Operation and Diagnostics of Machines and Production Systems Operational States

Special Topic Volume

Edited by
Stanislav Fabian, Tibor Krenicky and Ivan Corny
# Table of Contents

## Preface

**AWJ Cutting: The Technological Head Vibrations with Different Abrasive Mass Flow Rates**  
S. Fabian and S. Salokyova ................................................................. 1

**Abrasive Water Jet Cutting of the Steels Samples Cooled by Liquid Nitrogen**  
R. Uhlář, L.M. Hlaváč, L. Gembalova, P. Jonšta and O. Zuchnický ................. 7

**Experimental Research and Analysis of Selected Technological Parameters on the Roughness of Steel Area Surface HARDOX 500 with Thickness 40mm Cut by AWJ Technology**  
M. Servátka and S. Fabian .................................................................... 13

**Operation of Water Jet System in a Sandstone Quarry and its Impact on Production**  

**Selected Testing for Rapid Prototyping Technology Operation**  
L. Novakova-Marcincinova and J. Novak-Marcincin .................................... 25

**Diagnostics of Product by Vision System**  
K. Židek and E. Rigasová ....................................................................... 33

**Operating Modes of Pneumatic Artificial Muscle Actuator**  
M. Tóthová, J. Pitel and J. Boržíková .................................................... 39

**Vibration of Worm Gear Boxes**  
I. Vojtko, M. Kočiško, A. Šmeringaiová and P. Adamčík .......................... 45

**Experimental Measurement and Examination of Independent and Combined Interaction of Vibrodiagnostic and Tribotechnical Methods**  
S. Fabian and P. Čačko ......................................................................... 51

**Tribotechnical Diagnosis in Aircraft Engine Practice**  
J. Mihálčová ......................................................................................... 57

**The Upgrade Methods of the Pneumatic Actuator Operation Ability**  
M. Balara ............................................................................................. 63

**Evaluation of Capability of Measuring Device on the Basis of Diagnostics**  
L. Straka, I. Čorný and R. Krehel ......................................................... 69

**Abrasive Kind and Granularity Changes Affects to Water Jet Technology Head Vibration during Cutting HARDOX Material Thickness Alternation Process**  
L. Bičejová .......................................................................................... 75

**Water Jet Technology Head Vibration Generation due to Selected Technology Parameters Fluctuation Effect during Alloy Cutting**  
L. Bičejová .......................................................................................... 81

**Implementation of Intelligent Elements in Vibration Diagnostics of CNC Machines**  
J. Murčinko and Z. Murčinková ............................................................ 87

**Microhardness of the Coatings Created by Anodic Oxidation of Aluminum**  
M. Gombár, A. Vagaska, J. Kmec and P. Michal ...................................... 95
The Occurring of the Breakage of Parts Made of Creep-Resisting Chrome Steel and Prevention
J. Fabianova

The Operation Monitoring Condition of the Production Machinery and Facilities Using the Tools of Technical Diagnostics
S. Soltesova and P. Baron

Utilization of Augmented Reality Elements for Visualization of Operational States of Manufacturing Devices

Woodchip Combustion Process Quality and the Amount of Combustion Air
P. Skok, M. Rimár and J. Mižák

Diagnostics of Production Systems Operation Based on Thermal Processes Evaluation
R. Krehel, L. Straka and T. Krenicky

Conformal Cooling of the Injection Moulds
L. Behalek and J. Dobránsky

Durability Analysis for Selected Cutting Tools in Machining Process of Steel 16MoV6-3
J. Dupláč, M. Hatala and P. Michalík

Design of Methodology for Wood Chips Moisture Evaluation
M. Rimár and Š. Kuna

Analysis of the Influence of Chemical Content and Microstructure on the Features of Creep-Resisting Steel as the Basis for the Diagnostics, Prediction and Elimination of Fault States of Manufacturing Systems
J. Fabianova

Monitoring of Operating Conditions of Biomass Combustion Process
J. Boržíková, J. Mižák and J. Pitel

Air Quality Improvement by Reduction of Gas Turbines Emissions
J. Zarnovsky, V. Petková, R. Drlička and J. Dobránsky

Assessment of Statistical Signification of Factors by Machining Inhomogeneous Materials – WPC
J. Zajac, Z. Hutyrová and A. Tarasovičová

Verification of Machine Position in Production Plant with Use of Virtual Reality Technology

Visual Reconstruction and Optimization of Real Workplace on the Base of Spatial Digitisation
J. Novak-Marcincin, J. Barna, J. Torok and M. Janak

Experimental Determination of the Aluminium Thin Sheets Diameter to a Sheet Thickness of 1.5 mm for Two-Cylinder Bending Machine
M. Nováková

Assessment of Material Flow in Foundry Production by Applying Simulation Analysis
P. Semanco and M. Fedak
Proposal for Possibilities of Increasing Production Productivity of Thermosets
Compression Molding with Using Process Simulation Software
T. Duranik, J. Ružbarský and F. Manlig.......................... 191

Keyword Index................................................................. 195
Author Index ................................................................. 197
