I Introduction to environmental engineering and problem solving 1

André J. Butler

Learning Objectives 1

1.1 History of environmental engineering 1

- 1.1.1 Early civilization (*the rise of humankind to ancient Rome*) 2
- 1.1.2 The Middle Ages (500–1500) 3
- 1.1.3 The Age of Enlightenment (1650–1800) 4
- 1.1.4 The Industrial Revolution (1760–1890) 5
- 1.1.5 The Progressive Era (1890–1920) 6
- 1.1.6 The Great Depression and World War II (1920–1945) 7
- 1.1.7 Post-war era (1945 to present) 7
- 1.1.8 Present day 8

1.2 Significant national and international environmental concerns 10

- 1.2.1 Water quality 10
- 1.2.2 Solid waste management 10

1.3 Prominent federal environmental statutes – an overview 10

- 1.3.1 Regulations of chemical manufacturing 11
- 1.3.2 Regulation of discharges to air, water, and soil 12
- 1.3.3 Cleanup, disclosure, and pollution prevention 14

1.4 An approach to problem solving: a six-step method 15

1.5 Data collection, analysis, interpretation, and communication 18

- 1.5.1 Analysis of experimental data 18
- 1.5.2 Using tables and figures to analyze and communicate results 24
- 1.5.3 Linear regression and the correlation coefficient 25
- 1.5.4 Interpreting linear, power, and exponential equations 28
- 1.5.5 Student's *t*-test 31
- 1.5.6 One-way analysis of variance (ANOVA) 35

Summary 38

Problems 41

2 Essential chemistry concepts 43

Richard O. Mines, Jr.

Learning Objectives 43

2.1 Introduction 43

2.2 Dimensions, units, and conversions 43

- 2.2.1 Density 45
- 2.2.2 Specific gravity 46
- 2.2.3 Concentrations 46
- 2.2.4 Mass and volumetric flow rates 49
- 2.2.5 Detention time 50

2.3 Balancing reactions 50

2.4 Oxidation-reduction reactions 52

2.5 Thermodynamic equilibrium 53

- 2.5.1 First law of thermodynamics 53
- 2.5.2 Second law of thermodynamics 56
- 2.5.3 Gibbs free energy, ΔG 58
- 2.5.4 Extent of reaction, equilibrium constant (*K*) 59

2.6 Acid-base chemistry 60

- 2.6.1 Strong acid and base solutions 62
- 2.6.2 Weak acids and bases 63
- 2.6.3 pC-pH diagrams 68
- 2.6.4 Buffers 74
- 2.6.5 Carbonate system and alkalinity 76

2.7 Solubility (solubility product) 82

2.8 Gas phase laws 84

- 2.8.1 Boyle's law 84
- 2.8.2 Charles's law 84
- 2.8.3 Avogadro's law 85
- 2.8.4 Ideal gas law 85
- 2.8.5 Dalton's law 86
- 2.8.6 Raoult's law 87
- 2.8.7 Henry's law 87

2.9 Organic chemistry overview 89

- 2.9.1 Introduction to hydrocarbons (alkanes, alkenes, and alkynes) 89
- 2.9.2 Aromatic hydrocarbons 91
- 2.9.3 Heterocyclic organic compounds 95
- 2.9.4 Functional groups of environmental importance 95

3 Water and wastewater characteristics 103

Richard O. Mines, Jr.

Learning Objectives 103

3.1 Overview 103

| | | |
|-------|---|-----|
| 3.2 | Water quality parameters | 103 |
| 3.3 | Lumped parameter organic quantification | 104 |
| 3.3.1 | Theoretical oxygen demand (ThOD) | 104 |
| 3.3.2 | Biochemical oxygen demand (BOD) | 105 |
| 3.3.3 | Nitrogenous oxygen demand (NOD) | 109 |
| 3.3.4 | Chemical oxygen demand (COD) | 109 |
| 3.3.5 | Total organic carbon (TOC) | 110 |
| 3.4 | Physical parameters | 110 |
| 3.4.1 | Color | 110 |
| 3.4.2 | Taste and odor | 111 |
| 3.4.3 | Solids | 112 |
| 3.4.4 | Temperature | 114 |
| 3.4.5 | Absorbance and transmittance | 115 |
| 3.4.6 | Turbidity | 115 |
| 3.5 | Inorganic chemical parameters | 116 |
| 3.5.1 | pH | 116 |
| 3.5.2 | Overview of alkalinity and acidity | 116 |
| 3.5.3 | Alkalinity | 119 |
| 3.5.4 | Nitrogen | 125 |
| 3.5.5 | Phosphorus | 126 |
| 3.5.6 | Metals | 126 |
| 3.5.7 | Gases | 127 |
| 3.6 | Biological and microbiological characteristics | 129 |
| 3.6.1 | Bacteria | 129 |
| 3.6.2 | Viruses | 130 |
| 3.6.3 | Protozoa | 130 |
| 3.6.4 | Helminths | 130 |
| 3.6.5 | Indicator organisms | 130 |
| 3.7 | Sample water quality data | 133 |
| | Summary | 135 |
| | Key words | 136 |
| | References | 136 |
| | Problems | 137 |

4 Essential biology concepts 139

Richard O. Mines, Jr.

Learning Objectives 139

| | | |
|-------|---|-----|
| 4.1 | Introduction to microbiological unit processes | 139 |
| 4.2 | Cell basics | 140 |
| 4.3 | Energy and synthesis (carbon and energy transformations) | 140 |
| 4.3.1 | Heterotrophs and energy capture | 142 |
| 4.3.2 | Autotrophs | 144 |
| 4.3.3 | Energy | 145 |
| 4.3.4 | Growth regulating environmental factors (temperature, pH, moisture, oxygen) | 146 |
| 4.3.5 | Biochemistry overview | 148 |
| 4.4 | Michaelis-Menten enzyme kinetics | 149 |
| 4.4.1 | Limiting conditions | 152 |
| 4.5 | Introduction to ecology | 153 |
| 4.5.1 | Food chains | 153 |
| 4.6 | Primary productivity | 155 |
| 4.6.1 | Distribution on earth | 157 |
| 4.6.2 | Measurement of Productivity | 159 |
| 4.7 | Introduction to biochemical cycles | 160 |
| 4.7.1 | Carbon cycle | 160 |
| 4.7.2 | Nitrogen | 161 |

4.7.3 Phosphorus 164

4.7.4 Sulfur 167

4.8 Population dynamics 169

4.8.1 Bacterial population growth 170

4.8.2 Human Population Dynamics 174

4.8.3 World population growth 176

4.9 River water quality management 178

4.9.1 Total maximum daily load (TMDL) 178

4.9.2 Dissolved oxygen depletion in streams 180

4.10 Limnology 184

4.10.1 Introduction 184

4.10.2 Light transmission in lakes 184

4.10.3 Nutrient management 185

4.10.4 Stratification and turnover in lakes 186

Summary 188

Problems 191

5 Environmental systems: modeling and reactor design 195

Richard O. Mines, Jr.

Learning Objectives 195

5.1 Introduction 195

5.2 Material balances 195

5.2.1 Steady-state modeling 198

5.2.2 Dynamic or transient modeling 200

5.3 Reaction kinetics 202

5.3.1 Rates of reaction 202

5.3.2 Rate law and order of reaction 203

5.3.3 Reactions 204

5.3.4 Zero-order reactions 205

5.3.5 First-order reactions 205

5.3.6 Second-order reactions 207

5.3.7 Temperature corrections 208

5.4 Flow regimes and reactors 209

5.4.1 Flow regimes 209

5.4.2 Reactors 210

5.4.3 Tracer studies 216

5.5 Energy balances 218

5.5.1 Energy fundamentals 219

5.5.2 First law of thermodynamics 223

5.5.3 Second law of thermodynamics 230

6 Design of water treatment systems 239

Richard O. Mines, Jr.

Learning Objectives 239

6.1 Drinking water standards 239

6.1.1 Primary drinking water standards 240

- 6.1.2 Secondary drinking water standards 240
- 6.1.3 Other rules promulgated by EPA 240
- 6.2 Overview of typical processes used for contaminant removal 245**
 - 6.2.1 Alkalinity 245
 - 6.2.2 Arsenic 245
 - 6.2.3 Barium 246
 - 6.2.4 Cadmium 246
 - 6.2.5 Chromium 246
 - 6.2.6 Color 246
 - 6.2.7 Fluoride 246
 - 6.2.8 Gases 246
 - 6.2.9 Iron 246
 - 6.2.10 Lead 246
 - 6.2.11 Manganese 247
 - 6.2.12 Mercury 247
 - 6.2.13 Nitrate 247
 - 6.2.14 pH 247
 - 6.2.15 Radionuclides 247
 - 6.2.16 Taste and odor 247
 - 6.2.17 Total organic carbon (TOC) 247
- 6.3 Design flows and capacities 247**
 - 6.3.1 Water demand 248
 - 6.3.2 Fire demand 248
 - 6.3.3 Design capacities 249
- 6.4 Preliminary treatment 249**
 - 6.4.1 Screens 250
 - 6.4.2 Pre-sedimentation 250
 - 6.4.3 Absorption and desorption 251
 - 6.4.4 Air stripping or degasification 251
 - 6.4.5 Adsorption 258
 - 6.4.6 Pre-disinfection 258
- 6.5 Mixing, coagulation, and flocculation 258**
 - 6.5.1 Overview 258
 - 6.5.2 Colloidal particles 259
 - 6.5.3 Electrical double layer theory 260
 - 6.5.4 Colloidal destabilization 260
 - 6.5.5 Coagulants 261
 - 6.5.6 Mixing 264
 - 6.5.7 Flocculation 265
- 6.6 Water softening 267**
 - 6.6.1 Chemical precipitation 268
 - 6.6.2 Lime-soda ash softening stoichiometric equations 270
 - 6.6.3 Process treatment trains for softening 272
 - 6.6.4 Other softening methods 276
- 6.7 Sedimentation 276**
 - 6.7.1 Free settling 277
 - 6.7.2 Flocculent settling 277
 - 6.7.3 Ideal settling basin 280
- 6.8 Filtration 283**
 - 6.8.1 Filter Classification 283
 - 6.8.2 Suspended solids removal mechanisms 283
 - 6.8.3 Filter media 284
 - 6.8.4 Granular media filtration 285
 - 6.8.5 Derivation of head loss through a clean filter 286
 - 6.8.6 Backwashing of filters 289
 - 6.8.7 Backwash hydraulics 290
 - 6.8.8 Filter arrangement 293
- 6.9 Membrane treatment 293**
 - 6.9.1 Diffusion 294
 - 6.9.2 Osmosis 294
 - 6.9.3 Reverse osmosis 294

- 6.9.4 Membrane terminology 295
- 6.9.5 RO membranes 296
- 6.9.6 Membrane configurations 296
- 6.9.7 Pre- and post-treatment of feed and finished water 296
- 6.9.8 Design equations for reverse osmosis 298
- 6.9.9 Water mass transfer coefficients units 301

6.10 Fluoridation 303

6.11 Disinfection in water treatment 303

- 6.11.1 Goal of disinfection 304
- 6.11.2 Disinfection Kinetics and $C \cdot t$ concept 304
- 6.11.3 Major disinfectants 306

6.12 Residuals, solids, and quantities of sludge 310

- 6.12.1 Sludge mass-volume relationships 311
- 6.12.2 Residuals processing options 312
- 6.12.3 Thickening 312
- 6.12.4 Conditioning 316
- 6.12.5 Dewatering 316
- 6.12.6 Ultimate disposal 322

Problems 325

7 Design of wastewater treatment systems 331

Richard O. Mines, Jr.

Learning Objectives 331

7.1 Wastewater standards 331

- 7.1.1 Secondary treatment 331
- 7.1.2 Advanced wastewater treatment (AWT) 332
- 7.1.3 Water quality standards 332
- 7.1.4 NPDES permits and effluent standards 333
- 7.1.5 Total maximum daily loads (TMDLs) 333

7.2 Design flows and loadings 333

- 7.2.1 Design flows and capacities 334
- 7.2.2 Peaking factors 334
- 7.2.3 Design parameters and loadings 335

7.3 Preliminary treatment 340

- 7.3.1 Screens 340
- 7.3.2 Grit removal 341

7.4 Primary sedimentation 345

7.5 Secondary wastewater treatment 348

- 7.5.1 Microbial growth 348
- 7.5.2 Microbial growth in batch reactor 349
- 7.5.3 Microbial growth in continuous flow reactor 350
- 7.5.4 Activated sludge 350
- 7.5.5 Design and operational parameters 352
- 7.5.6 Biochemical kinetics of complete-mix activated sludge (CMAS) systems 353
- 7.5.7 Biokinetic coefficient determination 362
- 7.5.8 Biochemical kinetics of activated sludge in plug flow systems 366
- 7.5.9 Activated sludge modifications 368
- 7.5.10 Sequencing batch reactor (SBR) 371

7.6 Oxygen transfer and mixing 375

- 7.6.1 Theory 375
- 7.6.2 Derivation of mass transfer equation 375

- 7.6.3 Types of aeration systems 376
- 7.6.4 Aerator testing 376
- 7.6.5 Derivation of oxygen transfer equation 377
- 7.6.6 Mixing requirements 378
- 7.6.7 Design of diffused aeration systems 379
- 7.7 **Attached-growth biological systems** 381
 - 7.7.1 Trickling filters 381
 - 7.7.2 Rotating biological contactors 385
- 7.8 **Advanced biological treatment systems** 388
 - 7.8.1 Biological nitrogen removal 388
 - 7.8.2 Phosphorus removal systems 399
 - 7.8.3 Combined biological nitrogen and phosphorus removal processes 400
- 7.9 **Secondary clarification** 401
 - 7.9.1 Type II and Type III settling 402
 - 7.9.2 Solid flux theory 402
 - 7.9.3 Type IV settling 404
 - 7.9.4 Secondary clarifier design for suspended growth systems 405
 - 7.9.5 Secondary clarifier design for attached-growth systems 407
- 7.10 **Disinfection** 408
 - 7.10.1 Methods of disinfection 408
 - 7.10.2 Proposed disinfection mechanism 409
 - 7.10.3 Chlorination equipment 409
 - 7.10.4 Chlorine contact basin design 409
 - 7.10.5 Dechlorination 411
- 7.11 **Solids handling and treatment systems** 411
 - 7.11.1 Solids and sludge sources and quantities of sludge 411
 - 7.11.2 Sludge mass-volume relationships 412
 - 7.11.3 Sludge unit operations and processes 413
 - 7.11.4 Sludge thickening systems 413
 - 7.11.5 Sludge stabilization 418
 - 7.11.6 Conditioning 424
 - 7.11.7 Sludge dewatering systems 425
 - 7.11.8 Sludge drying beds 429
 - 7.11.9 Sludge reuse and disposal 430

Problems 438

8 **Municipal solid waste management** 449

Philip T. McCreanor

Learning Objectives 449

- 8.1 **Introduction** 449
- 8.2 **Regulations** 450
- 8.3 **Waste generation – international perspectives** 451
- 8.4 **Waste generation in the United States** 451
- 8.5 **Waste composition** 451
- 8.6 **Properties of municipal solid waste** 456
 - 8.6.1 Specific weight (γ) 456
 - 8.6.2 Moisture content 457
 - 8.6.3 Field capacity 458

- 8.6.4 Hydraulic conductivity (K) 458
- 8.6.5 Chemical composition 458
- 8.6.6 Energy content 459
- 8.6.7 Biological properties 461
- 8.7 **Municipal landfill design** 461
 - 8.7.1 Sizing a landfill 461
 - 8.7.2 Leachate Production and Removal 462
 - 8.7.3 Leachate collection and recovery system 463
 - 8.7.4 Leakage through a clay barrier layer 464
 - 8.7.5 Leakage through perforations in a geomembrane liner 464
 - 8.7.6 Vapor diffusion across a geomembrane liner 464
 - 8.7.7 Stormwater control 465
 - 8.7.8 Gas generation and control 465
 - 8.7.9 Monitoring and post-closure care 473
- 8.8 **Case study – Mecklenburg County, North Carolina (NC), USA** 473

9 **Air pollution** 479

Arthur B. Nunn, III

Learning Objectives 479

- 9.1 **Principal air pollutants** 479
- 9.2 **Air pollution sources** 481
- 9.3 **Pollutant affects on humans and environment** 484
 - 9.3.1 Global climate change 485
 - 9.3.2 Tropospheric ozone 487
 - 9.3.3 Stratospheric ozone 487
 - 9.3.4 Acid rain 487
 - 9.3.5 Visibility 488
- 9.4 **Air pollution meteorology** 488
- 9.5 **Dispersion modeling** 490
- 9.6 **Air pollution control technologies** 493
 - 9.6.1 Particulate emissions control 494
 - 9.6.2 Gaseous emissions control 505
- 9.7 **Indoor Air Pollution** 514
