<i>Acronyms</i>	xxv
<b>1 Short Historical Notes on Motor Vehicles</b>	<b>1</b>
1.1 Ground vehicles with mechanical propulsion . . . . .	1
1.2 Vehicles on wheels from prehistory to the end of the Roman Empire . . . . .	2
1.3 From the middle ages to the industrial revolution . .	16
1.4 Motor vehicles in the 19 <sup>th</sup> century . . . . .	28
1.5 The age of motor cars . . . . .	41
1.6 A glimpse into the future . . . . .	45
<b>I FORCES ACTING ON THE VEHICLE</b>	<b>65</b>
<b>2 The Tire as a Supporting Device</b>	<b>67</b>
2.1 Wheels for road vehicles . . . . .	67
2.2 Structure of pneumatic tires . . . . .	69
2.3 Tire reference frame . . . . .	73
2.4 Contact pressure and stiffness . . . . .	75
2.5 Rolling radius . . . . .	79
2.6 Rolling resistance . . . . .	81

- 2.7 Dynamic behavior of tires . . . . . 96
- 2.8 Experimental study of the characteristics  
of tires . . . . . 97
- 3 Driving, Braking and Cornering Forces 101**
  - 3.1 Tractive and braking forces . . . . . 102
  - 3.2 Cornering forces . . . . . 111
  - 3.3 Interaction between longitudinal and side forces . . . 124
  - 3.4 Mathematical models for the longitudinal  
and side forces . . . . . 128
  - 3.5 Behavior of tires in dynamic conditions . . . . . 145
- 4 Road Vehicle Aerodynamics 149**
  - 4.1 General considerations . . . . . 149
  - 4.2 Reference frames . . . . . 152
  - 4.3 Aerodynamic forces and moments . . . . . 154
  - 4.4 Aerodynamic field . . . . . 162
  - 4.5 Aerodynamic drag . . . . . 170
  - 4.6 Aerodynamic lift and pitching moment . . . . . 188
  - 4.7 Side force, rolling and yawing moments . . . . . 194
  - 4.8 Experimental study of aerodynamic forces  
and moments . . . . . 198
  - 4.9 Numerical aerodynamics . . . . . 204
- II DYNAMICS OF A RIGID VEHICLE 209**
  - 5 Longitudinal Steady-State Dynamics 211**
    - 5.1 Reference frames for the rigid vehicle . . . . . 211
    - 5.2 Load distribution on the ground . . . . . 213
    - 5.3 Total resistance to motion . . . . . 222
    - 5.4 Characteristics of internal combustion engines . . . . 224
    - 5.5 Transmission . . . . . 229
    - 5.6 Maximum power which can be transferred  
to the road . . . . . 232
    - 5.7 Maximum performances allowed by the engine . . . 240

5.8	Fuel consumption at constant speed . . . . .	245
5.9	Electric and hybrid vehicles . . . . .	248
<b>6</b>	<b>Longitudinal Dynamics during Acceleration</b>	<b>271</b>
6.1	Non steady-state longitudinal dynamics . . . . .	271
6.2	Maximum acceleration . . . . .	274
6.3	Vehicle take-off from rest . . . . .	280
6.4	Models accounting for the tire slip . . . . .	287
6.5	Model including the clutch and the tire . . . . .	290
6.6	Coupling between longitudinal and driveline dynamics . . . . .	293
6.7	Dynamic model of the engine . . . . .	307
6.8	Multibody driveline models . . . . .	337
6.9	Control systems for longitudinal dynamics . . . . .	338
6.10	Fuel consumption in actual driving conditions . . . . .	345
<b>7</b>	<b>Braking</b>	<b>355</b>
7.1	Braking in ideal conditions . . . . .	355
7.2	Braking in actual conditions . . . . .	360
7.3	Braking power . . . . .	366
7.4	Antilock systems (ABS) . . . . .	368
7.5	An outline on standards for braking systems . . . . .	375
7.6	Global model for longitudinal dynamics . . . . .	378
<b>8</b>	<b>Steady-State Handling</b>	<b>383</b>
8.1	Trajectory control in road vehicles . . . . .	383
8.2	Steady-state cornering: geometry . . . . .	387
8.3	Low-speed or kinematic steering . . . . .	393
8.4	Simplified model: Ideal steering . . . . .	399
8.5	High-speed cornering of a rigid vehicle . . . . .	408
8.6	Linearized handling model . . . . .	416
8.7	Linearized steady state directional behavior . . . . .	426
8.8	Slip steering . . . . .	442
8.9	Influence of longitudinal forces on the handling . . . . .	444
8.10	Transversal load shift . . . . .	448
8.11	Toe in . . . . .	450

8.12	Vehicles with two steering axles (4WS) . . . . .	451
8.13	Limits of linearized models . . . . .	455
8.14	Semilinearized models . . . . .	456
<b>9</b>	<b>Non-Steady-State Handling</b>	<b>463</b>
9.1	Equations of motion for high-speed cornering . . . . .	463
9.2	Linearized handling model . . . . .	466
9.3	Spring, mass, damper analogy . . . . .	470
9.4	Stability of the vehicle . . . . .	471
9.5	Unstationary motion . . . . .	485
9.6	Steering response in dynamic conditions . . . . .	491
9.7	Handling control system . . . . .	495
9.8	Vehicle-driver interaction . . . . .	504
<b>10</b>	<b>Vehicles with Trailers</b>	<b>521</b>
10.1	Kinematic steering of vehicles with trailer . . . . .	521
10.2	Simplified dynamic trailer models . . . . .	529
10.3	Model with 4 degrees of freedom for articulated vehicles . . . . .	538
10.4	Linearized model for articulated vehicles . . . . .	547
10.5	Multibody articulated vehicles . . . . .	563
<b>III</b>	<b>DYNAMICS OF A VEHICLE ON ELASTIC SUSPENSIONS</b>	<b>575</b>
<b>11</b>	<b>Noise, Vibration, Harshness (NVH)</b>	<b>577</b>
11.1	Causes for vibrations affecting motor vehicles . . . . .	577
11.2	Internal excitation . . . . .	578
11.3	Road excitation . . . . .	585
11.4	Effects of vibration on the human body . . . . .	589
<b>12</b>	<b>Types of Suspensions</b>	<b>593</b>
12.1	Motor vehicle on elastic suspensions . . . . .	593
12.2	Solid-axle suspensions . . . . .	596
12.3	Independent-wheels suspensions . . . . .	603

12.4	Twist beam suspension . . . . .	619
12.5	Camber recovery . . . . .	624
12.6	Anti-dive and anti-squat designs . . . . .	625
12.7	Active suspensions . . . . .	630
<b>13</b>	<b>Simple Suspension Models</b>	<b>633</b>
13.1	Quarter-car models . . . . .	633
13.2	Quarter-car with a single degree of freedom . . . . .	634
13.3	Quarter-car with two degrees of freedom . . . . .	646
13.4	International roughness index . . . . .	655
13.5	Quarter-car with secondary suspension (three degrees of freedom) . . . . .	656
13.6	Quarter-car model with dynamic vibration absorber . . . . .	659
13.7	Quarter-car model with J-damper . . . . .	662
13.8	Quarter-car with many degrees of freedom to study the suspension-tire interaction . . . . .	667
13.9	Effect of the suspension kinematics . . . . .	674
13.10	Heave and pitch motions . . . . .	682
13.11	Roll motion . . . . .	707
13.12	Concluding remarks on ride comfort . . . . .	712
13.13	Active suspensions . . . . .	717
<b>14</b>	<b>Multibody Models</b>	<b>749</b>
14.1	Models for motor vehicles . . . . .	749
14.2	Isolated vehicle . . . . .	756
14.3	Linearized model for the isolated vehicle . . . . .	759
14.4	Model with 10 degrees of freedom with locked controls . . . . .	796
14.5	Handling of a vehicle on elastic suspensions . . . . .	818
14.6	Ride comfort . . . . .	823
14.7	Conclusions on the linearized models made of rigid bodies . . . . .	828
14.8	Models of deformable vehicles . . . . .	829
14.9	Articulated vehicles . . . . .	839

14.10 Gyroscopic moments and other second order effects . . . . .	840
14.11 Simple model for the handling of motorcycles . . . .	844
<b>15 Models for Studying Road Accidents</b>	<b>885</b>
15.1 Road safety . . . . .	885
15.2 Vehicle collision: Impulsive model . . . . .	889
15.3 Vehicle collision: Advanced model . . . . .	906
15.4 Motion after the collision . . . . .	922
15.5 Rollover . . . . .	931
15.6 Motion of transported objects during the impact . . . . .	943
