Preface	vii
Historical Introduction	1
Chapter 1 A First Familiarization with Geometric Shapes:	
The Dense Packings	5
1.1 The Archimedian Polyhedra	5
1.2 From Polygons to Polyhedra for Some Chemistry	10
1.3 From Qualitative to Quantitative. Some Definitions	18
1.4 Simple Calculations on Dense Packings of Spheres	22
1.4.1 Primitive cubic packing	22
1.4.2 The centered cubic packing	23
1.4.3 The face centered cubic packing	24
1.4.4 The hexagonal packing	26
1.5. Some Remarks	27
1.5.1 Parameters influencing the dimension of the particles	27
1.5.2 Non-ideal dense packings	27
1.5.3 Real solid versus ideal solid	29
1.5.4 Movements of particles	29
1.5.5 The chemical importance of the interstice concept	30
Chapter 2 Some Notions of Symmetry	35
2.1 The Direct Axial Symmetries	36
2.2 The Inverse Axial Symmetries	38
2.3 The Symmetries at the Atomic Scale	42
2.4 The Miller Indices	47
Chapter 3 The Projections Their Reading, Their Uses...	49
3.1 The Steps of the Examination	49
3.1.1 The drawing	49

3.1.2	Calculations of distances and coordinations	51
3.1.3	Connections of polyhedra	54
3.1.4	Dense packings and complex structures	55
3.2	The Principal Structure Types (Wyckoff, 1968)	57
3.2.1	The M_2X type ($M/X = 2$)	57
3.2.1.1	Li_2O (Fig. 3.7)	57
3.2.1.2	Cu_2O (Fig. 3.8)	58
3.2.2	The MX type ($M/X = 1$)	58
3.2.2.1	$NiAs$ (Fig. 3.9)	58
3.2.2.2	Wurtzite: The hexagonal variety of ZnS (Fig. 3.10)	59
3.2.2.3	Blende: The cubic variety of ZnS (Fig. 3.11)	60
3.2.3	The M_2X_3 type ($M/X = 0.66$)	61
3.2.3.1	$\alpha-Al_2O_3$ form (corundum) (Fig. 3.12)	61
3.2.3.2	$\beta-Ga_2O_3$ (Fig. 3.13)	62
3.2.4	The MX_2 type ($M/X = 0.50$)	64
3.2.5	The M_3X_4 , A_2MX_4 and AM_2X_4 types ($0.75 \geq M/X \geq 0.25$ if $A \neq M$)	65
3.2.5.1	$MgAl_2O_4$ (Fig. 3.15)	65
3.2.5.2	$LuFe_2O_4$ (Fig. 3.19)	69
3.2.5.3	K_2NiF_4 (Fig. 3.20)	70
3.2.6	The MX_3 type ($M/X = 0.33$)	71
3.2.6.1	ReO_3 (Fig. 3.21)	71
3.2.6.2	MX_3 hexagonal framework (Fig. 3.23)	74
3.2.6.3	The MX_3 pyrochlore type with a cubic framework (Fig. 3.24)	75
3.2.6.4	MoO_3 (Fig. 3.26)	78
3.2.6.5	$YBa_2Cu_3O_7$, the guest and its variants	79
3.3	The Concept of Vacancy; Its Limits with the Existence of Lone Pairs	82
3.4	Polyhedra, Connectivity and Formulation	85
3.5	True Coordination and the Bond Valence Method	91
Chapter 4	Some Disorder within Order! Tiltings, Vacancies and Supercells	95
4.1	Deformations of Polyhedra	96
4.2	Tilting of Polyhedra and Glazer's Notation	98
4.3	Cationic Ordering and Supercells	106
4.4	Vacancies, Extended Defects and Non-Stoichiometry	109
4.4.1	The extended defects	110
4.4.2	Ordered extended defects; examples	115

Chapter 5	Armatures, Gilders and Bricks!... Other Ways of Reading	
	a Structure	121
5.1	Nets	122
5.1.1	Flexible nets	124
5.1.2	Decorated nets	126
5.2	Rod Descriptions of Structures (O’Keeffe, 1992)	129
5.3	Building Units and Descriptions of Structures (Férey, 2000)	132
5.4	The “Spin” Descriptions of Structures	138
Chapter 6	The Structural Relations ... Their Deciphering	141
6.1	Structural Relations between the Polymorphs of a Solid	141
6.1.1	Mechanisms of anionic glidings	141
6.1.2	Mechanisms involving rotation of blocks	145
6.2	Structural Relations between Solids	
	with Different Formula	148
6.2.1	Cationic ordering in perovskites	148
6.2.1.1	Double perovskites with a 1:1 order on site M	149
6.2.1.2	Double perovskites with a 1:2 order on site M	151
6.2.1.3	Double perovskites with a 1:3 order on site M	151
6.2.1.4	Perovskites and cationic ordering on the A sites	152
6.2.1.5	Ordered complex perovskites (orders on both A and M sites)	152
6.2.2	Cationic ordering in spinels MM'_2O_4	153
6.2.3	Ordering between ions and vacancies	154
6.3	The Inverse Structures	158
6.4	Interconnection of Different Building Blocks	159
6.5	$A_n[A'_{m-1}M_mX_{3m+1}]$ Structural Recurrences in Oxides (Raveau <i>et al.</i> , 1991)	163
6.5.1	The Aurivillius phases	163
6.5.2	The Dion–Jacobson phases	165
6.5.3	The Ruddlesden–Popper phases	166
6.5.4	The structural recurrence in cuprates (Raveau <i>et al.</i> , 1991)	166
6.6	Structural Recurrence in Hexagonal Perovskites	174
6.7	Other Mechanisms of Intergrowth	177
6.8	Structural Evolutions Under Pressure	180

Chapter 7	Crystal Chemistry? A Tool for Creation... or...	
	The New Architects of Matter	185
	7.1 The Scale Up Concept: (Férey, 2000)	186
	7.1.1 Filling the topological polyhedron	190
	7.1.2 The hybrid building blocks	191
	7.1.3 The anionic substitution in the inorganic bricks	193
	7.1.4 Decoration of polyhedra and construction of the inorganic brick	195
	7.2 The Concepts of Connectivity and Augmented Nets	199
	7.3 From Concepts to Materials: The Different Steps	203
	7.3.1 The inorganic building blocks	204
	7.3.2 The pores and their occupation	204
	7.3.2.1 General considerations	204
	7.3.2.2 Applications	206
	7.3.3 From the solid to the multi-material	208
	Epilogue	211
	Appendix 1 The Geometrical Characteristics of Platonic and Archimedian Polyhedra	213
	Appendix 2 The Exponential Scale, or the Mathematical Nature of Polyhedra	239
	Bibliography	243
	Index	245
