Optimal Designs for the Prediction in Hierarchical Random Coefficient Regression Models

Dissertation

zur Erlangung des akademischen Grades

doctor rerum naturalium
(Dr. rer. nat.)

von Dipl.-Wirt.-Math. Maryna Prus

geb. am 17.08.1982 in Gorlowka, Ukraine

genehmigt durch die Fakultät für Mathematik
der Otto-von-Guericke-Universität Magdeburg

Gutachter: Prof. Dr. Rainer Schwabe
Prof. Julia Volaufova, Ph.D.

eingereicht am: 28.04.2015

Verteidigung am: 15.07.2015

Contents

1 Introduction **1**

2 Optimal Designs in Classical Linear Regression and Bayesian Models **3**

2.1 Model Specification and Estimation 3

2.1.1 Fixed Effects Models 3

2.1.2 Bayesian Models 5

2.2 Optimal Designs 6

2.2.1 D-Optimal Designs 7

2.2.2 L-Optimal Designs 9

3 Estimation and Prediction in Linear Mixed Models **11**

3.1 Prediction in the Case of a Full Column Rank Fixed Effects Design Matrix 12

3.2 Prediction in the Case of a General Fixed Effects Design Matrix 14

4 Estimation and Prediction in Hierarchical Random Coefficient Regression Models **24**

4.1 Hierarchical Random Coefficient Regression Models: Model Formulation . 24

4.2 Predictable Linear Aspects in Hierarchical Random Coefficient Regression Models 26

4.3 Prediction of Individual Deviations 32

4.4 Prediction of Individual Parameters 36

5 Optimal Designs in Hierarchical Random Coefficient Regression Models **40**

5.1 D-Criterion 41

5.2 Linear Criteria 50

5.3 Example: Linear Regression with Random Slope 58

5.4 Construction of Optimal Designs by Equivariance 62

6 Multi-Group Models **72**

6.1 Estimation and Prediction in Multi-Group Models 72

6.2 Optimal Designs 75

7 Discussion and Outlook **81**
7.1 Summary and Discussion 81
7.2 Further Considerations 82
