

Building on fill: geotechnical aspects

Third edition

Ken Watts and Andrew Charles

Contents

Preface to the first edition	viii
Preface to the second edition	ix
Preface to the third edition	x
Acknowledgements	xi
Notation	xii
Abbreviations	xv
Glossary	xvii

Part I: Fills in context **1**

1	Introduction	2
1.1	Historical background	2
1.2	Brownfield sites	4
1.3	Definitions	7
1.4	Engineered and non-engineered fills	8
1.5	Scope	9
1.6	Research at BRE	10

2 **Fill formation and deposits** **12**

2.1	Opencast mining backfill	13
2.2	Colliery spoil	15
2.3	Pulverised fuel ash	16
2.4	Industrial and chemical wastes	18
2.5	Urban fill	19
2.6	Domestic refuse	20
2.7	Infilled docks, pits and quarries	23
2.8	Hydraulic fill	24

Part II: Engineering behaviour of fills **27**

3 **Properties of fills** **29**

3.1	Characteristics of fill deposits	30
3.2	Index and classification properties	31
3.3	Compactness	34
3.4	Stiffness and compressibility	36
3.5	Shear strength	43
3.6	Dynamic properties	45
3.7	Permeability	47

4	Volume changes in fills	49
4.1	Self-weight of fill	50
4.2	Weight of buildings	52
4.3	Change in groundwater level	57
4.4	Change in moisture content	57
4.5	Decomposition of biodegradable fill	58
4.6	Chemical reactions	61
4.7	Dynamic loading	63

5	Collapse compression on wetting	66
5.1	Mechanisms of collapse compression	67
5.2	Laboratory investigations	67
5.3	Field investigations	68
5.4	Effect of placement conditions on magnitude of collapse potential	69
5.5	Effect of changes subsequent to placement on magnitude of collapse potential	73
5.6	Time dependency	75
5.7	Identification of collapse potential	75
5.8	Buildings damaged by collapse compression	76

6	Boundaries and variable depth	78
6.1	Influence of fill properties	79
6.2	Influence of fill geometry	79
6.3	Vertical highwall	80
6.4	Buried highwall	81
6.5	Long shallow slope	82
6.6	Exclusion zones	83

7	Investigation and monitoring	84
7.1	Objective	85
7.2	Ground investigation	85
7.3	Historical review	85
7.4	Site reconnaissance	86
7.5	Direct investigation	86
7.6	Laboratory tests	87
7.7	In-situ tests	87
7.8	Load tests	88
7.9	Geophysical tests	90
7.10	Monitoring	91

Part III: Construction on fills	95
8 Treatment of fills: proprietary compactive techniques	98
8.1 Dynamic compaction	98
8.2 Rapid impact compaction	103
8.3 Impact rolling	107
8.4 Explosive compaction	111
9 Treatment of fills: proprietary penetrative and other techniques	112
9.1 Vibro stone columns	112
9.2 Vibro-compaction	121
9.3 Vibro concrete columns	122
9.4 Chemical stabilisation	123
9.5 Reinforcement	124
9.6 Composite methods	124
10 Treatment of fills: non-proprietary techniques	125
10.1 Preloading with a surcharge of fill	125
10.2 Preloading by lowering the groundwater table	129
10.3 Vacuum preloading	130
10.4 Pre-inundation	131
10.5 Drainage	133
10.6 Remedial strategies for contaminated fill	133
11 Engineered fill	138
11.1 Types of specification	139
11.2 Site investigation	140
11.3 Fill categories	141
11.4 End-product criteria	141
11.5 Site preparation and fill placement	143
11.6 Quality management	145
11.7 Excavation and re-compaction	146
12 Foundations on fills	148
12.1 Differential movement	149
12.2 Distortion and associated damage	152
12.3 Tilt	154
12.4 Classification of potential movement	157
12.5 Shallow foundations	159
12.6 Deep foundations	160
12.7 Implications of ground chemistry	161

Part IV: Performance of fills	165
13 Case histories: opencast mining backfill	167
1 Opencast mining backfill at Corby (A)	167
2 Opencast mining backfill at Corby (B)	168
3 Opencast mining backfill at Corby (C)	172
4 Opencast mining backfill at Horsley, Northumberland	174
5 Opencast mining backfill at Ilkeston	178
6 Opencast mining backfill at Tamworth	179
7 Opencast mining backfill at West Auckland	180
8 Opencast mining backfill near Edinburgh	181
9 Opencast mining backfill at Cannock	182
10 Opencast mining backfill at Rotherham	188
11 Opencast mining backfill at Whitburn, West Lothian	191
14 Case histories: colliery spoil	193
12 Colliery spoil at Coalville (A)	193
13 Colliery spoil at Coalville (B)	195
14 Colliery spoil at Methil	196
15 Colliery spoil at Mansfield	197
15 Case histories: pre-1965 domestic refuse	199
16 Old domestic refuse at Redditch (A)	199
17 Old refuse in the east end of London	201
18 Old domestic refuse at trunk road widening in Hertfordshire	202
19 Old domestic refuse at Redditch (B)	203
20 Old refuse at Liverpool (A)	205
16 Case histories: post-1965 landfill	208
21 Post-1965 landfill at Brogborough	208
22 Post-1965 landfill at Calvert	212
23 Post-1965 landfill at Stewartby	217
24 Post-1965 landfill at Bletchley	219
25 Post-1965 landfill are Arlesey	222
17 Case histories: urban fill	224
26 Urban fill at Greenwich	224
27 Urban fill at Manchester (A)	225
28 Urban fill at Bacup	226
29 Building wastes at Waterbeach	228
30 Infilled dock at Hull	230
31 Infilled dock at Liverpool (B)	231
32 Clay fill in former gravel pit at Abingdon	232
33 Slag bank at Hartlepool	234
34 Lagoon PFA at Peterborough	235
35 Alluvial sand deposit at Manchester (B)	237

18	Building development on fills	238
18.1	Building development on shallow and medium-depth treated fill	238
18.2	Building development on deep treated fill	239
18.3	Building development on engineered fill	242

Appendices **245**

A	Building Research Station Digest 9	246
B	Stress distribution below building foundations	251
C	Settlement of foundations calculated using elastic theory	252
D	Delineation of an exclusion zone over a highwall	254
E	Effectiveness of field compaction by impact loading	259
F	Analysis of stone columns under widespread load	262
G	Model specification for engineered fill	265
