<i>Preface to the Third Edition</i>	vii
<i>Preface to the Second Edition</i>	xi
<i>Preface to the First Edition</i>	xv
<i>About the Author</i>	xix
Chapter 1. Crystal–Ambient Phase Equilibrium	1
1.1 Equilibrium of Infinitely Large Phases . . . . .	1
1.2 Supersaturation . . . . .	4
1.3 Equilibrium of Finite Phases . . . . .	8
1.3.1 Equation of Laplace . . . . .	9
1.3.2 Equation of Thomson–Gibbs . . . . .	11
1.4 Equilibrium Shape of Crystals . . . . .	14
1.4.1 Theorem of Gibbs–Curie–Wulff . . . . .	16
1.4.1.1 Crystal in a 3D medium . . . . .	16
1.4.1.2 Crystal on a surface . . . . .	20
Relation of Dupré . . . . .	20
Equilibrium Shape . . . . .	21
1.4.2 Polar diagram of the surface energy . . . . .	22
1.4.3 Herring’s formula . . . . .	26
1.4.4 Stability of crystal surfaces . . . . .	33
1.5 Atomistic Views on Crystal Growth . . . . .	39
1.5.1 Equilibrium of infinitely large crystal with the ambient phase — the concept of half-crystal position . . . . .	39

1.5.2	Equilibrium finite crystal–ambient phase — the concept of mean separation work . . . .	43
1.5.3	Equilibrium 2D crystal–ambient phase . . .	45
1.5.4	Equilibrium shape of crystals — atomistic approach . . . . .	46
1.5.5	Equilibrium vapor pressure of a 2D crystal on a foreign substrate . . . . .	48
1.6	Equilibrium Structure of Crystal Surfaces . . . . .	49
1.6.1	Classification of crystal surfaces . . . . .	49
1.6.2	Equilibrium structure of a step . . . . .	53
1.6.3	Equilibrium structure of F faces . . . . .	58
1.6.3.1	Model of Jackson . . . . .	61
1.6.3.2	Model of Temkin . . . . .	64
1.6.3.3	Criterion of Fisher and Weeks . . . . .	70
1.6.4	Kinetic roughness . . . . .	75
Chapter 2.	Nucleation	77
2.1	Thermodynamics . . . . .	77
2.1.1	Homogeneous formation of 3D nuclei . . . . .	80
2.1.2	Heterogeneous formation of 3D nuclei . . . . .	85
2.1.3	Heterogeneous formation of elastically strained 3D nuclei . . . . .	92
2.1.4	Formation of 2D nuclei . . . . .	98
2.1.5	Mode of nucleation on a foreign substrate . . .	101
2.2	Rate of Nucleation . . . . .	105
2.2.1	General formulation . . . . .	105
2.2.2	The equilibrium state . . . . .	108
2.2.3	Steady-state nucleation rate . . . . .	111
2.2.4	Nucleation of liquids from vapors . . . . .	115
2.2.5	Statistical contributions . . . . .	117
2.2.6	Nucleation from solutions and melts . . . . .	118
2.2.7	Rate of heterogeneous nucleation . . . . .	124
2.2.8	Rate of 2D nucleation . . . . .	126
2.2.8.1	Rate of 2D nucleation from vapors . . . . .	127

2.2.8.2	Rate of 2D nucleation from solutions . . . . .	127
2.2.8.3	Rate of 2D nucleation in melts . . . . .	128
2.2.9	Atomistic theory of nucleation . . . . .	129
2.2.9.1	The equilibrium state . . . . .	131
2.2.9.2	Steady-state nucleation rate . . . . .	135
2.2.10	Nonsteady state nucleation . . . . .	143
2.2.11	Mass crystallization and saturation nucleus density . . . . .	154
2.2.12	Ostwald's step rule . . . . .	173
Chapter 3. Crystal Growth		181
3.1	Normal Growth of Rough Crystal Faces . . . . .	182
3.2	Layer Growth of Flat Faces . . . . .	189
3.2.1	Rate of advance of steps . . . . .	192
3.2.1.1	Growth from vapor phase . . . . .	193
	Elementary Processes on Crystal Surfaces . . . . .	193
	Kinetic Coefficient of a Step . . . . .	195
	Rate of Advance of a Single Step . . . . .	197
	Rate of Advance of a Train of Parallel Steps . . . . .	202
	Rate of Advance of Curved Steps . . . . .	204
3.2.1.2	Growth from solutions . . . . .	207
	Rate of Advance of a Single Step . . . . .	210
	Rate of Advance of a Step in a Train of Steps . . . . .	211
3.2.1.3	Growth from melts . . . . .	214
3.2.2	Spiral growth of F faces . . . . .	216
3.2.2.1	Shape of the growth spiral . . . . .	217
3.2.2.2	Growth from a vapor phase . . . . .	223
	The Back Stress Effect . . . . .	226

	3.2.2.3	Growth in solutions . . . . .	229
	3.2.2.4	Growth in melts . . . . .	231
3.2.3		Growth by 2D nucleation . . . . .	231
	3.2.3.1	Constant rates of nucleation and step advance . . . . .	232
		Layer-by-layer Growth . . . . .	232
		Multilayer Growth . . . . .	235
	3.2.3.2	Time-dependent rates of nucle- ation and step advance . . . . .	241
		Polynuclear Layer-by-layer Growth . . . . .	244
		Multilayer growth — Simulta- neous Growth of Two Monolayers . . . . .	252
		Simultaneous Growth of Arbi- trary Number of Monolayers .	256
3.3		Some Particular Cases of Crystal Growth . . . . .	262
	3.3.1	Growth of nanowires by vapor–liquid–solid mechanism . . . . .	262
	3.3.2	Growth of Si(001) vicinal surface — influence of surface anisotropy . . . . .	276
		3.3.2.1 Dimer’s structure . . . . .	279
		3.3.2.2 Structure and energy of steps . . .	280
		3.3.2.3 Ground state of vicinal Si(100) surfaces . . . . .	288
		3.3.2.4 Anisotropy of surface diffusion coefficient . . . . .	291
		3.3.2.5 Theory of 1D nucleation . . . . .	293
		3.3.2.6 Rate of step advance by 1D nucleation . . . . .	300
		3.3.2.7 Growth of Si(001) vicinal by step flow . . . . .	301
3.4		Ehrlich–Schwoebel Barrier and its Consequences . .	305
	3.4.1	Ehrlich–Schwoebel effect on step-flow . . . .	311
		3.4.1.1 Bunching and debunching of steps	311
		3.4.1.2 Bales–Zangwill instability . . . . .	314

3.4.2	Ehrlich–Schwoebel effect on 2D nucleation . . . . .	317
3.4.2.1	Second-layer nucleation . . . . .	317
3.4.2.2	Step kinetics . . . . .	326
3.5	Kinematic Theory of Crystal Growth . . . . .	329
3.6	A Classical Experiment in Crystal Growth . . . . .	341
Chapter 4. Epitaxial Growth . . . . .		361
4.1	Basic Concepts and Definitions . . . . .	361
4.2	Structure and Energy of Epitaxial Interfaces . . . . .	369
4.2.1	Boundary region . . . . .	369
4.2.2	Models of epitaxial interfaces . . . . .	371
4.2.3	Misfit dislocations . . . . .	374
4.2.4	Frank–van der Merwe model of thin overlayer . . . . .	377
4.2.4.1	Interatomic potentials . . . . .	378
4.2.4.2	Interfacial interactions . . . . .	383
4.2.4.3	1D model of epitaxial interface . . . . .	385
Description of the Model . . . . .	385	
Single Dislocations. . . . .	391	
Sequence of Dislocations . . . . .	394	
Strains . . . . .	395	
Energy . . . . .	396	
Energy of Interaction of MDs . . . . .	399	
Limit of Stability of the Pseudomorphous State . . . . .	399	
Equilibrium of Chain with Finite Length . . . . .	399	
Limit of Metastability . . . . .	401	
4.2.4.4	2D model of Frank and van der Merwe . . . . .	402
4.2.4.5	Comparison of 2D and 1D models . . . . .	410
4.2.4.6	Application of 1D model to thick- ening overlayer . . . . .	412
4.2.5	1D model with non-Hookean interatomic forces . . . . .	414
4.2.6	van der Merwe model of thick overgrowth . . . . .	422

4.2.7	Thickening overgrowth . . . . .	430
4.2.8	The volterra approach . . . . .	436
4.3	Mechanism of Growth of Epitaxial Films . . . . .	440
4.3.1	Classification of the growth modes . . . . .	440
4.3.2	Experimental evidence . . . . .	446
4.3.2.1	Metals on insulators . . . . .	446
4.3.2.2	Metals on metals . . . . .	447
4.3.2.3	Metals on semiconductors . . . . .	449
4.3.2.4	Semiconductors on semiconductors . . . . .	450
	Effect of Surfactants . . . . .	452
4.3.3	General tendencies . . . . .	454
4.3.4	Thermodynamics of epitaxy . . . . .	454
4.3.4.1	Wetting and clustering . . . . .	455
4.3.4.2	Relation of Dupré for misfitting crystals . . . . .	459
4.3.4.3	Thickness variation of chemical potential . . . . .	462
4.3.4.4	Thermodynamic criterion of the growth mode . . . . .	472
4.3.5	Kinetics of growth of thin epitaxial films . . . . .	474
4.3.5.1	Mechanism of 2D–3D transformation . . . . .	474
4.3.5.2	Kinetics of 2D–3D transformation . . . . .	479
4.3.5.3	Critical temperature for 2D–3D transition . . . . .	486
4.3.6	Surfactants in epitaxial growth . . . . .	493
4.3.6.1	Thermodynamic considerations . . . . .	494
	Chemical Potential of a Bulk Crystal . . . . .	494
	Chemical Potential of a Thin Film . . . . .	496
	Thermodynamic Effect of Surfactants . . . . .	497

4.3.6.2	Kinetics . . . . .	499
	Effect of Surfactant on 2D	
	Nucleation . . . . .	500
	Attachment–Detachment	
	Kinetics . . . . .	506
	Exchange–De-exchange Kinetics	510
Chapter 5.	The Shoulders on Which We Stand	519
5.1	J. W. Gibbs . . . . .	520
5.2	G. Wulff . . . . .	526
5.3	M. Volmer . . . . .	528
5.4	Ya. I. Frenkel . . . . .	531
5.5	I. N. Stranski . . . . .	534
5.6	R. Kaischew . . . . .	542
5.7	L. Krastanov . . . . .	548
5.8	F. C. Frank . . . . .	552
5.9	N. Cabrera . . . . .	557
5.10	Ya. B. Zeldovich . . . . .	562
5.11	J. H. van der Merwe . . . . .	568
	<i>Appendix A. Units, Conversion Factors and Constants</i>	573
