Preface	xv
Part 1 Carbon Nanomaterials	1
1 Easy and Large-Scale Synthesis of Carbon Nanotube-Based Adsorbents for the Removal of Arsenic and Organic Pollutants from Aqueous Solutions	3
<i>Fei Yu and Jie Ma</i>	
1.1 Introduction	4
1.2 Removal of Arsenic from Aqueous Solution	5
1.2.1 Activated Magnetic Carbon Nanotube	5
1.2.1.1 Synthesis Method	5
1.2.1.2 Characterization of Adsorbents	5
1.2.1.3 Adsorption Properties	9
1.2.2 Sulfhydryl-Functionalized Magnetic Carbon Nanotube	12
1.2.2.1 Synthesis Method	12
1.2.2.2 Characterization of Adsorbents	13
1.2.2.3 Adsorption Properties	19
1.3 Removal of Organic Pollutants from Aqueous Solution	22
1.3.1 Magnetic Carbon Nanotubes for Dye Removal	22
1.3.1.1 Synthesis Method	22
1.3.1.2 Characterization of Adsorbents	22
1.3.1.3 Adsorption Properties	26
1.3.2 Magnetic CNTs/C@Fe/Chitosan for Tetracycline Removal	31
1.3.2.1 Synthesis Method	31
1.3.2.2 Characterization of Adsorbents	31
1.3.2.3 Adsorption Properties	34
1.4 Summary and Outlook	39
Acknowledgment	40
References	40

2	Potentialities of Graphene-Based Nanomaterials for Wastewater Treatment	47
	<i>Ana L. Cukierman, Emiliano Platero, María E. Fernandez, and Pablo R. Bonelli</i>	
2.1	Introduction	48
2.2	Graphene Synthesis Routes	49
2.3	Adsorption of Water Pollutants onto Graphene-Based Materials	52
2.3.1	Adsorption of Heavy Metals	54
2.3.2	Adsorption of Organic Contaminants	63
2.3.2.1	Dyes	64
2.3.2.2	Other Organic and Emerging Contaminants	67
2.4	Comparison of the Adsorption Performance of Graphene-Based Nanomaterials	72
2.5	Regeneration and Reutilization of the Graphene-Based Adsorbents	73
2.6	Conclusion	77
	Acknowledgements	78
	Nomenclature	78
	References	79
3	Photocatalytic Activity of Nanocarbon-TiO₂ Composites with Gold Nanoparticles for the Degradation of Water Pollutants	87
	<i>L.M. Pastrana-Martínez, S.A.C. Carabineiro, J.L. Figueiredo, J.L. Faria, A.M.T. Silva, and J.G. Buijnsters</i>	
3.1	Introduction	88
3.2	Experimental	90
3.2.1	Carbon Materials Preparation	90
3.2.2	Synthesis of Carbon-TiO ₂ Hybrid Catalysts	90
3.2.3	Synthesis of Au-Loaded TiO ₂ Catalysts	91
3.2.4	Catalysts Characterization	91
3.2.5	Photocatalytic Degradation of DP Using Hybrid Catalysts	92
3.3	Results and Discussion	93
3.3.1	Materials Characterization	93
3.3.2	Diphenhydramine Photocatalytic Degradation	98
3.4	Conclusions	101
	Acknowledgements	102
	References	102

4	Carbon Nanomaterials for Chromium (VI) Removal from Aqueous Solution	109
	<i>Pavel Kopel, Vedran Milosavljevic, Dorota Wawrzak, Amitava Moulick, Marketa Vaculovicova, Rene Kizek, and Vojtech Adam</i>	
4.1	Introduction	110
4.2	Carbon Nanomaterials for Heavy Metal Removal	111
4.3	Latest Progress in Nanocarbon Materials for Cr(VI) Treatment	113
4.3.1	Graphene and Graphene Oxide-Based Materials	113
4.3.2	Magnetic-Based Graphene Materials	116
4.3.3	MWNT and SWNT	118
4.3.4	Magnetic Carbon Adsorbents	120
4.4	Summary	121
	Acknowledgement	121
	References	121
5	Nano-Carbons from Pollutant Soot: A Cleaner Approach toward Clean Environment	127
	<i>Kumud Malika Tripathi, Nidhi Rani Gupta, and Sumit Kumar Sonkar</i>	
5.1	Introduction	127
5.2	Separation of Nano-carbon from Pollutant BC	131
5.3	Functionalization of Nano-Carbons Isolated from Pollutant BC	135
5.4	Nano-Carbons from Pollutant Soot for Wastewater Treatment	141
5.4.1	Removal of Organic Pollutant	141
5.4.2	Water Purification, Sensing, and Removal of Heavy Metal Ions	143
5.5	Conclusion	145
	Acknowledgments	146
	References	146
6	First-Principles Computational Design of Graphene for Gas Detection	155
	<i>Yoshitaka Fujimoto</i>	
6.1	Introduction	155
6.2	Computational Methodology	157

6.3	Nitrogen Doping and Nitrogen Vacancy Complexes in Graphene	158
6.3.1	Atomic Structures	158
6.3.2	Energetics	161
6.3.3	Electronic Structures	163
6.4	Molecular Gas Adsorptions	166
6.4.1	Energetics and Structure	166
6.4.1.1	Hydrogen Adsorption	166
6.4.1.2	Water and Ammonia Molecular Adsorptions	169
6.4.2	Electronic Properties	171
6.5	Summary	174
	Acknowledgments	174
	References	175
Part 2	Synthetic Nanomaterials	179
7	Advanced Material for Pharmaceutical Removal from Wastewater	181
	<i>Parisa Amouzgar, May Yuan Wong, Bahman Amini Horri, and Babak Salamatinia</i>	
7.1	Introduction	182
7.2	Advanced Materials in the Removal of Pharmaceuticals from Wastewater	185
7.3	Activated Carbon (AC)	185
7.4	Modified Carbon Nanotubes (CNTs)	186
7.5	Modified Polysaccharide Matrices	188
7.6	Metal Organic Framework (MOF)	190
7.7	Reactive Composites	191
7.8	TiO ₂ -Coated Adsorbents	192
7.9	Adsorption by Zeolite and Polymer Composites	192
7.10	Adsorption by Clay	193
7.11	Conventional Technologies for the Removal of PPCPs in WWTP	200
7.12	Membrane Filtration	201
7.13	Ozonation and Advanced Oxidation Process (AOP)	201
7.14	Electro-oxidation	202
7.15	Adsorption by Coagulation and Sedimentation	202
7.16	Conclusion	203
	References	203

6.3	Nitrogen Doping and Nitrogen Vacancy Complexes in Graphene	158
6.3.1	Atomic Structures	158
6.3.2	Energetics	161
6.3.3	Electronic Structures	163
6.4	Molecular Gas Adsorptions	166
6.4.1	Energetics and Structure	166
6.4.1.1	Hydrogen Adsorption	166
6.4.1.2	Water and Ammonia Molecular Adsorptions	169
6.4.2	Electronic Properties	171
6.5	Summary	174
	Acknowledgments	174
	References	175

Part 2 Synthetic Nanomaterials 179

7	Advanced Material for Pharmaceutical Removal from Wastewater	181
	<i>Parisa Amouzgar, May Yuan Wong, Bahman Amini Horri, and Babak Salamatinia</i>	
7.1	Introduction	182
7.2	Advanced Materials in the Removal of Pharmaceuticals from Wastewater	185
7.3	Activated Carbon (AC)	185
7.4	Modified Carbon Nanotubes (CNTs)	186
7.5	Modified Polysaccharide Matrices	188
7.6	Metal Organic Framework (MOF)	190
7.7	Reactive Composites	191
7.8	TiO ₂ -Coated Adsorbents	192
7.9	Adsorption by Zeolite and Polymer Composites	192
7.10	Adsorption by Clay	193
7.11	Conventional Technologies for the Removal of PPCPs in WWTP	200
7.12	Membrane Filtration	201
7.13	Ozonation and Advanced Oxidation Process (AOP)	201
7.14	Electro-oxidation	202
7.15	Adsorption by Coagulation and Sedimentation	202
7.16	Conclusion	203
	References	203

8 Flocculation Performances of Polymers and Nanomaterials for the Treatment of Industrial Wastewaters	213
<i>E. Fosso-Kankeu, F. Waanders, A.F. Mulaba-Bafubandi, and A.K. Mishra</i>	
8.1 General Introduction	214
8.2 Conventional Treatment of Water with Inorganic Coagulants	214
8.2.1 Inorganic Coagulants	214
8.2.2 Electroflocculation	216
8.3 Development of Polymer-Based Coagulants and Mechanisms of Turbidity Removal	219
8.3.1 Inorganic and Organic Polymers	219
8.3.1.1 Inorganic Polymers	219
8.3.1.2 Organic Polymers	221
8.3.2 Copolymerisation	222
8.4 Synthesis of Nanomaterials-Based Flocculants and Utilisation in the Removal of Pollutants	223
8.4.1 Flocculants Derived from Carbonaceous Nonomaterials	224
8.4.2 Flocculants Derived from Magnetic Nanomaterials	226
8.5 Conclusion	227
References	228
9 Polymeric Nanospheres for Organic Waste Removal	237
<i>Ambika and Pradeep Pratap Singh</i>	
9.1 Introduction	237
9.2 Method of Preparation of Nanospheres	239
9.2.1 Polymerization (Emulsification Polymerization)	239
9.2.2 Solvent Evaporation	239
9.2.3 Solvent Displacement Technique (Nanoprecipitation)	241
9.2.4 Phase Inversion Temperature Method	241
9.3 Applications of Different Type of Nanospheres in Water Purification	241
9.3.1 Magnetic Polymer Nanospheres	241
9.3.2 Silica Nanospheres	244
9.3.3 Carbon Nanospheres	245
9.3.4 Dendritic Polymer Nanospheres	246

9.3.5	Iron Oxide-graphene Oxide Nanocomposite	246
9.3.6	Polyaniline (PANI) Nanospheres	246
9.3.7	Quantum Dot-based nanospheres	246
9.3.8	Miscellaneous	247
9.4	Future Aspects	248
9.5	Conclusions	248
	Acknowledgment	249
	References	249

10 A Perspective of the Application of Magnetic Nanocomposites and Nanogels as Heavy Metal Sorbents for Water Purification **257**

Hilda Elizabeth Reynel-Avila, Didilia Ileana Mendoza-Castillo, and Adrián Bonilla-Petriciolet

10.1	Introduction	258
10.2	Description of Magnetic Nanoparticles and Nanogels	259
10.3	Routes for the Synthesis of Magnetic Nanoparticles and Nanogels	260
10.3.1	Magnetic Nanoparticles	260
10.3.2	Nanogels	262
10.3.3	Nanocomposites	264
10.4	Heavy Metal Removal from Aqueous Solutions Using Magnetic Nanomaterials and Nanogels	266
10.4.1	Magnetic Nanomaterials for Heavy Metal Removal	267
10.4.2	Nanogels	275
10.5	Desorption, Regeneration, and Final Disposal	278
10.6	Conclusions and Future Perspective	279
	Acknowledgments	280
	References	280

11 Role of Core-Shell Nanocomposites in Heavy Metal Removal **289**

Sheenam Thatai, Parul Khurana, and Dinesh Kumar

11.1	Introduction	289
11.1.1	Types of Materials	291
11.2	Core and Shell Material: Synthesis and Properties	292
11.3	Nanocomposites Material: Synthesis and Properties	295
11.4	Nanocomposite Materials for Water Decontamination Application	297

11.5	Stability of Metal Nanoparticles and Nanocomposites Material	299
	Acknowledgements	302
	References	303
Part 3	Biopolymeric Nanomaterials	311
12	Adsorption of Metallic Ions Cd²⁺, Pb²⁺, and Cr³⁺ from Water Samples Using Brazil Nut Shell as a Low-Cost Biosorbent	313
	<i>Juliana Casarin, Affonso Celso Gonçalves Jr, Gustavo Ferreira Coelho, Marcela Zanetti Corazza, Fernanda Midori de Oliveira, César Ricardo Teixeira Tarley, Adilson Pinheiro, Matheus Meier, and Douglas Cardoso Dragunski</i>	
12.1	Introduction	314
12.2	Materials and Methods	314
12.2.1	Material	314
12.2.2	Obtaining Biosorbent and its Characterization	315
12.2.3	Studies on Adsorption as a Function of pH and Biosorbent Mass	315
12.2.4	Adsorption Kinetics	316
12.2.5	Obtaining Equilibrium Isotherm	316
12.2.6	Desorption	317
12.2.7	Adsorption as a Function of Temperature	317
12.2.8	Comparative Studies Between Biosorbent and Activated Coal	317
12.3	Results and Discussion	318
12.3.1	Characterization of the Biosorbent	318
12.3.2	Dependence of pH and Adsorbent Mass	319
12.3.3	Adsorption Kinetics	322
12.3.4	Influence of Initial Concentrations of Cd ²⁺ , Pb ²⁺ , and Cr ³⁺	324
12.3.5	Equilibrium Isotherms	324
12.3.6	Desorption	328
12.3.7	Thermodynamic Parameters of Adsorption	329
12.4	Conclusion	330
	Acknowledgments	330
	References	331

13 Cellulose: A Smart Material for Water Purification	335
<i>Bharti Arora, Eun Ha Choi, Masaharu Shiratani, and Pankaj Attri</i>	
13.1 Introduction	336
13.2 Cellulose: Smart Material for Water Treatment	337
13.2.1 Cellulose-Based Materials as Contaminant Adsorbents	337
13.2.1.1 Heavy Metal Ion Removal from Wastewater	337
13.2.1.2 Removal of Organic Compounds and Dyes	339
13.2.2 Cellulose-Based Membranes for Water Filtration	330
13.2.2.1 CA Membranes	340
13.2.2.2 Chemically Modified Cellulose Membranes	341
13.2.2.3 Ultrafine Polysaccharide Nanofibers-Based TFNC Membranes	342
13.2.2.4 Cellulose Triacetate and Propionated Lignin	342
13.3 Conclusion	343
References	343
14 Treatment of Reactive Dyes from Water and Wastewater through Chitosan and its Derivatives	347
<i>Mohammadtaghi Vakili, Mohd Rafatullah, Zahra Gholami and Hossein Farraji</i>	
14.1 Introduction	348
14.2 Dyes	349
14.3 Reactive Dyes	350
14.4 Dye Treatment Methods	351
14.5 Adsorption	352
14.6 Adsorbents for Dye Removal	352
14.7 Chitosan	354
14.7.1 Unmodified Chitosan	355
14.7.2 Physically Modified Chitosan	360
14.7.3 Chemically Modified Chitosan	361
14.7.3.1 Cross-Linking	361
14.7.3.2 Functionalization	364
14.8 Conclusions and Future Perspectives	368
Acknowledgement	369

15 Natural Algal-Based Processes as Smart Approach for Wastewater Treatment	379
<i>D. Annie Jasmine, K.B. Malarmathi, S.C.G. Kiruba Daniel, and S. Malathi</i>	
15.1 Introduction	380
15.2 Algal Species Used in Wastewater Treatment	382
15.3 Factors Affecting the Growth of Algae	385
15.3.1 Factors Increasing the Growth of Algae	386
15.3.2 Harvesting Algal Biomass	386
15.3.3 Flocculation	386
15.3.4 Aggregation by Alum or Metal Salts	387
15.3.5 Aggregation by Cationic Polymers	387
15.3.6 Bioflocculation/Auto-Flocculation	387
15.3.7 Centrifugation/Gravity Sedimentation	387
15.3.8 Filtration	387
15.3.9 Immobilization Techniques	388
15.4 Microalgae and Wastewater Treatment	388
15.4.1 Algal Approach to Treat Municipal Wastewater	388
15.4.2 Algal Approach to Treat Agricultural Wastewater	390
15.5 Case Study of Algal Approach in the Treatment of Municipal Wastewater	390
15.5.1 Case Study 1: Collaborative Work of Rice University and Houston Public Works for Algal-Based Municipal-Based Wastewater Treatment	390
15.5.2 Case Study 2	391
15.6 Biofuel from Algae Treated Wastewater	391
15.6.1 Algal Bioethanol Production Process	392
15.6.1.1 Process 1: Fermentation of Easily Available Starch and Sugar in Microalgae to Ethanol	392
15.6.1.2 Process 2: Direct Production of Ethanol from Microalgal Species	393
15.6.1.3 Process 3: Saccharification and Fermentation of Microalgae for Ethanol Production	394
15.7 Conclusions	394
Acknowledgment	395
References	395
