mining industry equipped to meet the challenges? 819
19.4.1 Technological developments in mining 819
19.4.2 Initiatives already taken globally to meet demand of minerals mass consumption 821

19.5 Proposed strategy to run mines is an economically viable (beneficial) way 821
19.5.1 Exploration: huge, intensive & speedy together with bringing precision in ore evaluation techniques 822
19.5.2 Establishing mineral inventory, cutoff grade and ore reserves 822
19.5.3 Division of mineral property (i.e. orebody or coal deposits into level and panels) 823
19.5.4 Locale-specific challenges and proposed solutions/way-outs 824
19.5.4.1 Underground metalliferous mining challenges 824
19.5.4.2 Underground coal mining challenges 824
19.5.4.3 Open cast/open pit mines (coal & non coal) challenges 825
19.5.5 Mining difficult deposits using non-conventional technologies 826
19.5.6 Improved fragmentation – a better way to extract minerals (ore, waste rocks, overburden) to save energy 826
19.5.7 Precision in operations – maximizing recovery 827
19.5.8 The critical path to full automation 828
19.5.9 Effective utilization of resources through standardization & benchmarking 833
19.5.10 Needs-based changes, research and development 833
19.6 Measures for SD through improvements environmentally, socially and ethically 834
19.6.1 HSE – a critical business activity for sustainable development 834
19.6.2 Economic development regional as well as local – A case-study 835
19.7 Legal compliances and mining policy 836
19.7.1 Mining laws – legislation 836
19.7.2 Minerals & mining policy 837
19.8 Quality of human resources 838
19.8.1 Academic (educational) status and standard of mining schools 838
19.9 The ultimate aim 839
19.9.1 Contented employees & stakeholders 839
19.9.2 Efficient systems including best practices 840
19.9.3 Legal compliance including Environment Management Systems (EMS) 840
19.9.4 World Class Management (WCM) 840
19.10 The way forward: proposed milestones/strategy 840
