International Steam Tables

Properties of Water and Steam based on
the Industrial Formulation IAPWS-IF97

3rd Edition

Tables, Algorithms, and Diagrams

All of the equations of IAPWS-IF97 including a complete set of
supplementary backward equations for fast calculations of heat
cycles, boilers, and steam turbines

Contents

Nomenclature	XVII
Introduction	1
 Part A	
Equations for the Calculation of the Thermophysical Properties of Water and Steam	3
1 Reference Constants	5
2 IAPWS Industrial Formulation 1997 for the Thermodynamic Properties of Water and Steam	7
2.1 Characteristic Features of IAPWS-IF97	7
2.1.1 Structure of IAPWS-IF97	8
2.1.2 Quality of IAPWS-IF97	9
2.2 Basic Equations of IAPWS-IF97	11
2.2.1 Auxiliary Equation for the Boundary between Regions 2 and 3	12
2.2.2 Basic Equation for Region 1	13
2.2.3 Basic Equation and Supplementary Equation for Region 2	15
2.2.3.1 Basic Equation	16
2.2.3.2 Supplementary Equation for the Metastable-Vapour Region	20
2.2.4 Basic Equation for Region 3	22
2.2.5 Basic Equations for Region 4	25
2.2.5.1 Saturation-Pressure Equation	25
2.2.5.2 Saturation-Temperature Equation	26
2.2.6 Basic Equation for Region 5	27
2.3 Backward Equations of IAPWS-IF97	30
2.3.1 Survey and Important Annotations	30
2.3.1.1 Survey on All Types of Backward Equations	30
2.3.1.2 Important Annotations on the Use of the Backward Equations	32
2.3.2 Requirements for the Numerical Consistencies between Backward Equations, Backward Functions, and Basic Equation	33
2.3.3 Backward Equations as a Function of the Input Variables (p, h)	36
2.3.3.1 Regions and Region Boundaries in the Variables (p, h)	37
2.3.3.2 Backward Equation $T(p, h)$ for Region 1	41
2.3.3.3 Backward Equations $T(p, h)$ for Region 2	42

2.3.3.4	Backward Equations $v(p, h)$ and $T(p, h)$ for Region 3	47
2.3.4	Backward Equations as a Function of the Input Variables (p, s)	53
2.3.4.1	Regions and Region Boundaries in the Variables (p, s)	53
2.3.4.2	Backward Equation $T(p, s)$ for Region 1	57
2.3.4.3	Backward Equations $T(p, s)$ for Region 2	59
2.3.4.4	Backward Equations $v(p, s)$ and $T(p, s)$ for Region 3	63
2.3.5	Backward Equations and Backward Functions Dependent on the Input Variables (h, s)	68
2.3.5.1	Regions and Region Boundaries in the Variables (h, s)	70
2.3.5.2	Equations for Region Boundaries in the Variables (h, s)	80
2.3.5.3	Backward Equation $p(h, s)$ and Backward Function $T(h, s)$ for Region 1	87
2.3.5.4	Backward Equations $p(h, s)$ and Backward Functions $T(h, s)$ for Region 2	90
2.3.5.5	Backward Equations $p(h, s)$ and Backward Functions $v(h, s)$ and $T(h, s)$ for Region 3	95
2.3.5.6	Backward Equation $T_s(h, s)$ and Backward Functions $p_s(h, s)$ and $x(h, s)$ for the Technically Important Part of the Two-Phase Region 4	101
2.3.6	Backward Equations Dependent on the Input Variables (p, T) for Region 3	105
2.3.6.1	Numerical Consistency Requirements	106
2.3.6.2	Range of Validity of the Backward and Auxiliary Equations	107
2.3.6.3	Division of Region 3 into Subregions 3a to 3t and the Subregion-Boundary Equations	108
2.3.6.4	Backward Equations $v(p, T)$ for Subregions 3a to 3t	113
2.3.6.5	Auxiliary Equations $v(p, T)$ for the Near-Critical Region	126
2.3.7	Summarizing Statements on the Calculation Speed when Using Backward and Region-Boundary Equations	133
2.3.7.1	Computing-Time Ratios for Calculations with Basic Equations via Iterations in Comparison with the Use of Backward and Region-Boundary Equations	133
2.3.7.2	Computing-Time Ratios for Iterations with Basic Equations Using Single Fixed Values or Values from Backward Equations as Starting Points	135
2.4	Partial Derivatives of Thermodynamic Properties Using IAPWS-IF97	136
2.4.1	Partial Derivatives Based on the Basic Equations for Regions 1, 2, and 5	137
2.4.2	Partial Derivatives Based on the Basic Equation for Region 3	138
2.4.3	Example for Deriving Any Partial Derivative from the Basic Equations	138
2.4.3.1	Example for Deriving the Partial Derivative $(\partial u / \partial p)_v$ for Regions 1, 2, and 5	138

2.4.3.2 Example for the Derivation of the Partial Derivative ($\partial u/\partial p$) _v for Region 3	139
2.4.4 The Calculation of Any Partial Derivative Using the Tables in Part B, the “Steam Properties Calculator,” or the Apps “International Steam Tables”	140
2.4.4.1 The Calculation of Any Partial Derivative Using the Tables in Part B	141
2.4.4.2 The Calculation of Any Partial Derivative Using the “Steam Properties Calculator,” or the Apps “International Steam Tables” .	142
2.5 Uncertainties of IAPWS-IF97	143
2.5.1 Uncertainties in the Properties Specific Volume, Specific Isobaric Heat Capacity, Speed of Sound, and Saturation Pressure	144
2.5.2 Uncertainties in the Properties Specific Enthalpy, Enthalpy Differences, and Enthalpy of Vaporization	146
2.5.3 Consistencies at Boundaries between Single-Phase Regions	150
3 Equations for Transport Properties and Other Properties	151
3.1 Equation for the Viscosity for Industrial Use	151
3.2 Equation for the Thermal Conductivity for Industrial Use	155
3.3 Equation for the Surface Tension	160
3.4 Equation for the Dielectric Constant	161
3.5 Equation for the Refractive Index	163
References	167
 Part B	
Tables of the Properties of Water and Steam	171
Table 1 Saturation state (Temperature table)	173
Table 2 Saturation state (Pressure table)	185
Table 3 Single-phase region (0 °C to 800 °C)	191
Table 4 High-temperature region (800 °C to 2000 °C)	253
Table 5 Ideal-gas state	267
Table 6 Saturation state: Compression factor z , Specific isochoric heat capacity c_v , Isobaric cubic expansion coefficient α_v , Isothermal compressibility κ_T	271
Table 7 Compression factor z	275
Table 8 Specific isochoric heat capacity c_v	279
Table 9 Isobaric cubic expansion coefficient α_v	283
Table 10 Isothermal compressibility κ_T	287
Table 11 Saturation state: Kinematic viscosity ν , Prandtl number Pr , Thermal diffusi- vity a , Dielectric constant ϵ	291
Table 12 Kinematic viscosity ν	295

Table 13	Prandtl number Pr	299
Table 14	Thermal diffusivity a	303
Table 15	Dielectric constant ε	307
Table 16	Refractive index n (Saturation state)	311
Table 17	Refractive index n	313
Table 18	Saturation state: Relative pressure coefficient α_p , Isothermal stress coefficient β_p , Fugacity f^*	319
Table 19	Relative pressure coefficient α_p	323
Table 20	Isothermal stress coefficient β_p	327
Table 21	Fugacity f^*	331
Table 22	Saturation state: Joule-Thomson coefficient μ , Isothermal throttling coefficient δ_T , Surface tension σ	335
Table 23	Joule-Thomson coefficient μ	339
Table 24	Isothermal throttling coefficient δ_T	343

Part C

Diagrams of the Properties of Water and Steam	347
Overview Diagrams	349
Diagram 1 Molier h - s diagram	350
Diagram 2 T - s diagram	351
Diagram 3 $\log(p)$ - h diagram	352
Pressure-Temperature Diagrams with Lines of Constant Properties	353
Diagram 4 Specific volume v	354
Diagram 5 Density ρ	355
Diagram 6 Compression factor z	356
Diagram 7 Specific enthalpy h	357
Diagram 8 Specific internal energy u	358
Diagram 9 Specific entropy s	359
Diagram 10 Specific Gibbs free energy g	360
Diagram 11 Specific Helmholtz free energy f	361
Diagram 12 Specific isobaric heat capacity c_p	362
Diagram 13 Specific isochoric heat capacity c_v	363
Diagram 14 Speed of sound w	364
Diagram 15 Isentropic exponent κ	365
Diagram 16 Isobaric cubic expansion coefficient α_v	366
Diagram 17 Isothermal compressibility κ_T	367
Diagram 18 Relative pressure coefficient α_p	368
Diagram 19 Isothermal stress coefficient β_p	369
Diagram 20 Joule-Thomson coefficient μ	370
Diagram 21 Isothermal throttling coefficient δ_T	371
Diagram 22 Fugacity f^*	372
