1 Introduction  

2 Design-Level Techniques for Stochastic Computing  
2.1 EVAL and BlueShift  
2.2 Dynatune  
2.3 CRISTA  
2.4 Better-Than-Worst-Case Synthesis  
2.5 Recovery-Driven Design  
2.6 Gradual Slack Design  

3 Architecture Frameworks for Stochastic Computing  
3.1 Error-resilient System Architecture (ERSA)  
3.2 Algorithmic Noise Tolerance (ANT)  
3.3 Stochastic Sensor Network on Chip  
3.4 Variation-Adaptive Stochastic Computer Organization (VASCO)  
3.5 Architectural Principles for Stochastic Processors  

4 Compiler Optimizations for Stochastic Computing  
4.1 Critical Path Avoidance  
4.2 Activity Throttling  
4.3 Overlapping Errors
