

# **Soil and Rock Description in Engineering Practice**

**David Norbury**

Consultant; Director, David Norbury Limited, Reading, UK  
Honorary Professor in Engineering Geology, University of Sussex, UK

**WHITTLES PUBLISHING**

# Contents

Preface	vii
Definitions	ix
1 Introduction	1
1.1 What are we describing and why?	5
1.2 Description compared with classification	9
1.3 Communication in description	11
1.4 Soil meets rock	13
1.5 Health and Safety in description	15
2 History of Description in Codification	18
2.1 Prior to 1970	18
2.2 The period 1970–1981	18
2.3 The period 1981–1999 and the first BS 5930	24
2.4 Rock weathering	27
2.5 1999 and the second BS 5930	30
2.6 The period since 1999	31
2.7 Multiple usage of defined terms	33
2.7.1 Clay and silt terminology	33
2.7.2 Secondary constituent terms	35
2.7.3 Loose and dense	35
2.7.4 Compactness of silt	35
2.7.5 Rock strength	35
2.7.6 Rock weathering	36
2.7.7 Comparison of descriptive terminology	36
3 Systematic Description	39
3.1 Standard word order	40
3.2 Standard word order in US practice	42
3.3 The multiple sentence approach	42
4 Description of Materials	45
4.1 Principal soil and rock types	45
4.2 Size fractions	47
4.3 Description procedure using flow chart	49
4.4 Very coarse soils	56
4.5 Coarse soils	59
4.6 Particle shape	61
4.7 The coarse soil/fine soil boundary	62
4.8 Fine soils	65
4.9 Classification of plasticity of fine soils	74
4.10 The soil/rock boundary	76
4.11 Rock naming	79

4.11.1	General naming of rocks	81
4.11.2	Description of coal	82
4.11.3	Naming of carbonate sediments	83
4.11.4	Naming of volcanoclastic sediments	86
4.12	Grain size in rocks	86
5	Relative Density and Strength	89
5.1	Relative density in coarse soils	89
5.2	Consistency of fine soils	92
5.3	Strength: shear or unconfined	96
6	Structure, Fabric and Texture	102
6.1	Structure	103
6.2	Fabric	103
6.3	Texture	107
7	Colour	109
8	Secondary and Tertiary Fractions	116
8.1	Secondary fractions	116
8.1.1	Secondary fractions in very coarse soils	116
8.1.2	Very coarse particles as a secondary fraction	118
8.1.3	Secondary fractions in coarse soils	121
8.1.4	Fine soil as a secondary constituent	126
8.1.5	Secondary fractions in fine soils	128
8.1.6	Multiple secondary fractions	129
8.2	Tertiary fractions	134
8.3	Description of widely graded soils	137
8.4	Description and classification of particle size grading	138
8.5	Other information	141
9	Geological Unit	144
10	Weathering	147
10.1	Weathering of soils	147
10.2	Rock weathering	150
10.3	Approach 1: description of weathering	153
10.4	Approaches 2 and 3: classifications for homogeneous stronger rocks	154
10.5	Approach 4: classification for heterogeneous weaker rocks	155
10.6	Material specific weathering schemes	157
10.7	Approach 5: special cases	160
10.7.1	Chalk	161
10.7.2	Karstic limestone	166
10.7.3	Tropical weathering	169
11	Discontinuity Logging	172
11.1	Types of discontinuity	172
11.2	Discontinuity description	173
11.3	Orientation	174
11.4	Spacing	177
11.5	Persistence and termination	179

11.6	Surface form	180
11.7	Wall strength	182
11.8	Aperture and infilling	182
11.9	Seepage	184
11.10	Discontinuity sets	185
12	Discontinuity State Recording	188
12.1	Total core recovery	191
12.2	Solid core recovery	195
12.3	Rock quality designation	197
12.4	Fracture spacing	198
13	Low Density Soils	201
13.1	Organic soils	201
13.1.1	Topsoil	201
13.1.2	Peat	203
13.1.3	Transported mixtures of organic soils	215
13.2	Volcanic soils or rocks	216
13.3	Loess and brickearth	219
14	Anthropogenic Ground	221
14.1	Types of anthropogenic ground	222
14.2	Identification of anthropogenic ground	225
14.3	Odours	227
14.4	Definitions of some combustion products	227
14.5	Description of concrete or macadam	229
14.5.1	Aggregate content	231
14.5.2	Voids	232
14.5.3	Deleterious substances	233
14.5.4	Reinforcement	233
14.6	Pavement material types	233
14.7	Description of brickwork	234
14.8	Logging cores of manufactured materials	236
15	Classification Schemes	238
15.1	Classification according to EN ISO	241
15.2	International classification systems	241
15.3	Classification systems taking account of engineering properties	247
15.4	European earthworks classification	253
15.5	Rock classification and rating schemes	253
16	The Description Process – Boreholes	255
16.1	The approach to description	256
16.2	Logging equipment and the toolbox	257
16.3	Description of samples and cores	259
16.4	Check logging	264
16.5	Photography of samples and cores	265
16.6	Testing and sampling	270
16.7	Compilation of field log	271
16.8	Checking against test results	275
16.9	Editing the field log to completion	276

17	Description Process – Field Exposures	279
17.1	Geological and geomorphological mapping	280
17.2	Field logging	280
17.3	Information to be recorded in exposure logging	283
17.4	Surveying	285
17.5	Safety	287
	Appendix: Pro-Forma Field Record Sheets	289
	References	299
	Index	305
