First Principles Approaches to Spectroscopic Properties of Complex Materials

With contributions by

F. Angelis · L.I. Bendavid · S. Biermann · S. Blügel ·
F. Bruneval · E.A. Carter · I. Dabo · J.K. Dewhurst ·
S. Fantacci · A. Ferretti · C. Friedrich · M. Gatti ·
E.K.U. Gross · M. Hopjan · L. Kronik · S. Kümmel ·
N. Marzari · M. Müller · M. Pastore · E. Şaşioğlu ·
A. Schindlmayr · A. Selloni · S. Sharma · C. Verdozzi

 Springer

Contents

Electronic and Optical Properties of Dye-Sensitized TiO₂ Interfaces	1
Mariachiara Pastore, Annabella Selloni, Simona Fantacci, and Filippo De Angelis	
Status in Calculating Electronic Excited States in Transition Metal Oxides from First Principles	47
Leah Isseroff Bendavid and Emily Ann Carter	
Quasiparticle Self-Consistent <i>GW</i> Method for the Spectral Properties of Complex Materials	99
Fabien Bruneval and Matteo Gatti	
Gas-Phase Valence-Electron Photoemission Spectroscopy Using Density Functional Theory	137
Leor Kronik and Stephan Kümmel	
Piecewise Linearity and Spectroscopic Properties from Koopmans-Compliant Functionals	193
Ismaila Dabo, Andrea Ferretti, and Nicola Marzari	
Optical Response of Extended Systems Using Time-Dependent Density Functional Theory	235
S. Sharma, J.K. Dewhurst, and E.K.U. Gross	
Spin Excitations in Solids from Many-Body Perturbation Theory	259
Christoph Friedrich, Ersoy Şaşıoğlu, Mathias Müller, Arno Schindlmayr, and Stefan Blügel	
Dynamical Mean Field Theory-Based Electronic Structure Calculations for Correlated Materials	303
Silke Biermann	

Probing Strongly Correlated Materials in Non-equilibrium: Basic Concepts and Possible Future Trends in First Principle Approaches ...	347
M. Hopjan and C. Verdozzi	
The Bethe–Salpeter Equation	385
Index	389
