Table of Contents

Preface	xiii
1 Introduction	1
1.1 Introduction	1
1.2 Thermoelectric Effect	3
1.2.1 Seebeck Effect	3
1.2.2 Peltier Effect	3
1.2.3 Thomson Effect	4
1.2.4 Thomson (or Kelvin) Relationships	4
1.3 The Figure of Merit	4
1.3.1 New-Generation Thermoelectrics	5
Problems	7
References	7
2 Thermoelectric Generators	8
2.1 Ideal Equations	8
2.2 Performance Parameters of a Thermoelectric Module	11
2.3 Maximum Parameters for a Thermoelectric Module	12
2.4 Normalized Parameters	13
Example 2.1 Exhaust Waste Heat Recovery	15
2.5 Effective Material Properties	17
2.6 Comparison of Calculations with a Commercial Product	18
Problems	19
Computer Assignment	21
References	22
3 Thermoelectric Coolers	23
3.1 Ideal Equations	23
3.2 Maximum Parameters	26
3.3 Normalized Parameters	27
Example 3.1 Thermoelectric Air Conditioner	29
3.4 Effective Material Properties	33
3.4.1 Comparison of Calculations with a Commercial Product	34
Problems	36
Reference	37

4	Optimal Design	38
4.1	Introduction	38
4.2	Optimal Design for Thermoelectric Generators	38
Example 4.1	Exhaust Thermoelectric Generators	46
4.3	Optimal Design of Thermoelectric Coolers	49
Example 4.2	Automotive Thermoelectric Air Conditioner	57
	Problems	61
	References	63
5	Thomson Effect, Exact Solution, and Compatibility Factor	64
5.1	Thermodynamics of Thomson Effect	64
5.2	Exact Solutions	68
	5.2.1 <i>Equations for the Exact Solutions and the Ideal Equation</i>	68
	5.2.2 <i>Thermoelectric Generator</i>	70
	5.2.3 <i>Thermoelectric Coolers</i>	71
5.3	Compatibility Factor	71
5.4	Thomson Effects	79
	5.4.1 <i>Formulation of Basic Equations</i>	79
	5.4.2 <i>Numeric Solutions of Thomson Effect</i>	83
	5.4.3 <i>Comparison between Thomson Effect and Ideal Equation</i>	85
	Problems	87
	Projects	88
	References	88
6	Thermal and Electrical Contact Resistances for Micro and Macro Devices	89
6.1	Modeling and Validation	89
6.2	Micro and Macro Thermoelectric Coolers	92
6.3	Micro and Macro Thermoelectric Generators	94
	Problems	97
	<i>Computer Assignment</i>	97
	References	98
7	Modeling of Thermoelectric Generators and Coolers With Heat Sinks	99
7.1	Modeling of Thermoelectric Generators With Heat Sinks	99
7.2	Plate Fin Heat Sinks	108
7.3	Modeling of Thermoelectric Coolers With Heat Sinks	111
	Problems	119
	References	119
8	Applications	120
8.1	Exhaust Waste Heat Recovery	120
	8.1.1 <i>Recent Studies</i>	120
	8.1.2 <i>Modeling of Module Tests</i>	122
	8.1.3 <i>Modeling of a TEG</i>	126
	8.1.4 <i>New Design of a TEG</i>	133
8.2	Solar Thermoelectric Generators	138
	8.2.1 <i>Recent Studies</i>	138
	8.2.2 <i>Modeling of a STEG</i>	138
	8.2.3 <i>Optimal Design of a STEG (Dimensional Analysis)</i>	144
	8.2.4 <i>New Design of a STEG</i>	146

8.3	Automotive Thermoelectric Air Conditioner	149
	8.3.1 <i>Recent Studies</i>	149
	8.3.2 <i>Modeling of an Air-to-Air TEAC</i>	150
	8.3.3 <i>Optimal Design of a TEAC</i>	157
	8.3.4 <i>New Design of a TEAC</i>	160
	Problems	162
	References	163
9	Crystal Structure	164
9.1	Atomic Mass	164
	9.1.1 <i>Avogadro's Number</i>	164
	Example 9.1 Mass of One Atom	164
9.2	Unit Cells of a Crystal	165
	9.2.1 <i>Bravais Lattices</i>	166
	Example 9.2 Lattice Constant of Gold	169
9.3	Crystal Planes	170
	Example 9.3 Indices of a Plane	171
	Problems	171
10	Physics of Electrons	172
10.1	Quantum Mechanics	172
	10.1.1 <i>Electromagnetic Wave</i>	172
	10.1.2 <i>Atomic Structure</i>	174
	10.1.3 <i>Bohr's Model</i>	174
	10.1.4 <i>Line Spectra</i>	176
	10.1.5 <i>De Broglie Wave</i>	177
	10.1.6 <i>Heisenberg Uncertainty Principle</i>	178
	10.1.7 <i>Schrödinger Equation</i>	178
	10.1.8 <i>A Particle in a One-Dimensional Box</i>	179
	10.1.9 <i>Quantum Numbers</i>	181
	10.1.10 <i>Electron Configurations</i>	183
	Example 10.1 Electronic Configuration of a Silicon Atom	184
10.2	Band Theory and Doping	185
	10.2.1 <i>Covalent Bonding</i>	185
	10.2.2 <i>Energy Band</i>	186
	10.2.3 <i>Pseudo-Potential Well</i>	186
	10.2.4 <i>Doping, Donors, and Acceptors</i>	187
	Problems	188
	References	188
11	Density of States, Fermi Energy, and Energy Bands	189
11.1	Current and Energy Transport	189
11.2	Electron Density of States	190
	11.2.1 <i>Dispersion Relation</i>	190
	11.2.2 <i>Effective Mass</i>	190
	11.2.3 <i>Density of States</i>	191

11.3	Fermi-Dirac Distribution	193
11.4	Electron Concentration	194
11.5	Fermi Energy in Metals	195
Example 11.1	Fermi Energy in Gold	196
11.6	Fermi Energy in Semiconductors	197
Example 11.2	Fermi Energy in Doped Semiconductors	198
11.7	Energy Bands	199
	11.7.1 Multiple Bands	200
	11.7.2 Direct and Indirect Semiconductors	200
	11.7.3 Periodic Potential (Kronig-Penney Model)	201
	Problems	205
	References	205
12	Thermoelectric Transport Properties for Electrons	206
12.1	Boltzmann Transport Equation	206
12.2	Simple Model of Metals	208
	12.2.1 Electric Current Density	208
	12.2.2 Electrical Conductivity	208
Example 12.1	Electron Relaxation Time of Gold	210
	12.2.3 Seebeck Coefficient	210
Example 12.2	Seebeck Coefficient of Gold	212
	12.2.4 Electronic Thermal Conductivity	212
Example 12.3	Electronic Thermal Conductivity of Gold	213
12.3	Power-Law Model for Metals and Semiconductors	213
	12.3.1 Equipartition Principle	214
	12.3.2 Parabolic Single-Band Model	215
Example 12.4	Seebeck Coefficient of PbTe	217
Example 12.5	Material Parameter	221
12.4	Electron Relaxation Time	222
	12.4.1 Acoustic Phonon Scattering	222
	12.4.2 Polar Optical Phonon Scattering	222
	12.4.3 Ionized Impurity Scattering	223
Example 12.6	Electron Mobility	223
12.5	Multiband Effects	224
12.6	Nonparabolicity	225
	Problems	228
	References	229
13	Phonons	230
13.1	Crystal Vibration	230
	13.1.1 One Atom in a Primitive Cell	230
	13.1.2 Two Atoms in a Unit Cell	232
13.2	Specific Heat	234
	13.2.1 Internal Energy	234
	13.2.2 Debye Model	235
Example 13.1	Atomic Size and Specific Heat	239

13.3	Lattice Thermal Conductivity	241
	13.3.1 <i>Klemens-Callaway Model</i>	241
	13.3.2 <i>Umklapp Processes</i>	244
	13.3.3 <i>Callaway Model</i>	244
	13.3.4 <i>Phonon Relaxation Times</i>	245
Example 13.2	Lattice Thermal Conductivity	247
	Problems	249
	References	250
14	Low-Dimensional Nanostructures	251
14.1	Low-Dimensional Systems	251
	14.1.1 <i>Quantum Well (2D)</i>	251
Example 14.1	Energy Levels of a Quantum Well	255
	14.1.2 <i>Quantum Wires (1D)</i>	256
	14.1.3 <i>Quantum Dots (0D)</i>	258
	14.1.4 <i>Thermoelectric Transport Properties of Quantum Wells</i>	260
	14.1.5 <i>Thermoelectric Transport Properties of Quantum Wires</i>	261
	14.1.6 <i>Proof-of-Principle Studies</i>	263
	14.1.7 <i>Size Effects of Quantum Well on Lattice Thermal Conductivity</i>	264
	Problems	267
	References	267
15	Generic Model of Bulk Silicon and Nanowires	268
15.1	Electron Density of States for Bulk and Nanowires	268
	15.1.1 <i>Density of States</i>	268
15.2	Carrier Concentrations for Two-band Model	269
	15.2.1 <i>Bulk</i>	269
	15.2.2 <i>Nanowires</i>	269
	15.2.3 <i>Bipolar Effect and Fermi Energy</i>	269
15.3	Electron Transport Properties for Bulk and Nanowires	270
	15.3.1 <i>Electrical Conductivity</i>	270
	15.3.2 <i>Seebeck Coefficient</i>	270
	15.3.3 <i>Electronic Thermal Conductivity</i>	270
15.4	Electron Scattering Mechanisms	271
	15.4.1 <i>Acoustic-Phonon Scattering</i>	271
	15.4.2 <i>Ionized Impurity Scattering</i>	272
	15.4.3 <i>Polar Optical Phonon Scattering</i>	272
15.5	Lattice Thermal Conductivity	273
15.6	Phonon Relaxation Time	273
15.7	Input Data for Bulk Si and Nanowires	275
15.8	Bulk Si	275
	15.8.1 <i>Fermi Energy</i>	275
	15.8.2 <i>Electron Mobility</i>	275
	15.8.3 <i>Thermoelectric Transport Properties</i>	275
	15.8.4 <i>Dimensionless Figure of Merit</i>	276
15.9	Si Nanowires	276
	15.9.1 <i>Electron Properties</i>	276
	15.9.2 <i>Phonon Properties for Si Nanowires</i>	280
	Problems	282
	References	284

16	Theoretical Model of Thermoelectric Transport Properties	286
16.1	Introduction	286
16.2	Theoretical Equatons	287
	16.2.1 <i>Carrier Transport Properties</i>	287
	16.2.2 <i>Scattering Mechanisms for Electron Relaxation Times</i>	290
	16.2.3 <i>Lattice Thermal Conductivity</i>	293
	16.2.4 <i>Phonon Relaxation Times</i>	293
	16.2.5 <i>Phonon Density of States and Specific Heat</i>	295
	16.2.6 <i>Dimensionless Figure of Merit</i>	295
16.3	Results and Discussion	295
	16.3.1 <i>Electron or Hole Scattering Mechanisms</i>	295
	16.3.2 <i>Transport Properties</i>	299
16.4	Summary	315
	Problems	316
	References	316
Appendix A	Physical Properties	323
Appendix B	Optimal Dimensionless Parameters for TEGs with $ZT_{\infty 2} = 1$	353
Appendix C	ANSYS TEG Tutorial	365
Appendix D	Periodic Table	376
Appendix E	Thermoelectric Properties	391
Appendix F	Fermi Integral	399
Appendix G	Hall Factor	402
Appendix H	Conversion Factors	405
