<b>Part I The basics</b>	1
<b>1 Forward modeling of seismic reflections for rock characterization</b>	3
1.1 Introduction	3
1.2 Quantifying elastic properties of earth by forward modeling: a primer	4
1.3 Quantifying rock properties by forward modeling: a primer	9
1.4 Rock physics transforms: a primer	9
1.5 Synthetic seismic catalogues	10
<b>2 Rock physics models and transforms</b>	13
2.1 Rock physics transforms	13
2.2 Elastic constants	13
2.3 Solid phase	14
2.4 Fluid phase	16
2.5 Fluid substitution	18
2.6 The Raymer–Hunt–Gardner transform	22
2.7 Other <i>S</i> -wave velocity predictors	24
2.8 Contact-cement model	26
2.9 Soft-sand model	28
2.10 Stiff-sand model	29
2.11 Constant-cement model	30
2.12 Inclusion models	31
2.13 Summary of the models	34
2.14 Properties of the pore fluid phases	35
2.15 A note on effective and total porosity and fluid substitution	35
2.16 Example of applying rock physics models to simulate seismic amplitude	41

<b>3</b>	<b>Rock physics diagnostics</b>	<b>43</b>
	3.1 Quantitative diagnostics	43
	3.2 Qualitative diagnostics: staring at the data	47
	3.3 Word of caution when using well data	49
<hr/>		
	<b>Part II Synthetic seismic amplitude</b>	<b>51</b>
<hr/>		
<b>4</b>	<b>Modeling at an interface: quick-look approach</b>	<b>53</b>
	4.1 Reflection modeling at an interface: the concept	53
	4.2 Normal reflectivity and reflectivity at an angle	53
	4.3 Forward modeling using elastic constants	56
	4.4 Forward modeling directly from rock properties	60
<b>5</b>	<b>Pseudo-wells: principles and examples</b>	<b>68</b>
	5.1 Sandwich (three-layer) model	68
	5.2 Geologically consistent inputs	72
	5.3 Depth and compaction	83
<b>6</b>	<b>Pseudo-wells: statistics-based generation</b>	<b>90</b>
	6.1 Introduction	90
	6.2 Monte Carlo simulation	91
	6.3 Monte Carlo simulation with spatial correlation	92
	6.4 Monte Carlo simulation within facies	97
	6.5 Stochastic simulation of related variables	98
	6.6 Examples and sensitivity analysis	100
	6.7 Pseudo-logs of facies	102
	6.8 Spatial simulation of rock properties and reflections	106

	<b>Part III From well data and geology to earth models and reflections</b>	<b>113</b>
<hr/>		
<b>7</b>	<b>Clastic sequences: diagnostics and <math>V_s</math> prediction</b>	<b>115</b>
	7.1 Unconsolidated gas sand	115
	7.2 Consolidated cemented gas sand	125
<b>8</b>	<b>Log shapes at the well scale and seismic reflections in clastic sequences</b>	<b>132</b>
	8.1 Examples of shapes encountered in clastic sequences	132
	8.2 Typical shapes and pseudo-wells in clastic sequences	137
<b>9</b>	<b>Synthetic modeling in carbonates</b>	<b>153</b>
	9.1 Background and models	153

9.2	Laboratory and well data	157
9.3	Pseudo-wells and reflections	159
<b>10</b>	<b>Time lapse (4D) reservoir monitoring</b>	<b>165</b>
10.1	Background	165
10.2	Fluid substitution on velocity–pressure data	169
10.3	Synthetic seismic gathers	172
10.4	Conclusion	175
<hr/>		
<b>Part IV</b>	<b>Frontier exploration</b>	<b>177</b>
<hr/>		
<b>11</b>	<b>Rock-physics-based workflow in oil and gas exploration</b>	<b>179</b>
11.1	Introduction	179
11.2	Rock physics modeling for amplitude calibration	180
11.3	Log and seismic quality control and conditioning	181
11.4	Velocity in exploration seismology	182
11.5	Time-to-depth calibration	183
11.6	Rock typing	185
11.7	Seismic forward modeling	185
11.8	Rock property upscaling	186
11.9	Depth trends, rock physics diagnostics, and model formulation	187
11.10	Using trends at prospect location	194
<b>12</b>	<b>DHI validation and prospect risking</b>	<b>197</b>
12.1	Introduction	197
12.2	Feasibility studies	197
12.3	Recognition of seismic anomalies	198
12.4	DHI validation and prospect risking	199
<hr/>		
<b>Part V</b>	<b>Advanced rock physics: diagenetic trends, self-similarity, permeability, Poisson’s ratio in gas sand, seismic wave attenuation, gas hydrates</b>	<b>205</b>
<hr/>		
<b>13</b>	<b>Rock physics case studies</b>	<b>207</b>
13.1	Universality of diagenetic trends	207
13.2	Self-similarity in rock physics	212
13.3	Elastic properties of rock and its permeability	218
13.4	Stratigraphy-constrained rock physics modeling	220

<b>14</b>	<b>Poisson's ratio and seismic reflections</b>	225
	14.1 The high Poisson's ratio issue in gas sand	225
	14.2 Physics-based explanations	229
	14.3 But how much does it really matter?	237
<b>15</b>	<b>Seismic wave attenuation</b>	239
	15.1 Background and definitions	239
	15.2 Attenuation and modulus (velocity) dispersion	241
	15.3 $Q$ data	243
	15.4 Modulus dispersion and attenuation at partial saturation	244
	15.5 Modulus dispersion and attenuation in wet rock	252
	15.6 Examples	254
	15.7 Effect of attenuation on seismic traces	255
	15.8 Approximate theory of $S$ -wave attenuation	256
<b>16</b>	<b>Gas hydrates</b>	262
	16.1 Background	262
	16.2 Rock physics models for sediment with gas hydrate	264
	16.3 Attenuation in sediment with gas hydrate	269
	16.4 Pseudo-wells and synthetic seismic in gas hydrates	273
