Abstract	IV
Contents	V
Nomenclature	VII
1 Introduction	1
1.1 Magnesium – History and Overview	1
1.2 Lightweight Potential of Magnesium Alloys	2
1.3 Production and Application of Magnesium Sheet Metals	4
1.4 Motivation and Research Objective	6
2 Background and Literature Review	8
2.1 Crystal Structure of Magnesium	8
2.2 Deformation Mechanisms of Magnesium Alloys	9
2.2.1 Dislocation Slip	9
2.2.2 Mechanical Twinning	10
2.3 Magnesium Alloy Systems	13
2.4 Mechanical Behavior of Magnesium Alloys	17
2.4.1 Quasi-Static Mechanical Properties	17
2.4.2 Pseudoelasticity	20
2.4.3 Cyclic Deformation Behavior	22
2.5 Fundamentals of Fatigue Modeling	25
2.5.1 Local Strain Approach	28
2.5.2 Energy Based Approach	36
2.6 Fatigue of Magnesium Alloys – Overview	37
2.6.1 Uniaxial Tension-Compression Tests	37
2.6.2 Modeling of the Stress-Strain Behavior	41
3 Materials and Experimental Procedure	42
3.1 Investigated Magnesium Alloys	42
3.2 Microstructural Investigations	42
3.3 Specimens for Mechanical Tests	44
3.4 Quasi-Static Tests	45
3.5 Cyclic Tests	46
3.5.1 Test Procedure	46
3.5.2 Data Recording and Evaluation	48
3.5.3 Definition of the Fatigue Life	49
3.6 Overview of all Performed Mechanical Tests	50
4 Microstructure and Texture	53
4.1 Microstructure Before Loading	53
4.1.1 Sheet Metal Surface	53

4.1.2	Different Spatial Directions	54
4.2	Crystal Orientation Before Loading	55
5	Experimental Investigation of the Quasi-Static Behavior	59
5.1	General Observations	59
5.2	Stiffness and Microyielding	62
5.3	Influence of the Strain Rate	63
5.4	Twin Bands in Compressive Tests	64
5.5	Serrated Flow	67
6	Experimental Investigation of the Cyclic Deformation Behavior	69
6.1	Constant Amplitude Tests	70
6.1.1	Completely Reversed Stress- and Strain-Controlled Tests	70
6.1.2	Influence of the Anisotropy	73
6.1.3	Twin Bands at Cyclic Strain-Controlled Tests	74
6.1.4	Strain-Controlled Tests with Different Strain Ratios	77
6.1.5	Stress-Controlled Tests with Different Stress Ratios	79
6.1.6	Cyclic Hardening Behavior	83
6.1.7	Evolution of Fatigue Parameters	87
6.2	Variable Amplitude Tests	90
6.2.1	Load-Time Functions with Single Inner Hysteresis Loops	90
6.2.2	Cyclic Stress Relaxation	92
6.2.3	Load-Time Functions with Multiple Inner Hysteresis Loops	94
7	Uniaxial Phenomenological Stress-Strain Models	96
7.1	Correlation of the Masing Model	96
7.2	Phenomenological Stress-Strain Model for Wrought Magnesium Alloys	97
7.2.1	Mathematical Formulations	97
7.2.2	Description of the Simulation Code	102
7.2.3	Model Verification	107
8	Fatigue Life Evaluation Methods	112
8.1	General Fatigue Behavior	112
8.2	Fractographic Findings	114
8.3	Manson-Coffin-Basquin Approach and Smith-Watson-Topper Model	116
8.3.1	Strain-Life Curves of AM50, AZ31B, and ME21	116
8.3.2	Stress- and Strain-Based Mean Stress Correction Methods	118
8.4	Energy Based Fatigue Models	120
8.5	Fatigue Life at Variable Amplitude Tests	125
9	Summary and Outlook	129
